WeChat: cstutorcs

I. Introduction

Goals:

- ❖ get “feel” and terminology
- ❖ defer depth and detail to later in course
Assignment Project Exam Help
- ❖ understand concepts using the Internet as example
<https://tutorcs.com>

WeChat: cstutorcs

I. Introduction: roadmap

I.1 what *is* the Internet?

I.2 network edge

- end systems, access networks, links

Assignment Project Exam Help

I.3 network core

- packet switching, circuit switching, network structure

I.4 delay, loss, throughput in networks

I.5 protocol layers

I.6 networks under attack: security

I.7 history

Hobbe's Internet Timeline - <http://www.zakon.org/robert/internet/timeline/>

Quiz: What is the Internet?

- A. One single homogenous network
Assignment Project Exam Help
<https://tutorcs.com>
- B. An interconnection of different computer networks
https://tutorcs.com
- C. An infrastructure that provides services to
WeChat.ostutors networked applications
- D. Something else (answer in comments on Zeeting)

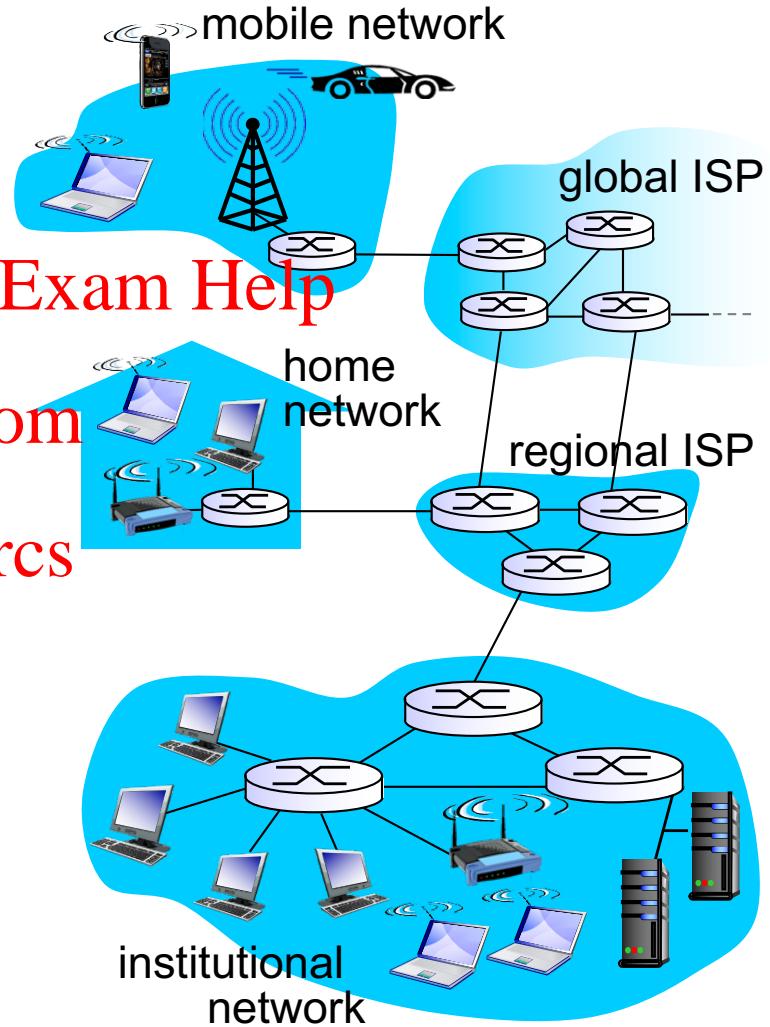

Answers: B and C are valid answers

Open a browser and type: www.zeetings.com/salil

What's the Internet: “nuts and bolts” view

- ❖ millions of connected computing devices:
 - *hosts = end systems*
 - running *network protocols*
- ❖ communication
 - fiber, copper, radio, satellite
 - transmission rate: *bandwidth*
- ❖ *Packet switches: forward packets (chunks of data)*
 - *routers and link layer switches*

“Fun” Internet appliances

Internet
refrigerator

Picture frame

sensorized,
bed
mattress

Networked TV Set top Boxes

<https://tutorcs.com>

WeChat: cstutorcs pacemaker

Web-enabled toaster +
weather forecaster

car

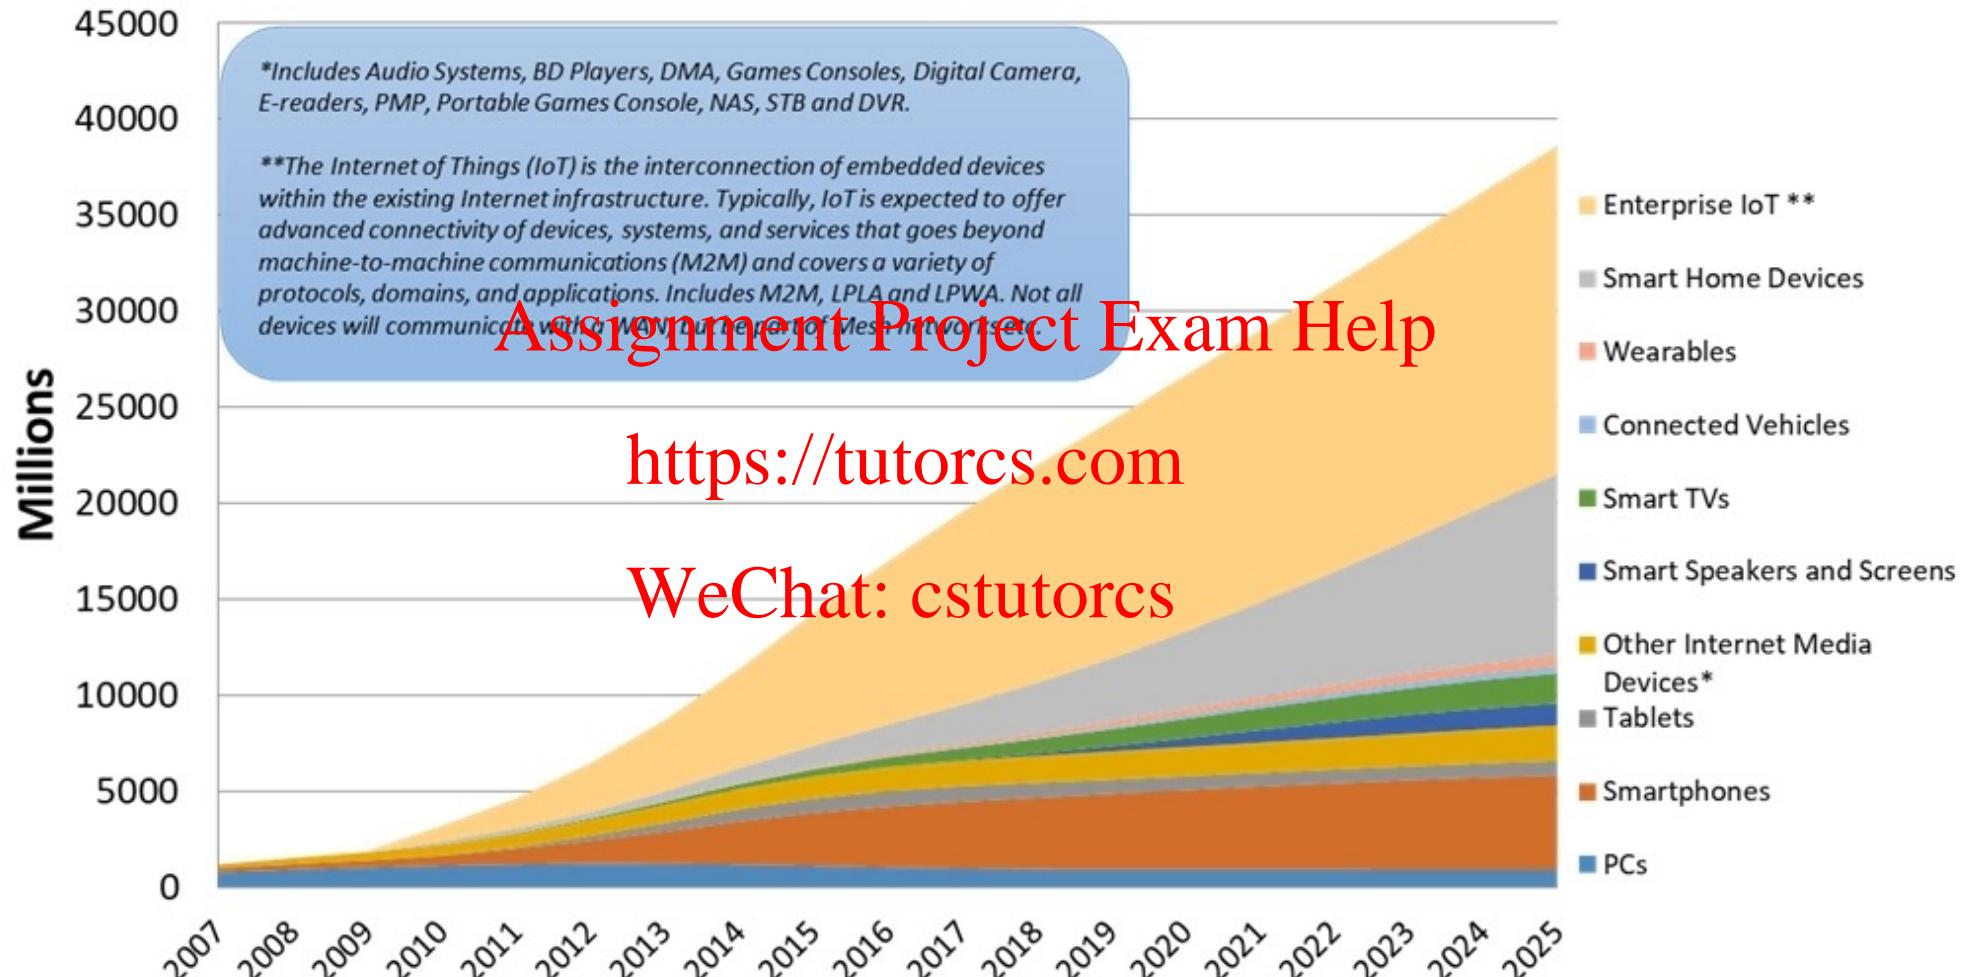

Tweet-a-watt:
monitor energy use

Smart Lightbulbs

Global Connected and IoT Device Installed Base Forecast

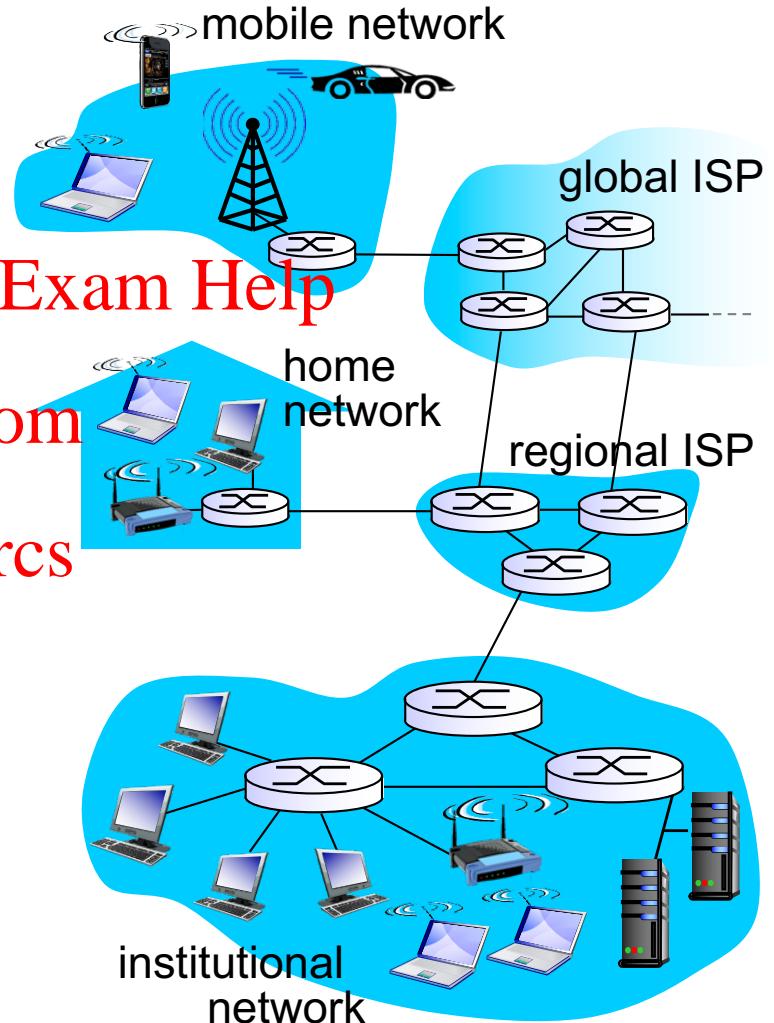

Source – Strategy Analytics research services, May 2019: IoT Strategies, Connected Home Devices, Connected Computing Devices, Wireless Smartphone Strategies, Wearable Device Ecosystem, Smart Home Strategies

What's the Internet: “nuts and bolts” view

- ❖ *Internet: “network of networks”*
 - Interconnected ISPs
- ❖ *protocols* control sending,
receiving of ~~Assignment Project Exam Help~~
~~WeChat: cstutorcs~~

 - e.g., TCP, IP, HTTP, Skype, 802.11

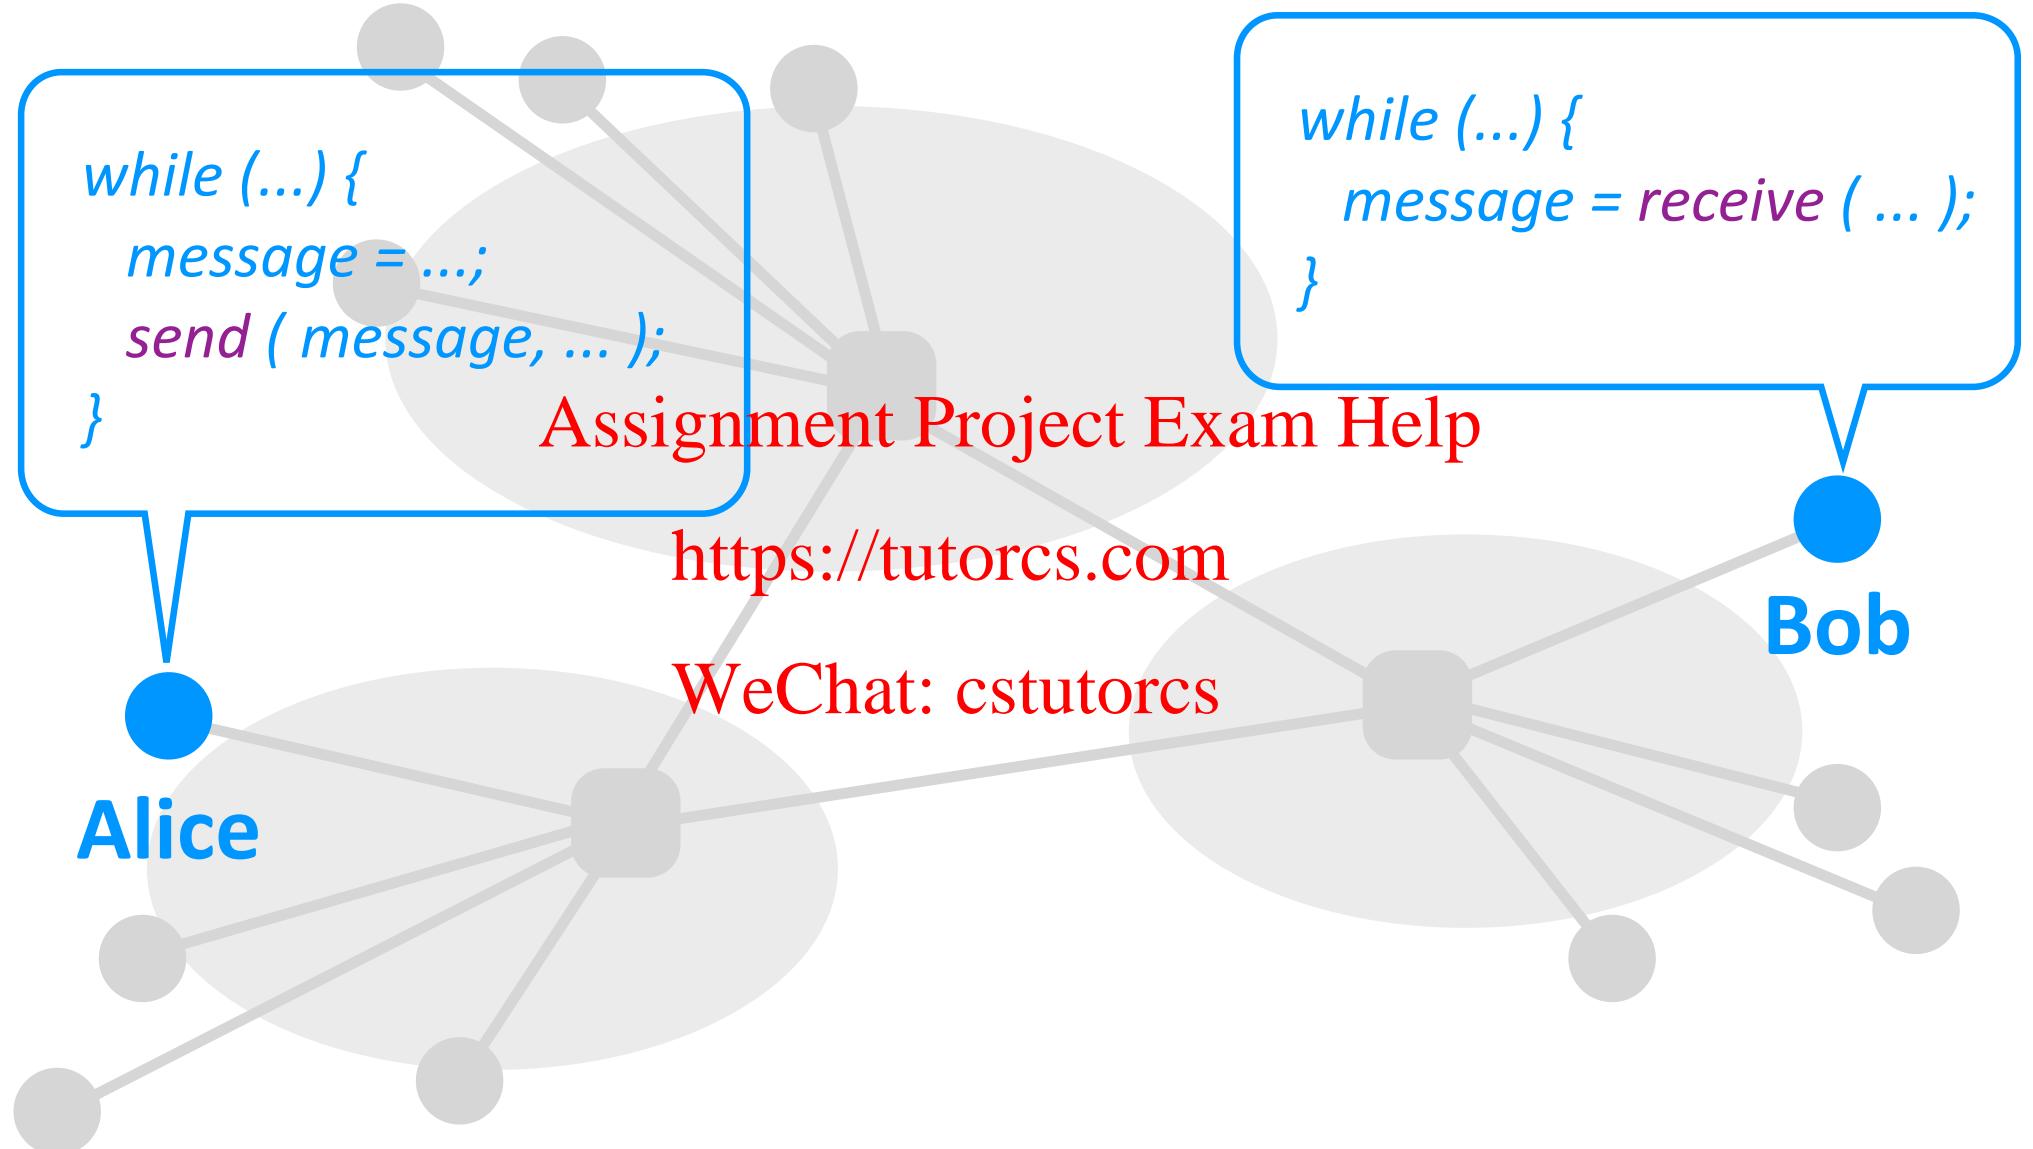

- ❖ *Internet standards*
<https://tutorcs.com>
 - RFC: Request for comments
 - IETF: Internet Engineering Task Force

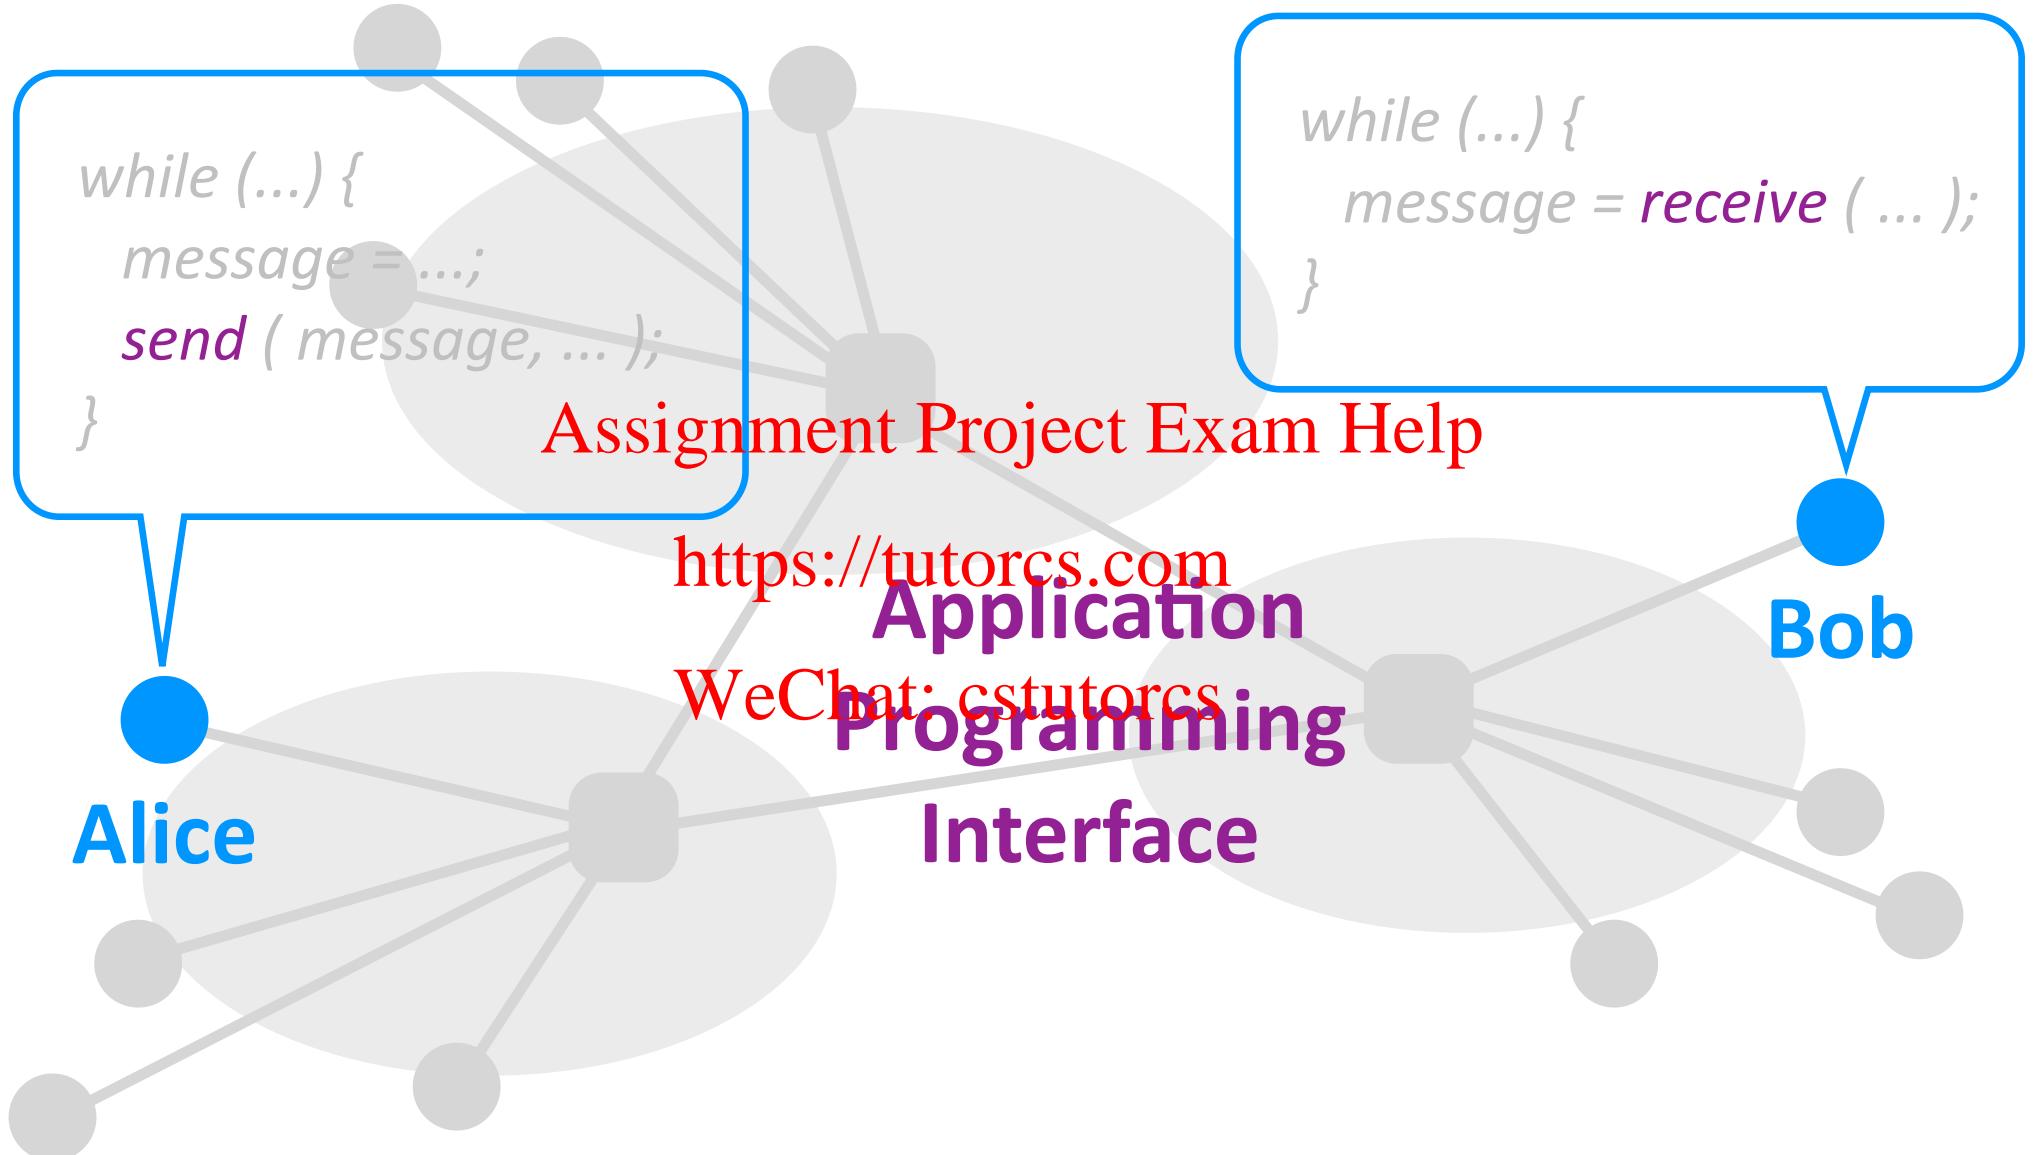

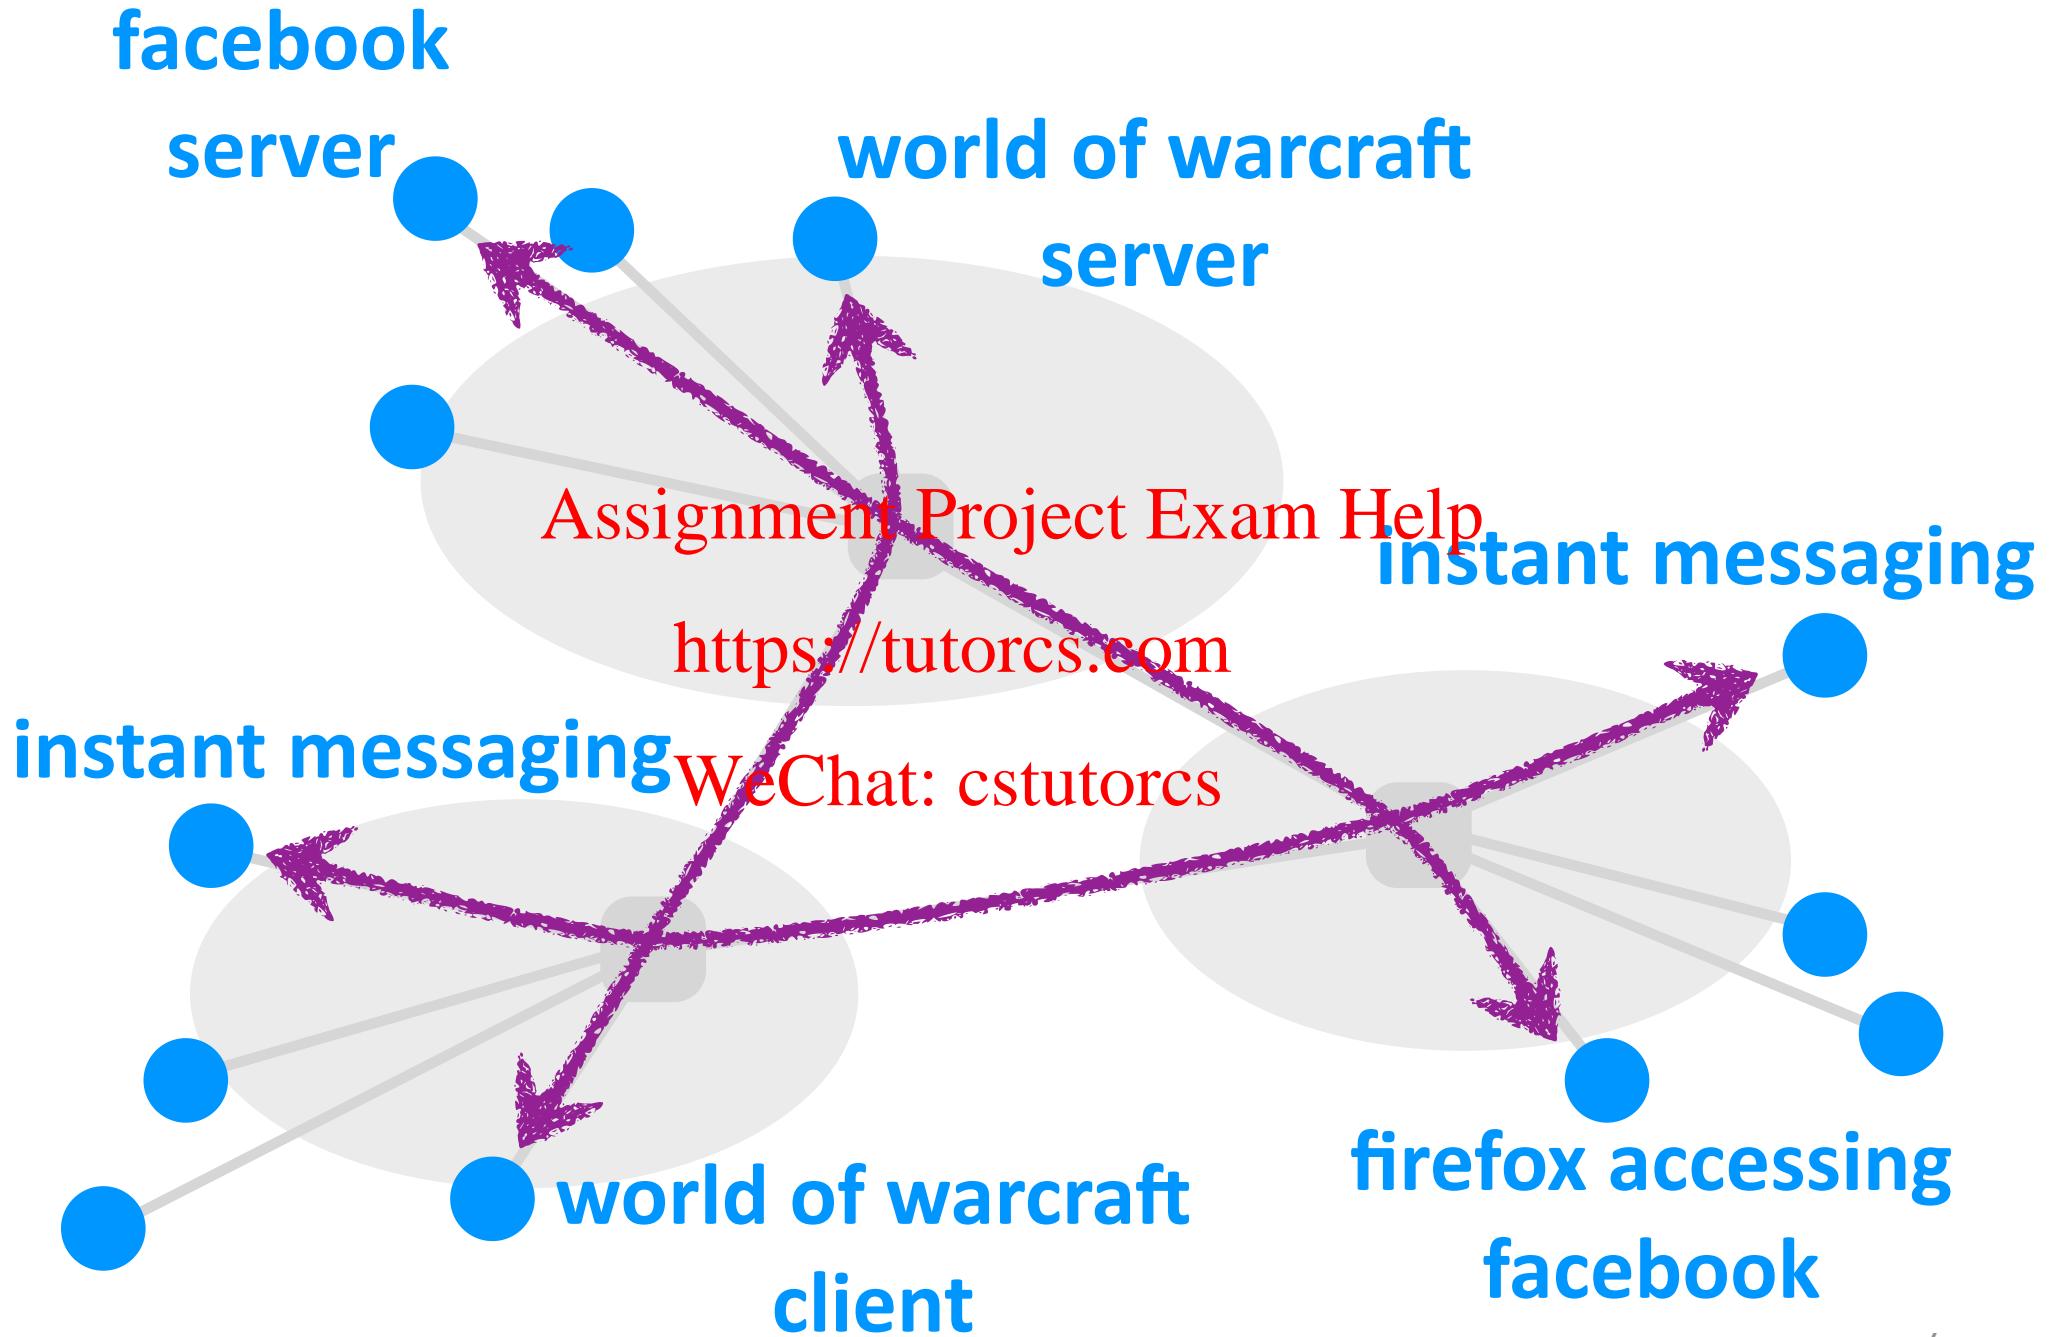

What's the Internet: a service view

- ❖ *Infrastructure that provides services to applications:*
 - Web, VoIP, email, games, e-commerce, social nets, ...
- ❖ *provides programming interface to apps*
 - hooks that allow sending and receiving app programs to “connect” to Internet
 - provides service options, analogous to postal service

What's a protocol?

human protocols:

- ❖ “what’s the time?”
- ❖ “I have a question”
- ❖ introduction

... specific msgs sent

... specific actions taken
when msgs received, or
other events

network protocols:

- ❖ machines rather than humans
- ❖ all communication activity in Internet governed by protocols

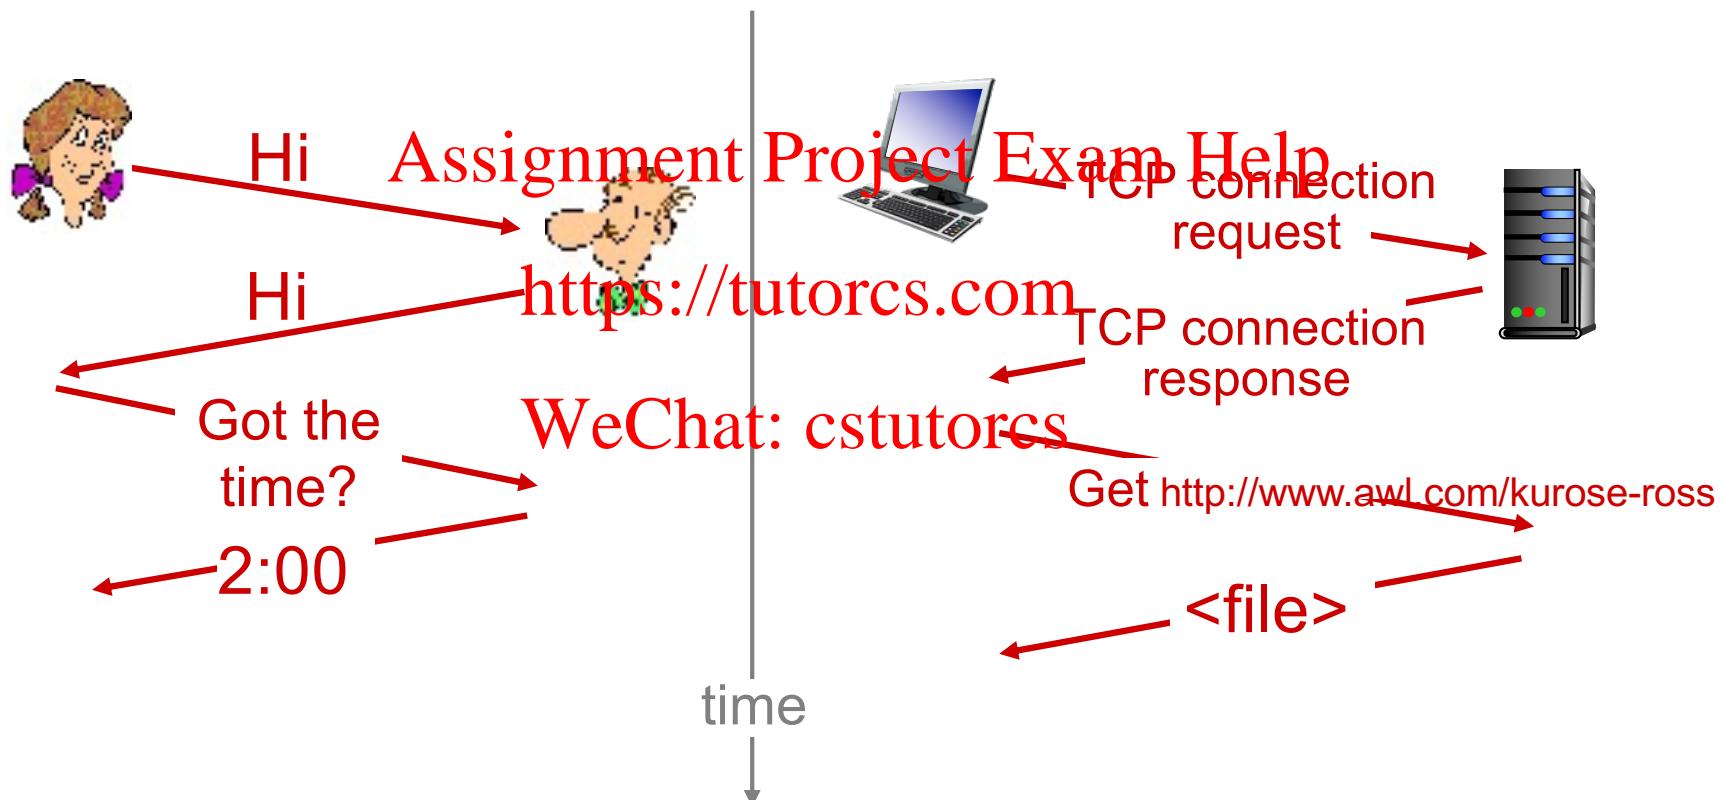

<https://tutorcs.com>

WeChat: cstutorcs

protocols define format, order of msgs sent and received among network entities, and actions taken on msg transmission, receipt

What's a protocol?

a human protocol and a computer network protocol:

Q: other human protocols?

Quiz: Internet of Things

How many Internet-connected devices do you have in your home (include your computers, phones, tablets)?

- A. Less than 10
- B. Between 10 to 20
- C. Between 20 to 50
- D. Between 50 to 100
- E. More than 100

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

Open a browser and type: www.zeeplings.com/salil

I. Introduction: roadmap

I.1 what *is* the Internet?

I.2 network edge

- end systems, access networks, links

I.3 network core

- packet switching, circuit switching, network structure

I.4 delay, loss, throughput in networks

I.5 protocol layers, service models

I.6 networks under attack: security

I.7 history

A closer look at network structure:

❖ *network edge:*

- hosts: clients and servers
- servers often in data centers

Assignment Project Exam Help

❖ *access networks*

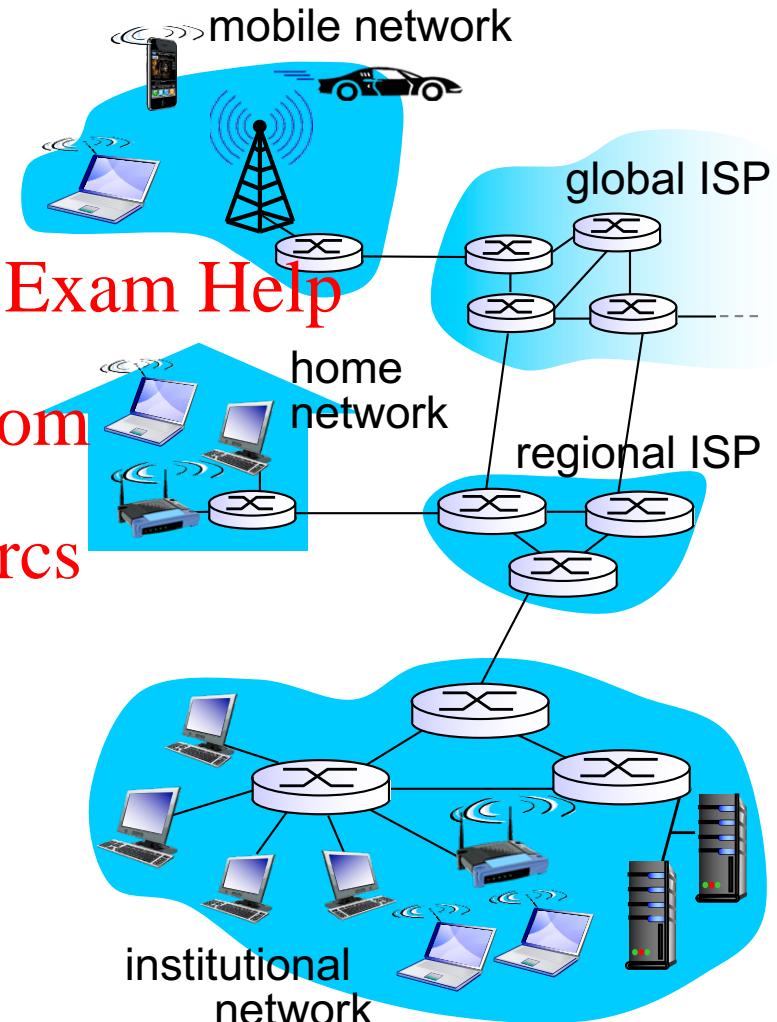

<https://cstutorcs.com>

media: wired, wireless

communication links

❖ *network core:*

- interconnected routers
- network of networks

Access networks and physical media

Q: How to connect end systems to edge router?

- ❖ residential access nets
- ❖ institutional Access networks (school, company)
- ❖ mobile access networks

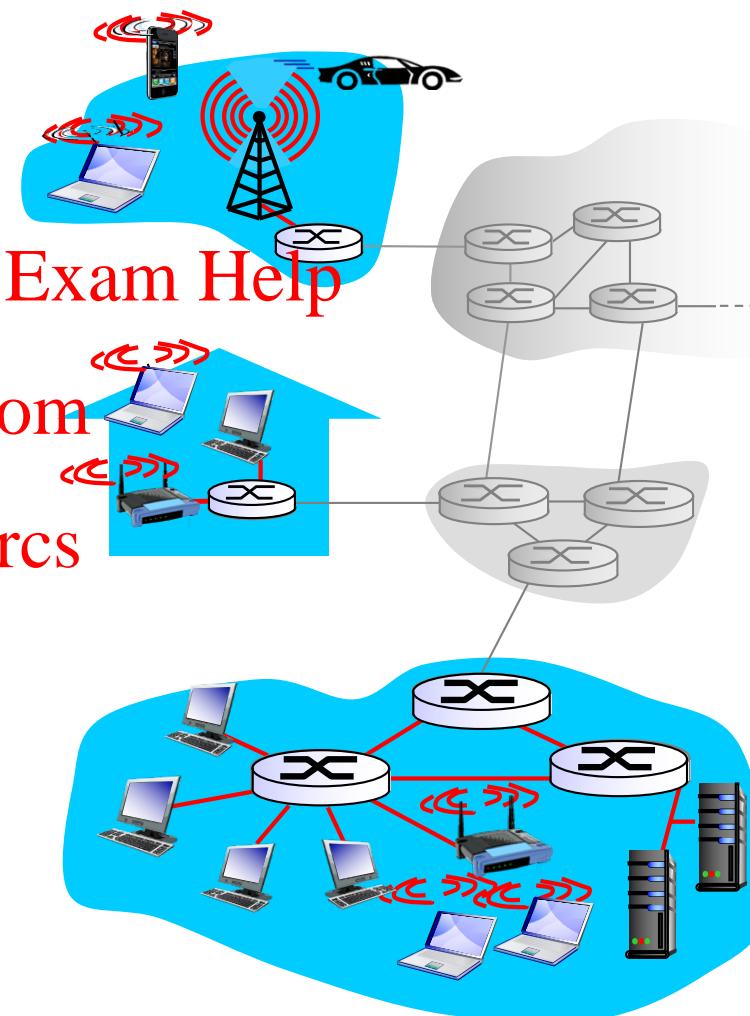

Assignment Project Exam Help

<https://tutorcs.com>

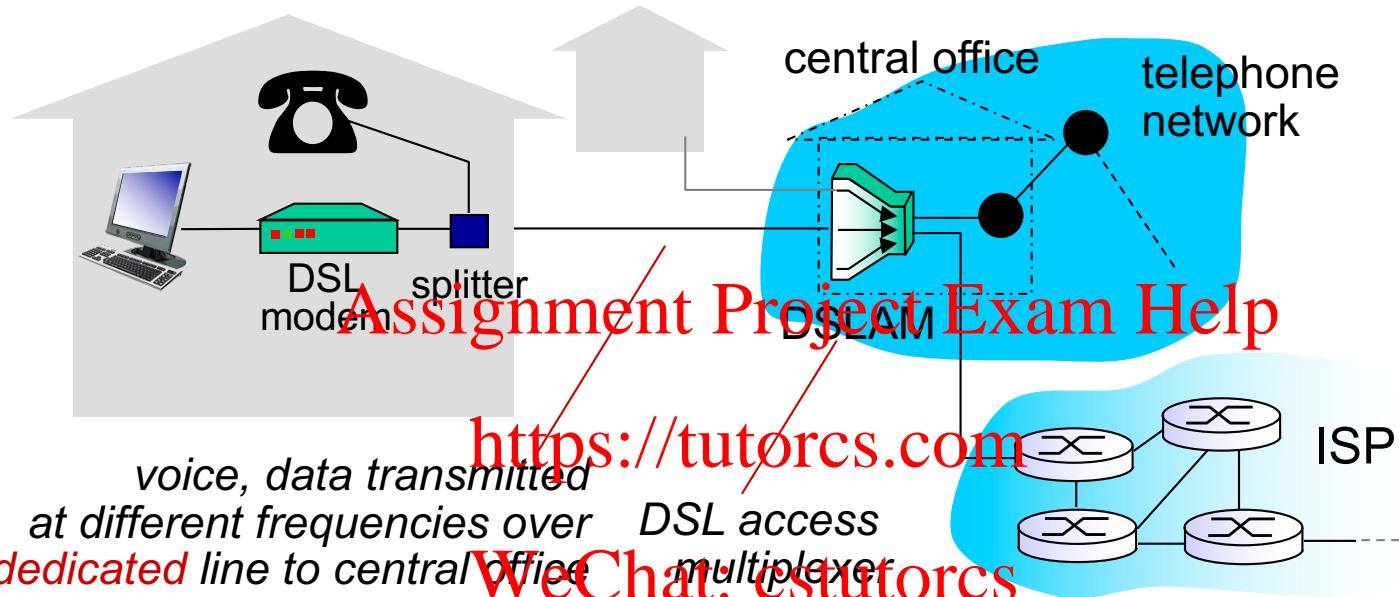

WeChat: cstutorcs

keep in mind:

- ❖ bandwidth (bits per second) of access network?
- ❖ shared or dedicated?

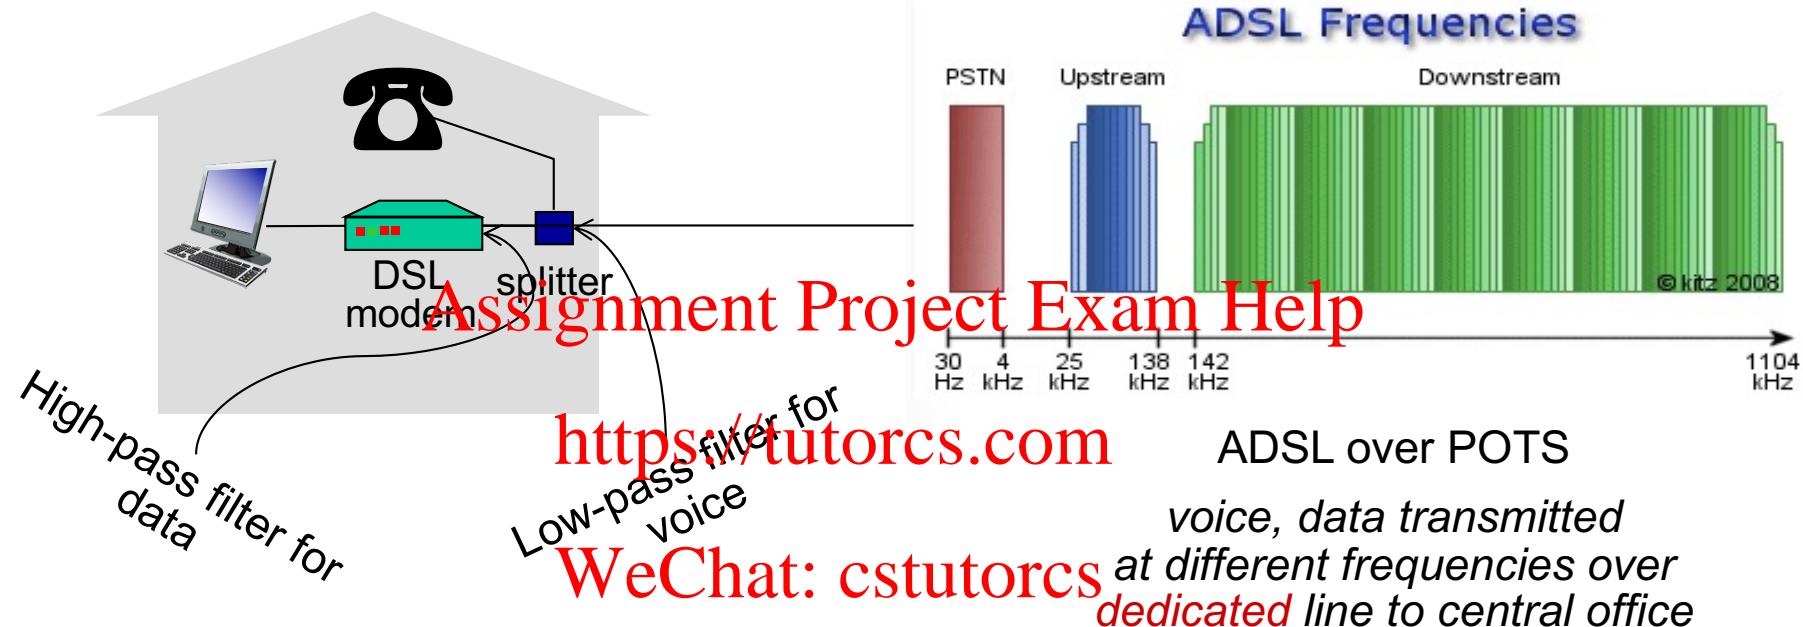

Access net: digital subscriber line (DSL)

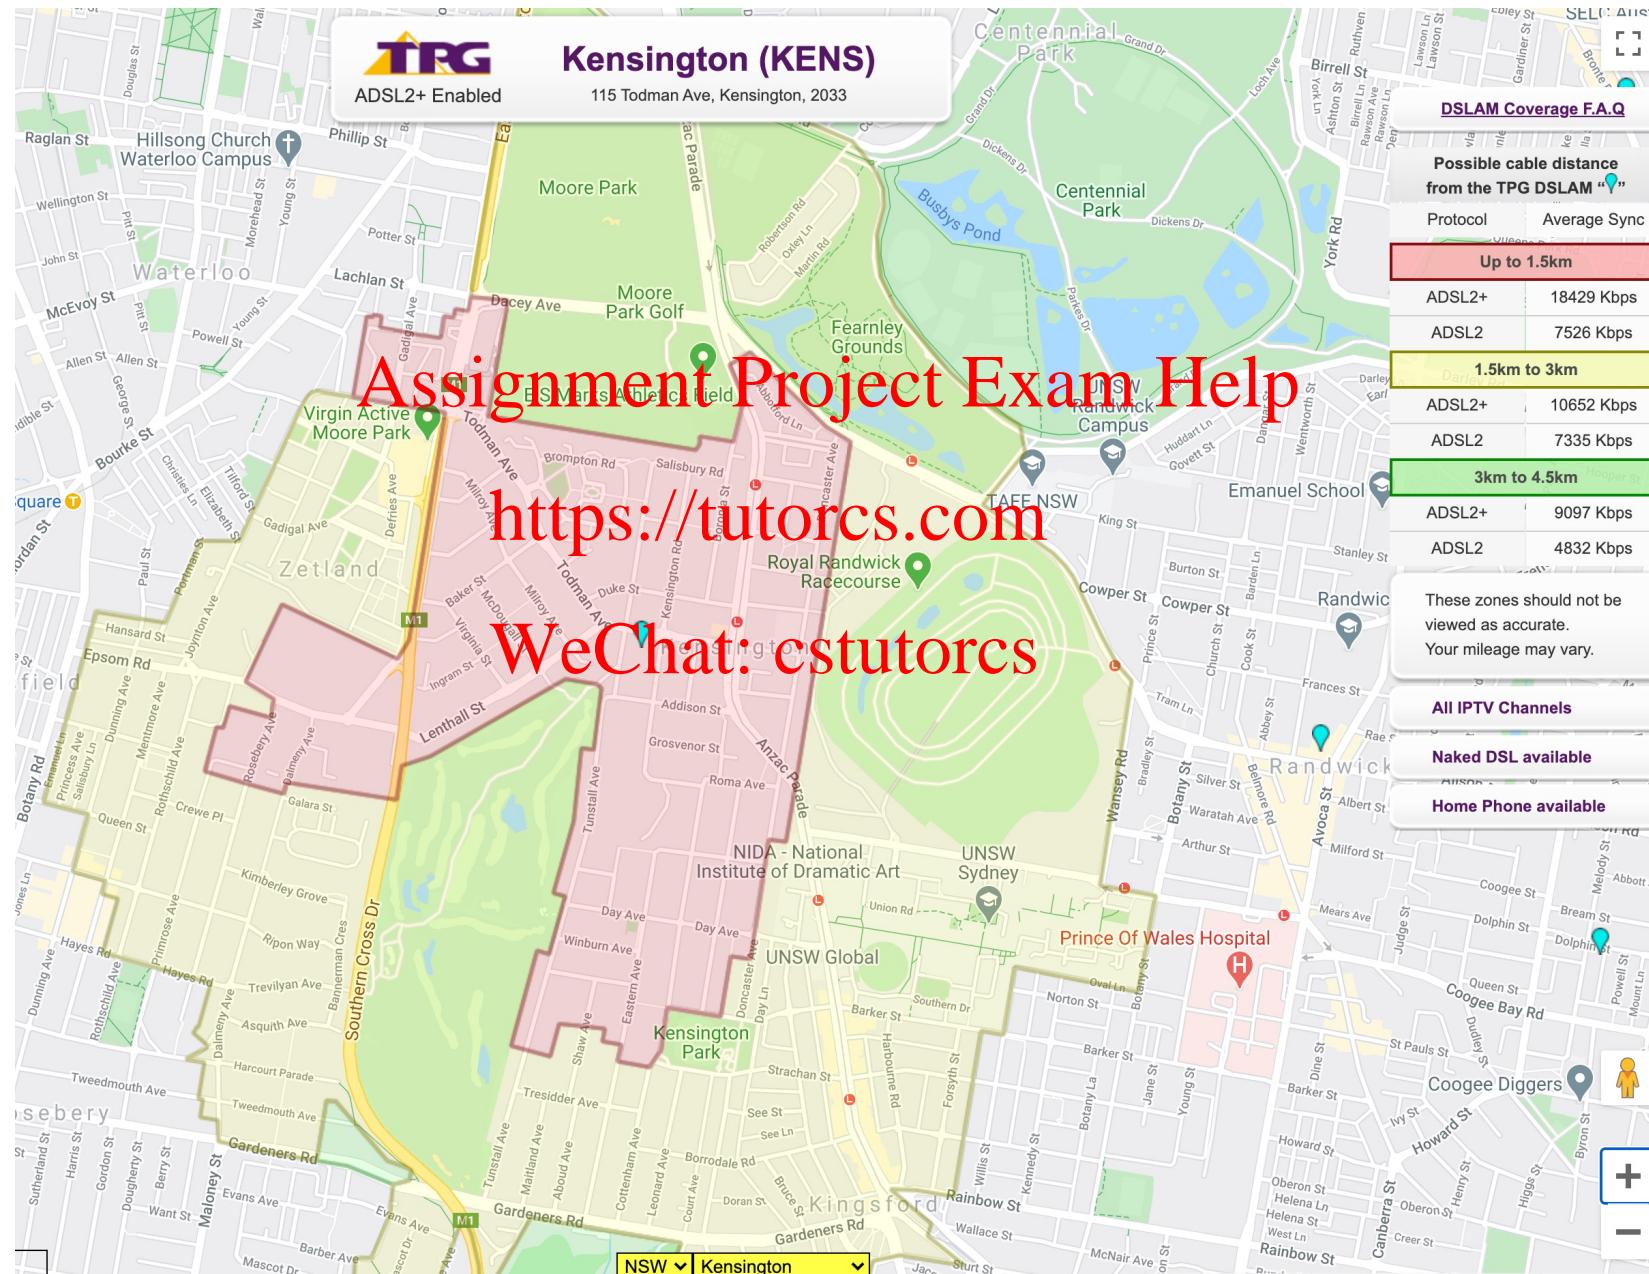

- ❖ use **existing** telephone line to central office DSLAM
 - data over DSL phone line goes to Internet
 - voice over DSL phone line goes to telephone net

Access net: digital subscriber line (DSL)

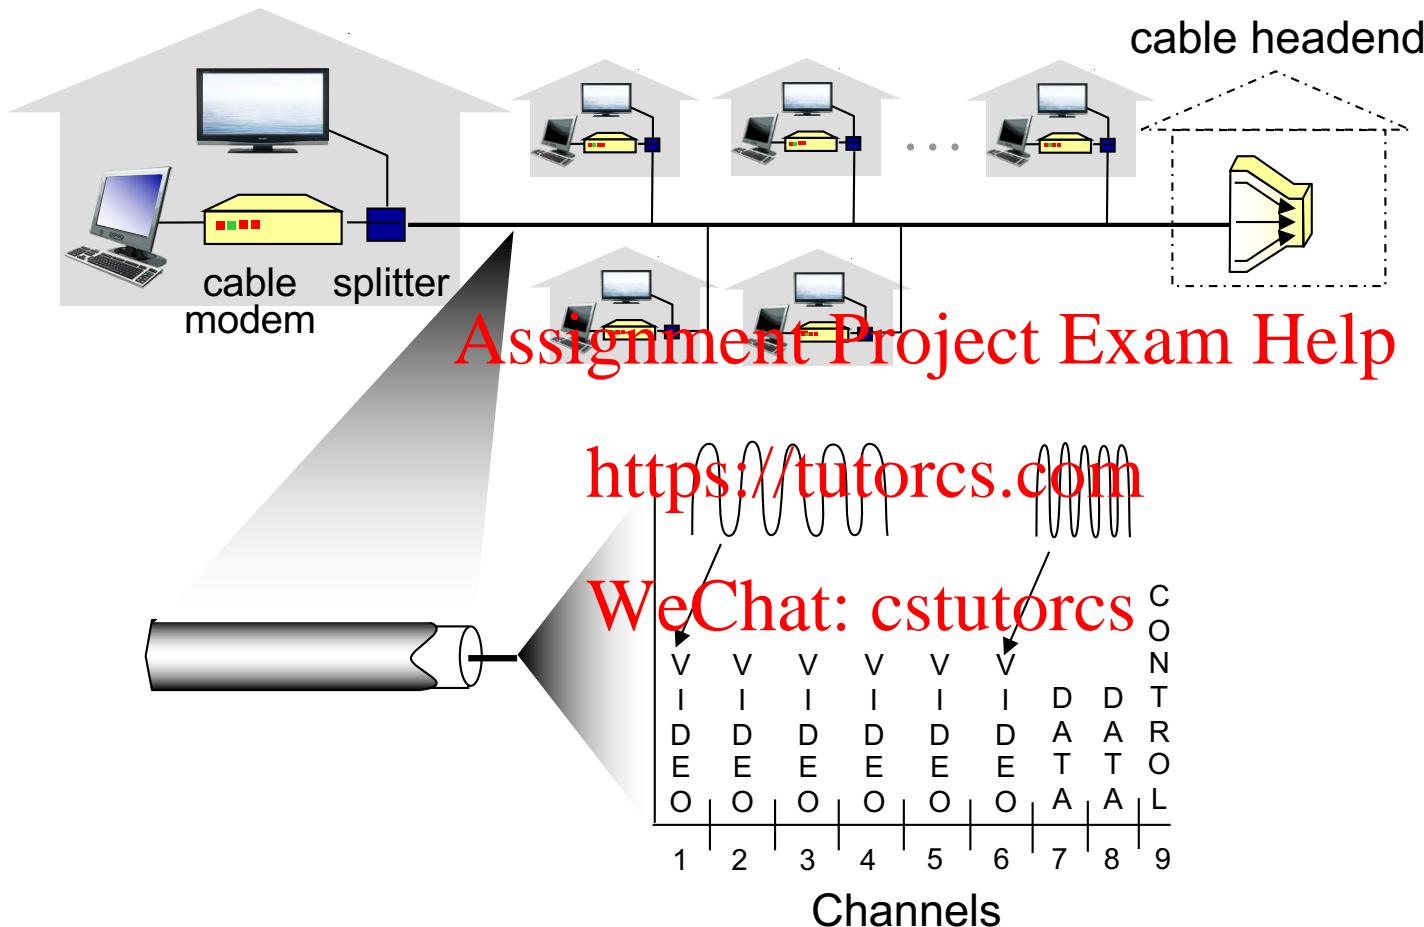

- Different data rates for upload and download (ADSL)
 - < 2.5 Mbps upstream transmission rate (typically < 1 Mbps)
 - < 24 Mbps downstream transmission rate (typically < 10 Mbps)

Access net: digital subscriber line (DSL)

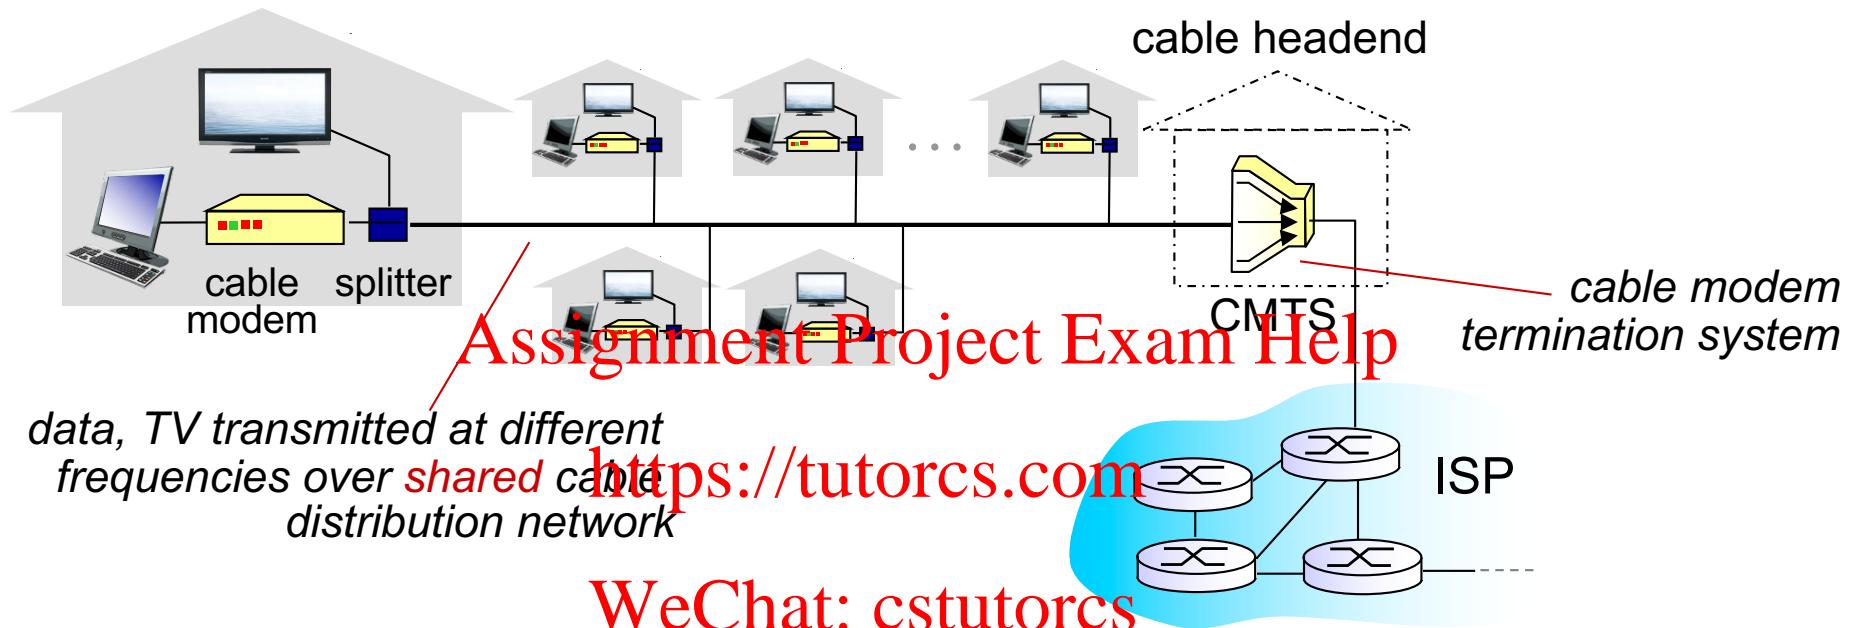

Access net: cable network

frequency division multiplexing: different channels transmitted in different frequency bands

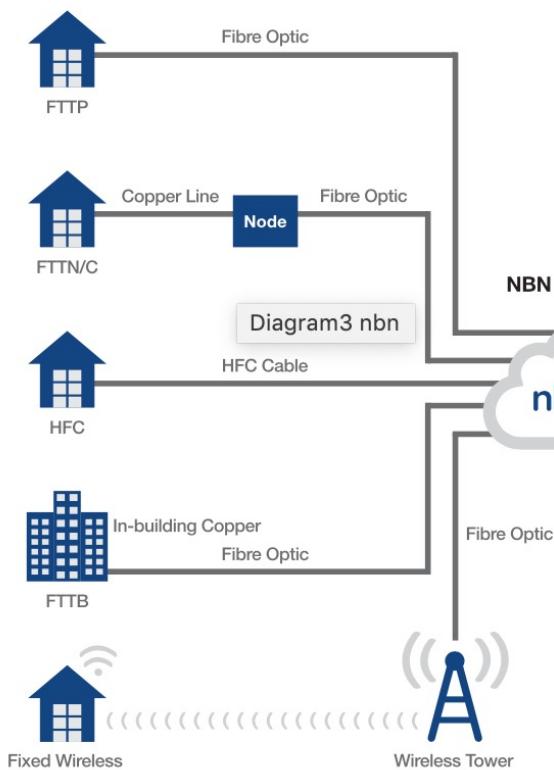

Access net: cable network

- ❖ HFC: hybrid fiber coax
 - asymmetric: up to 30Mbps downstream transmission rate, 2 Mbps upstream transmission rate
- ❖ network of cable, fiber attaches homes to ISP router
 - homes *share access network* to cable headend
 - unlike DSL, which has dedicated access to central office

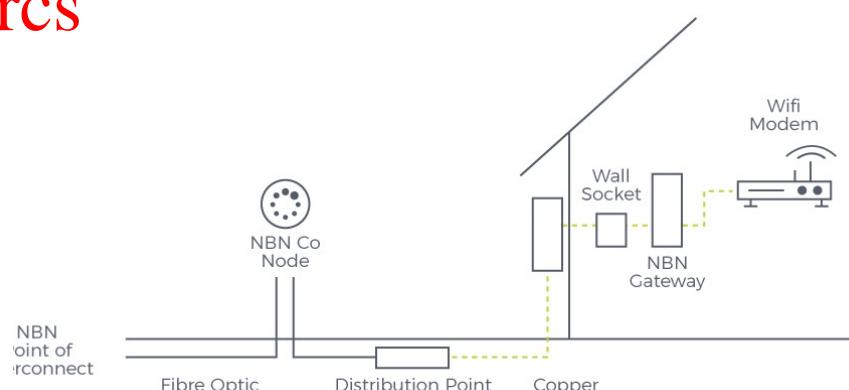

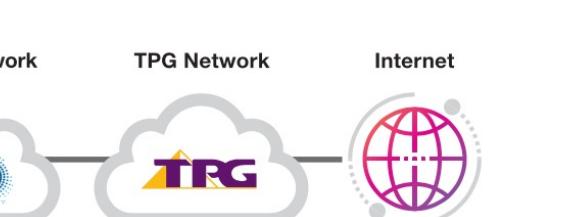

Fiber to the home/premise/curb

- ❖ Fully optical fiber path all the way to the home (or premise or curb)
 - e.g., NBN, Google, Verizon FIOS
 - ~30 Mb/s to Gbps

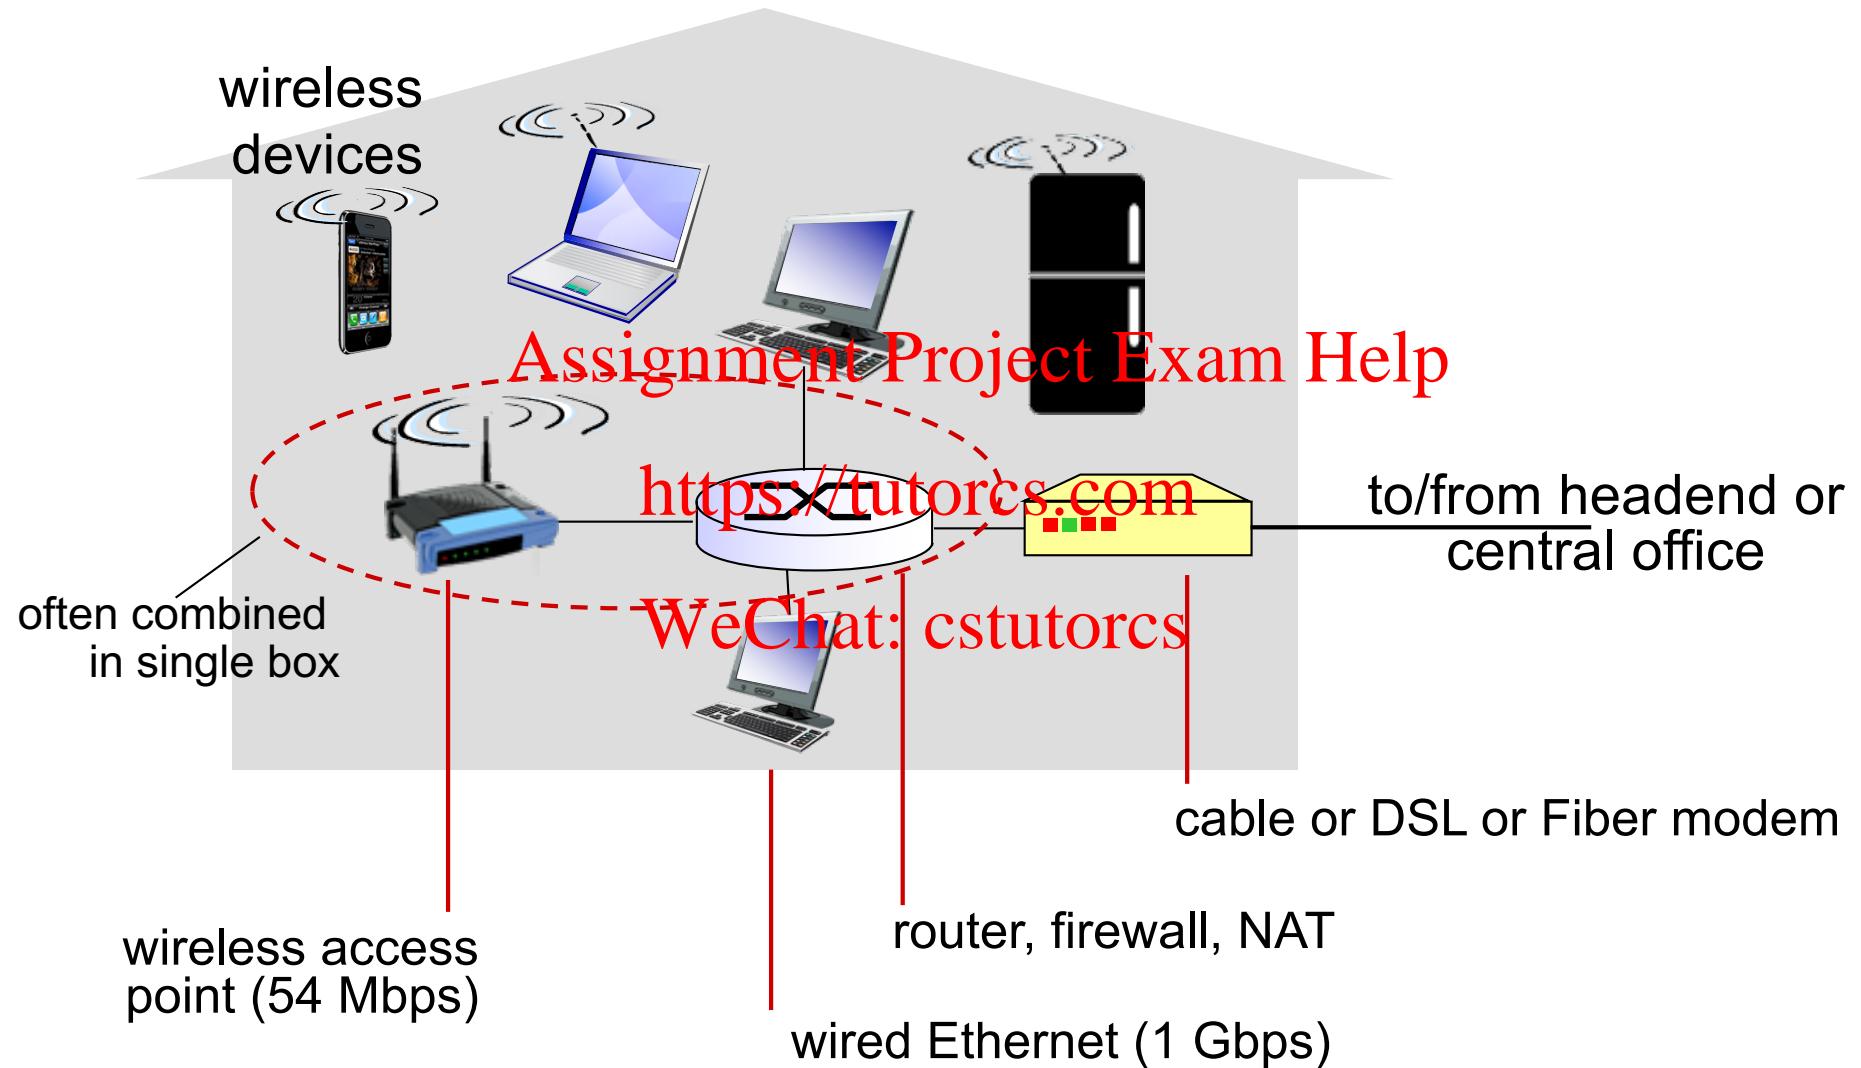

<https://tutorcs.com>

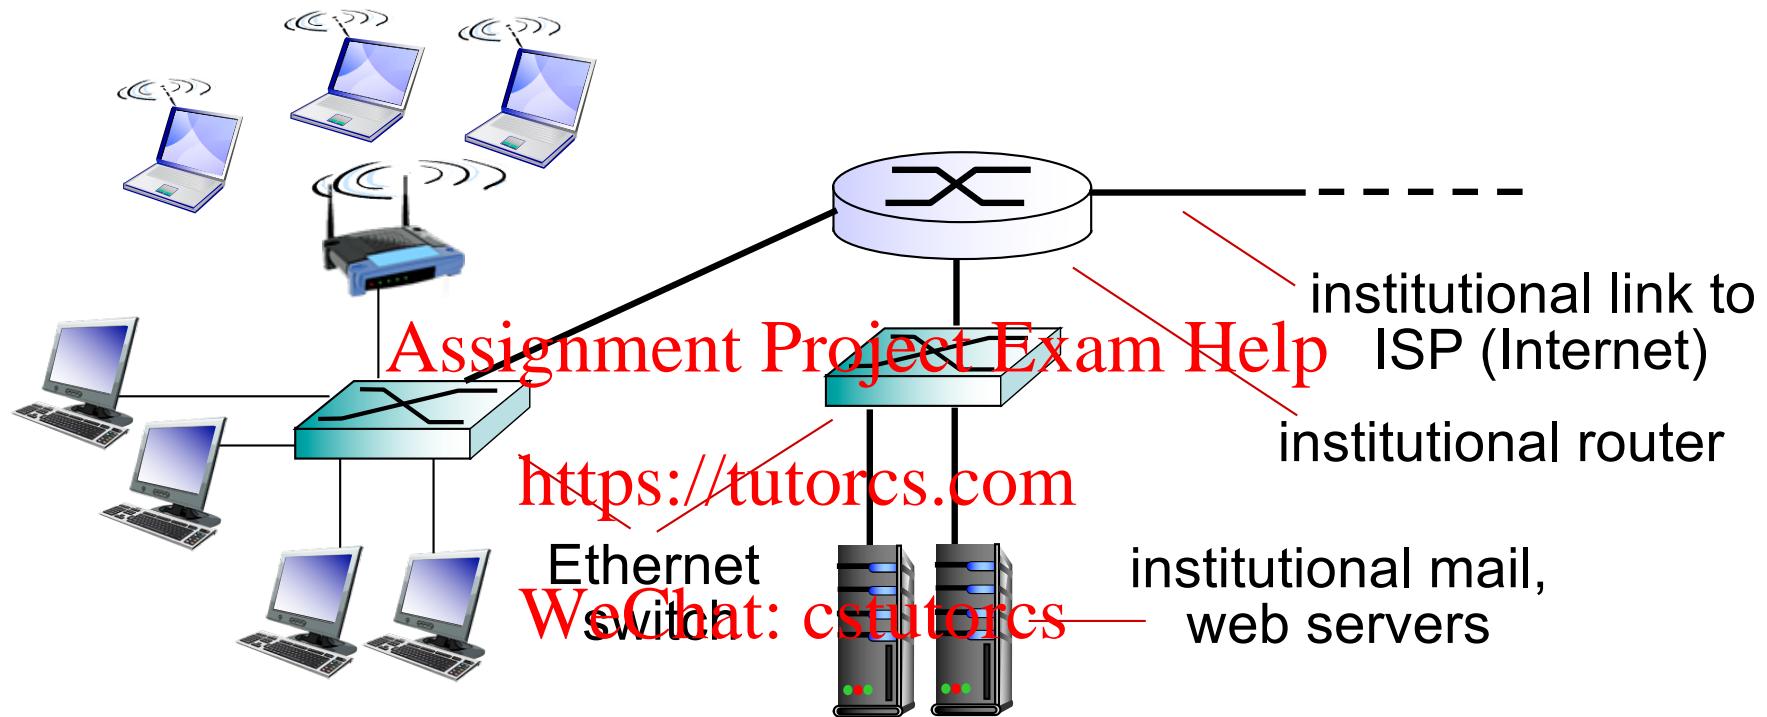

WeChat: cstutorcs

Access net: home network

Enterprise access networks (Ethernet)

- ❖ typically used in companies, universities, etc
- ❖ 10 Mbps, 100Mbps, 1Gbps, 10Gbps transmission rates
- ❖ today, end systems typically connect into Ethernet switch

Wireless access networks

- ❖ shared wireless access network connects end system to router
 - via base station aka “access point”

wireless LANs:

- within building (100 ft)
- 802.11b/g/n (WiFi): 11, 54, 300 Mbps transmission rate
- 802.11ac: 1 Gbps(2.4GHz) + 4.34Gbps (5GHz)
- 802.11ax: WiFi 6

to Internet

wide-area wireless access

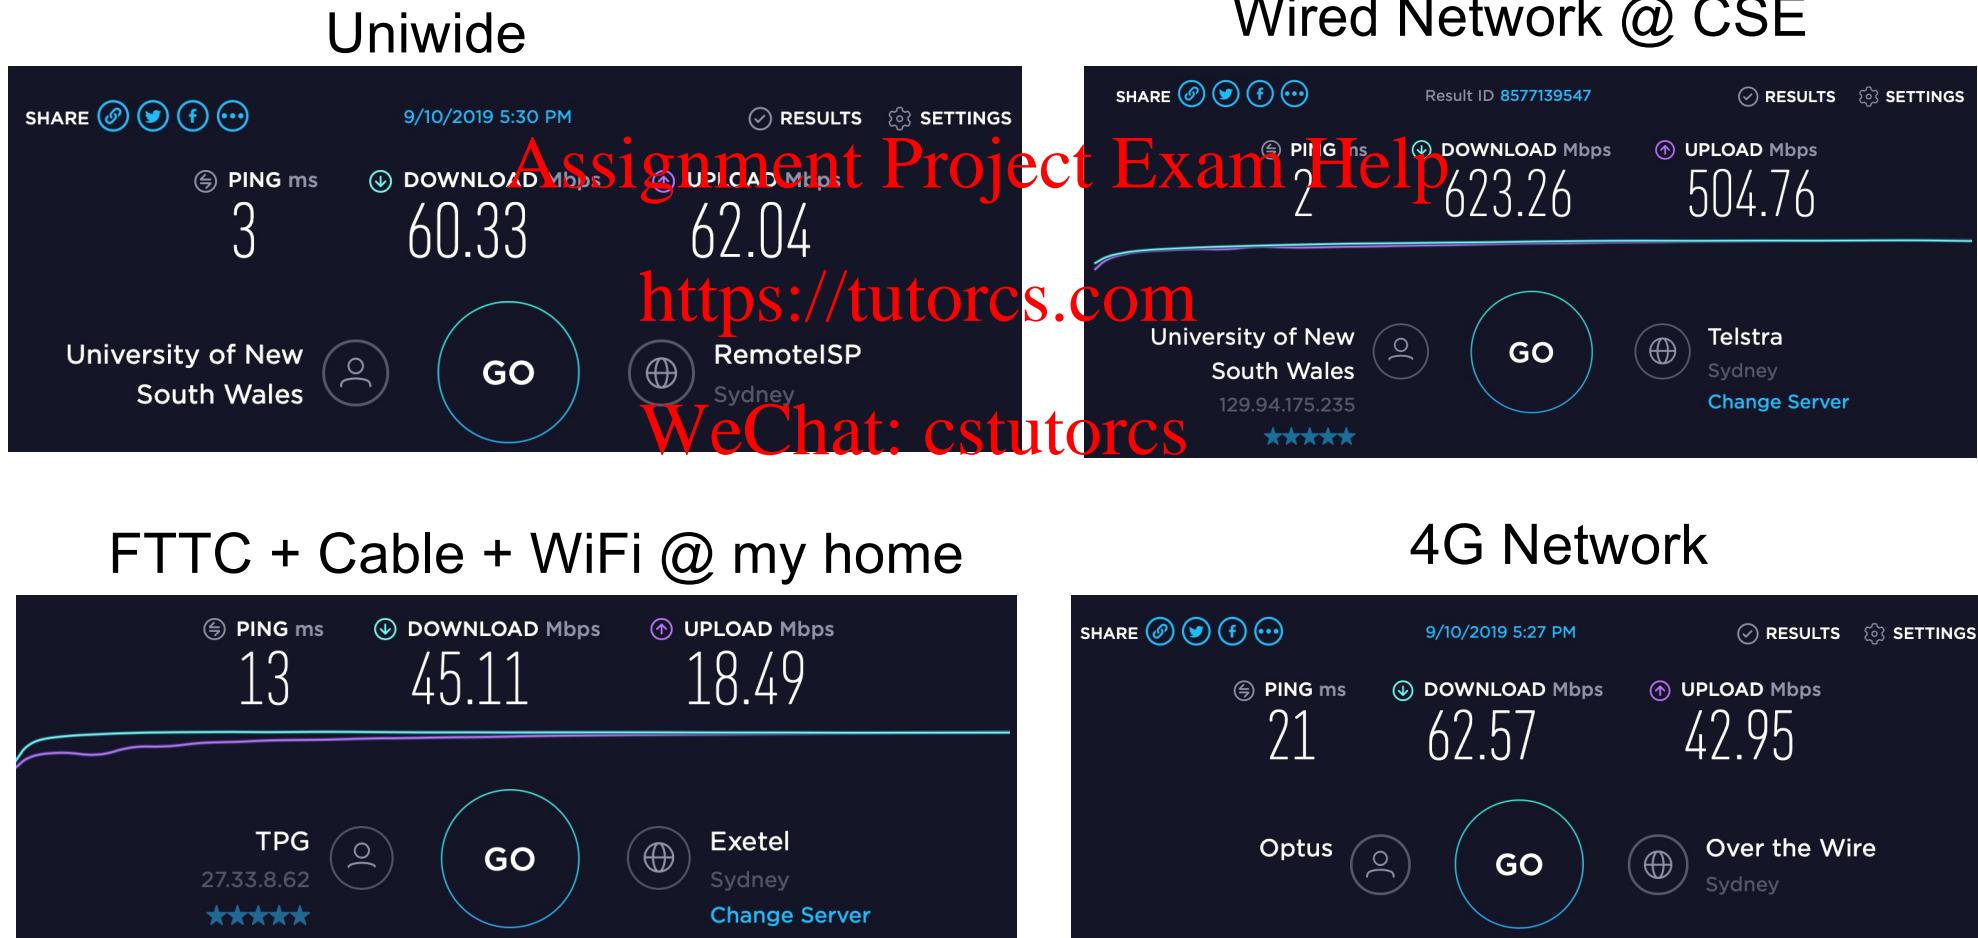

- provided by telco (cellular) operator, 10's km
- between 10 and 100 Mbps
- 4G, 5G

to Internet

Sample results

Can you explain the differences?

Quiz: Your access network

Your residential ISP provides connectivity using the following technology:

- A. DSL
- B. Cable
- C. Fiber to the home/premise/curb
- D. Mobile (3G/4G/5G)
- E. Satellite
- F. Something Else (type in Zeetings comment)

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

Open a browser and type: **www.zeetings.com/salil**

Physical media

Self Study

- ❖ **bit:** propagates between transmitter/receiver pairs
- ❖ **physical link:** what lies between transmitter & receiver
- ❖ **guided media:**
 - signals propagate in solid media: copper, fiber, coax
- ❖ **unguided media:**
 - signals propagate freely, e.g., radio

Physical media: twisted pair, coax, fiber

twisted pair (TP)

- ❖ two insulated copper wires
 - Category 5: 100 Mbps, 1 Gpbs Ethernet
 - Category 6: 10Gbps

coaxial cable:

- ❖ two concentric copper conductors
- ❖ broadband:
 - multiple channels on cable
 - HFC

fiber optic cable:

- ❖ glass fiber carrying light pulses, each pulse a bit
- ❖ high-speed operation:
 - high-speed point-to-point transmission (e.g., 10' s-100' s Gpbs transmission rate)

Assignment Project Exam Help
<https://tutorcs.com>

WeChat: cstutorcs

low error rate:

- repeaters spaced far apart
- immune to electromagnetic noise

Physical media: radio

Self Study

- ❖ signal carried in electromagnetic spectrum, i.e., no physical “wire”

- ❖ propagation environment effects:
 - reflection
 - obstruction by objects
 - interference

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

radio link types:

- ❖ terrestrial microwave
 - e.g. up to 45 Mbps channels
- ❖ LAN (e.g. WiFi)
 - 11Mbps, 54 Mbps, 450 Mbps, Gbps
- ❖ wide-area (e.g., cellular)
 - 4G cellular: ~ 10 Mbps
- ❖ satellite
 - Kbps to 45Mbps channel (or multiple smaller channels)
 - 270 msec end-end delay
 - geosynchronous versus low earth-orbiting (LEO)

I. Introduction: roadmap

I.1 what *is* the Internet?

I.2 network edge

- end systems, access networks, links

I.3 network core

- packet switching, circuit switching, network structure

I.4 delay, loss, throughput in networks

I.5 protocol layers, service models

I.6 networks under attack: security

I.7 history

The network core

- ❖ mesh of interconnected routers/switches
- ❖ Two forms of switched networks:

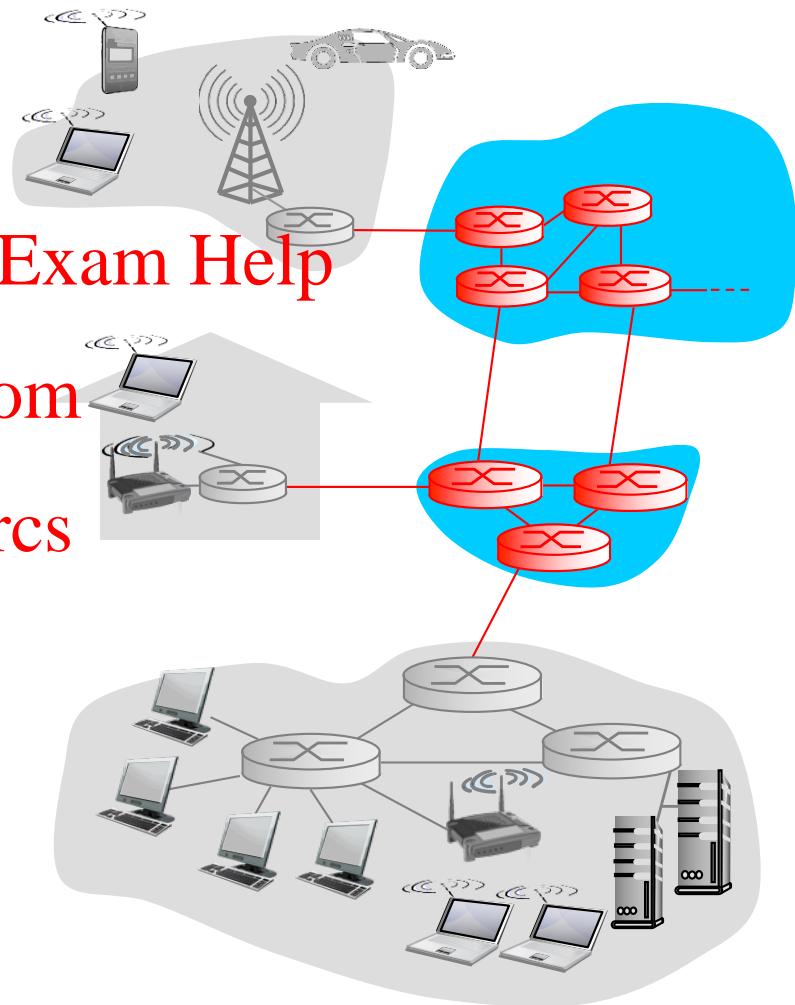

Assignment Project Exam Help

- Circuit switching: used in the legacy telephone networks

WeChat: cstutorcs

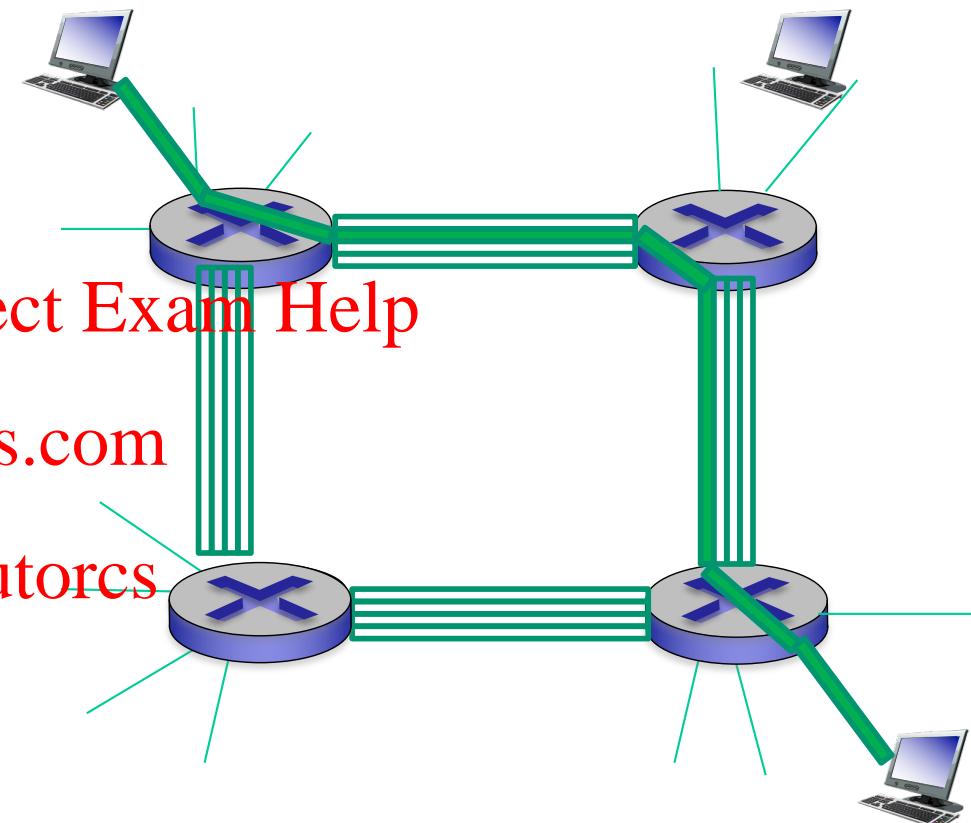

- Packet switching: used in the Internet

Circuit Switching

end-end resources allocated to, reserved for “call” between source & dest:

- in diagram, each link has four circuits.
 - call gets 2nd circuit in top link and 1st circuit in right link.
- dedicated resources: no sharing
 - circuit-like (guaranteed) performance
- circuit segment idle if not used by call (*no sharing*)
- commonly used in traditional telephone networks

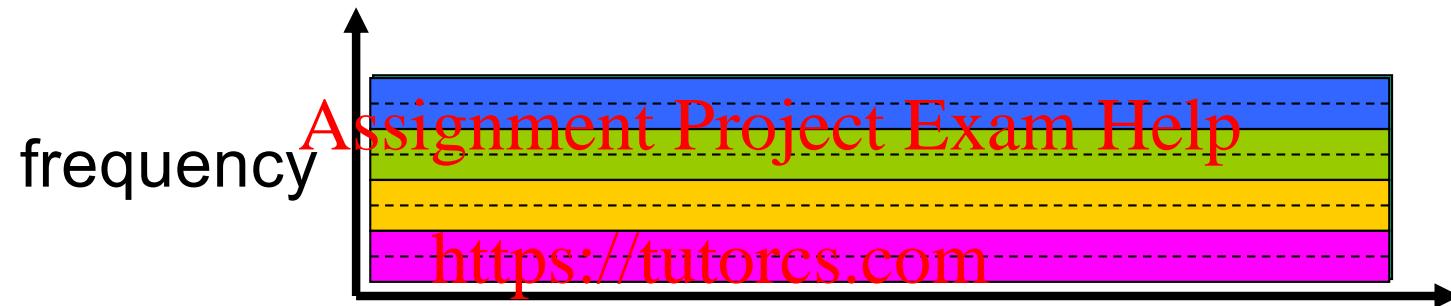

Assignment Project Exam Help

WeChat: cstutorcs

Circuit switching: FDM versus TDM

FDM

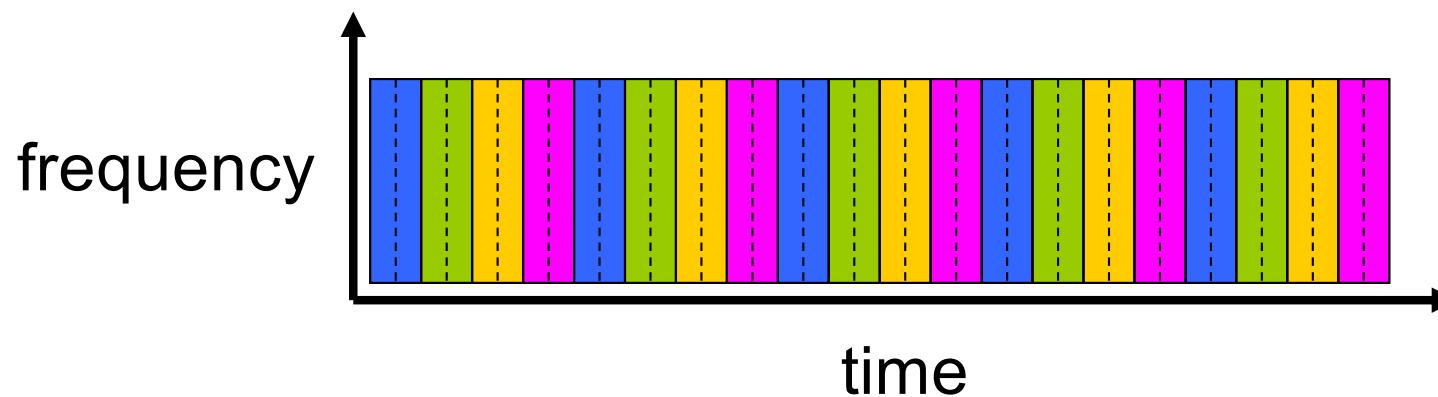

Example:

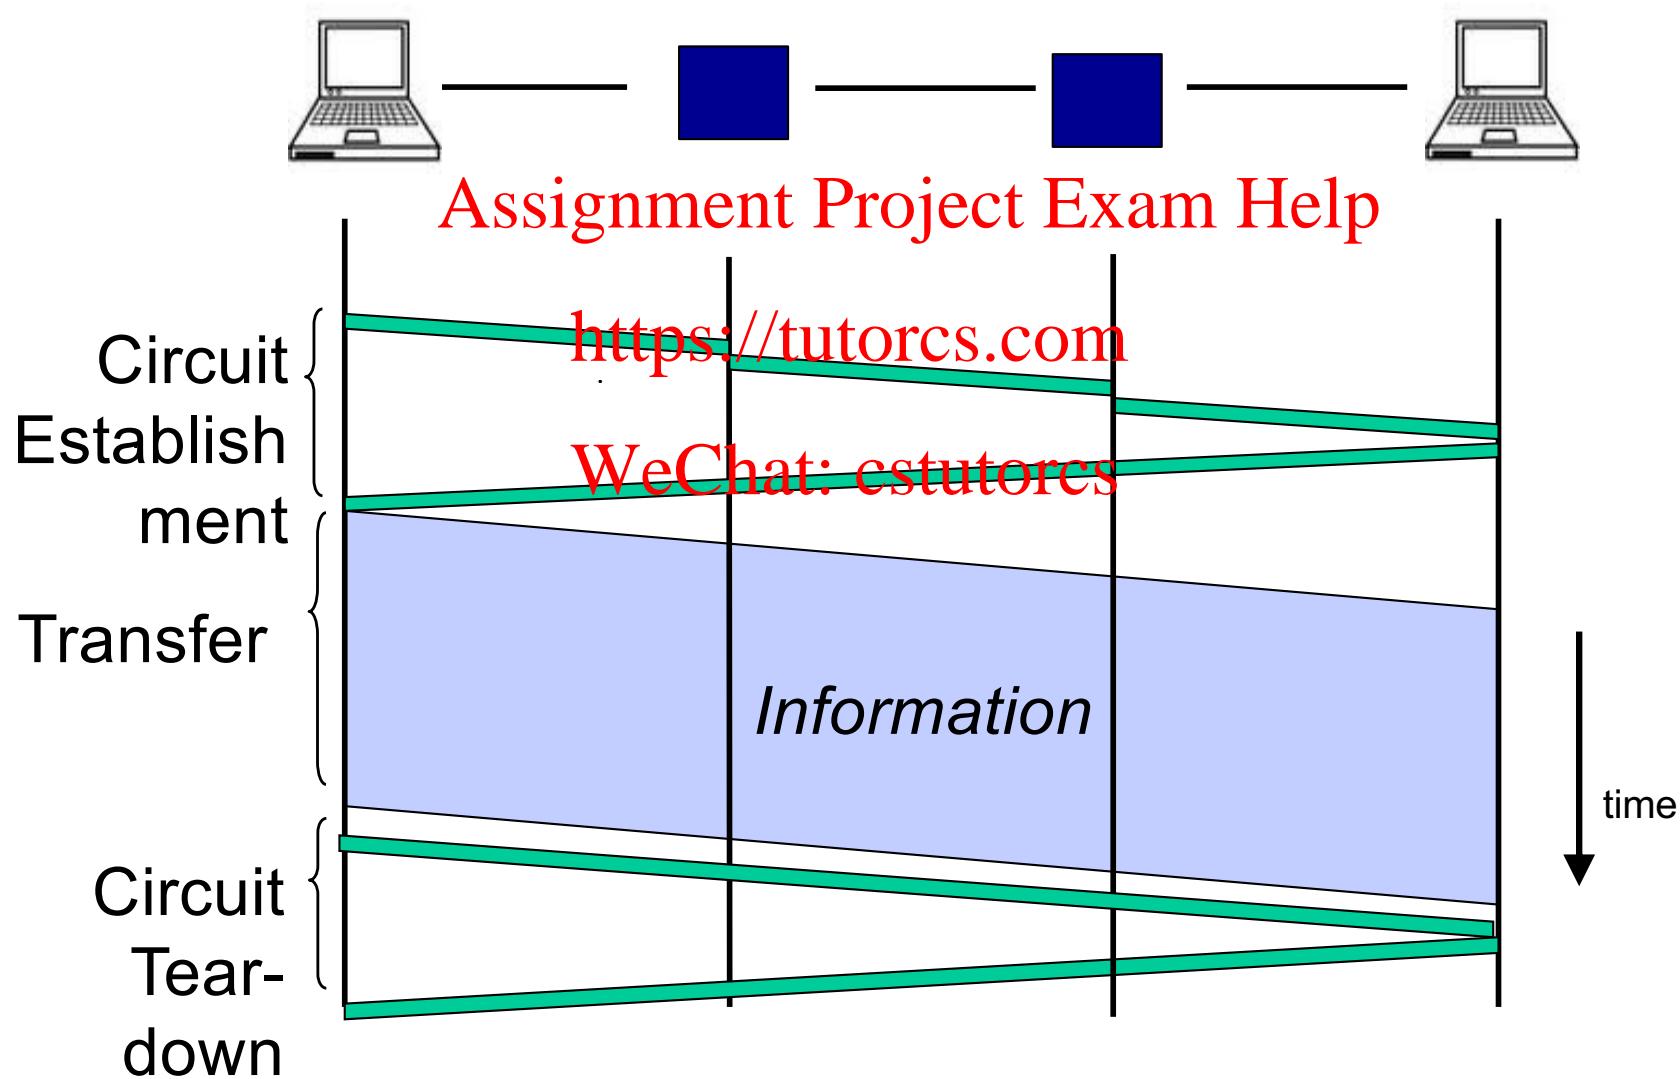

4 users

TDM

Timing in Circuit Switching

Why circuit switching is not feasible?

- **Inefficient**
 - Computer communications tends to be very bursty. For example, viewing a sequence of web pages
 - Dedicated circuit cannot be used or shared in periods of silence **Assignment Project Exam Help**
 - Cannot adopt to network dynamics
- **Fixed data rate** <https://tutorcs.com>
 - Computers communicate at very diverse rates. For example, viewing a video vs using telnet or web browsing
 - Fixed data rate is not useful
- **Connection state maintenance**
 - Requires per communication state to be maintained that is a considerable overhead
 - Not scalable

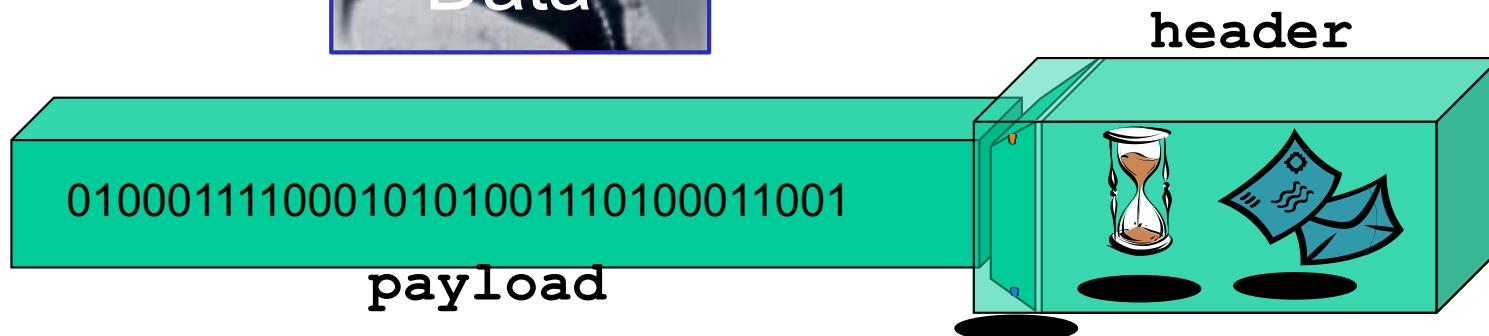

Packet Switching

- ❖ Data is sent as chunks of formatted bits (**Packets**)
- ❖ Packets consist of a “**header**” and “**payload**”

Assignment Project Exam Help

1. Internet Address
2. Age (TTL)
3. Checksum to protect header

Packet Switching

- ❖ Data is sent as chunks of formatted bits (**Packets**)
- ❖ Packets consist of a “**header**” and “**payload**”
 - payload is the ~~Assignment Project Exam Help~~
 - header holds instructions to the network for how to handle packet (~~https://tutorcs.com~~ think of the header as an API)

WeChat: cstutorcs

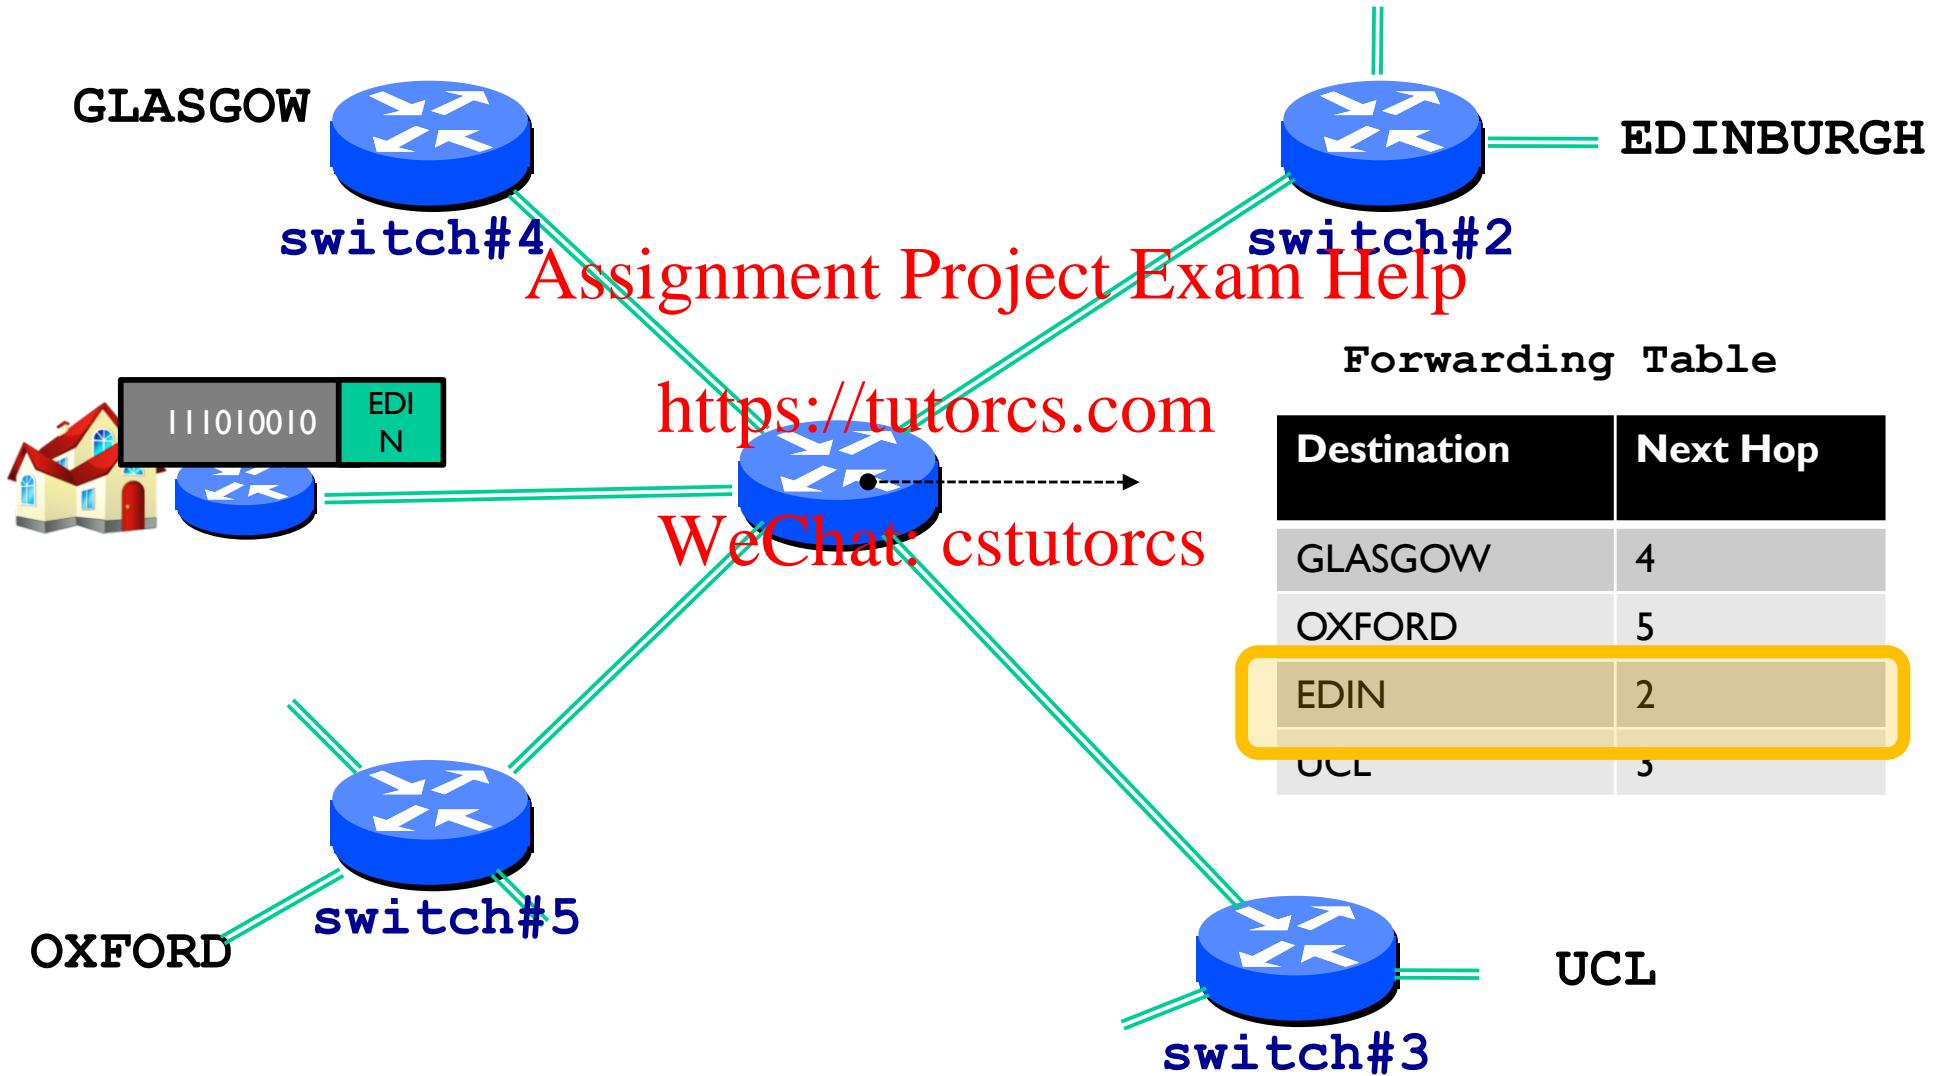

Packet Switching

- ❖ Data is sent as chunks of formatted bits (Packets)
- ❖ Packets consist of a “header” and “payload”
- ❖ Switches “forward” packets based on their headers

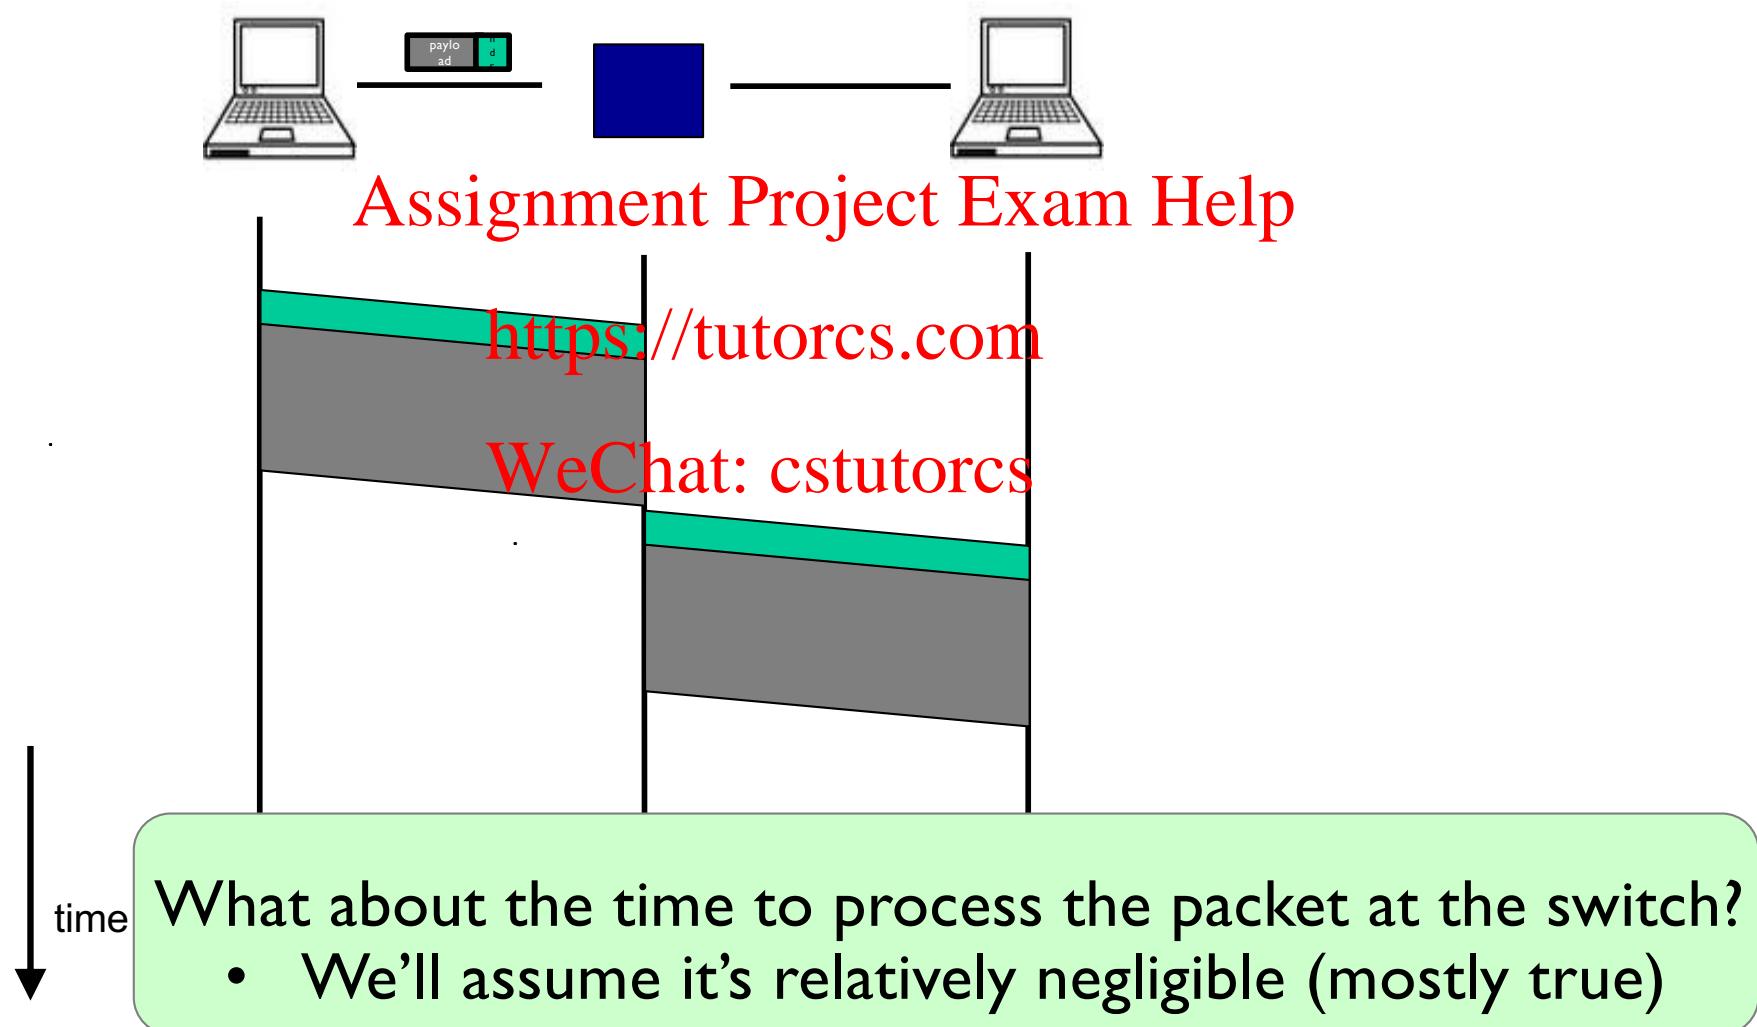

<https://tutorcs.com>

WeChat: cstutorcs

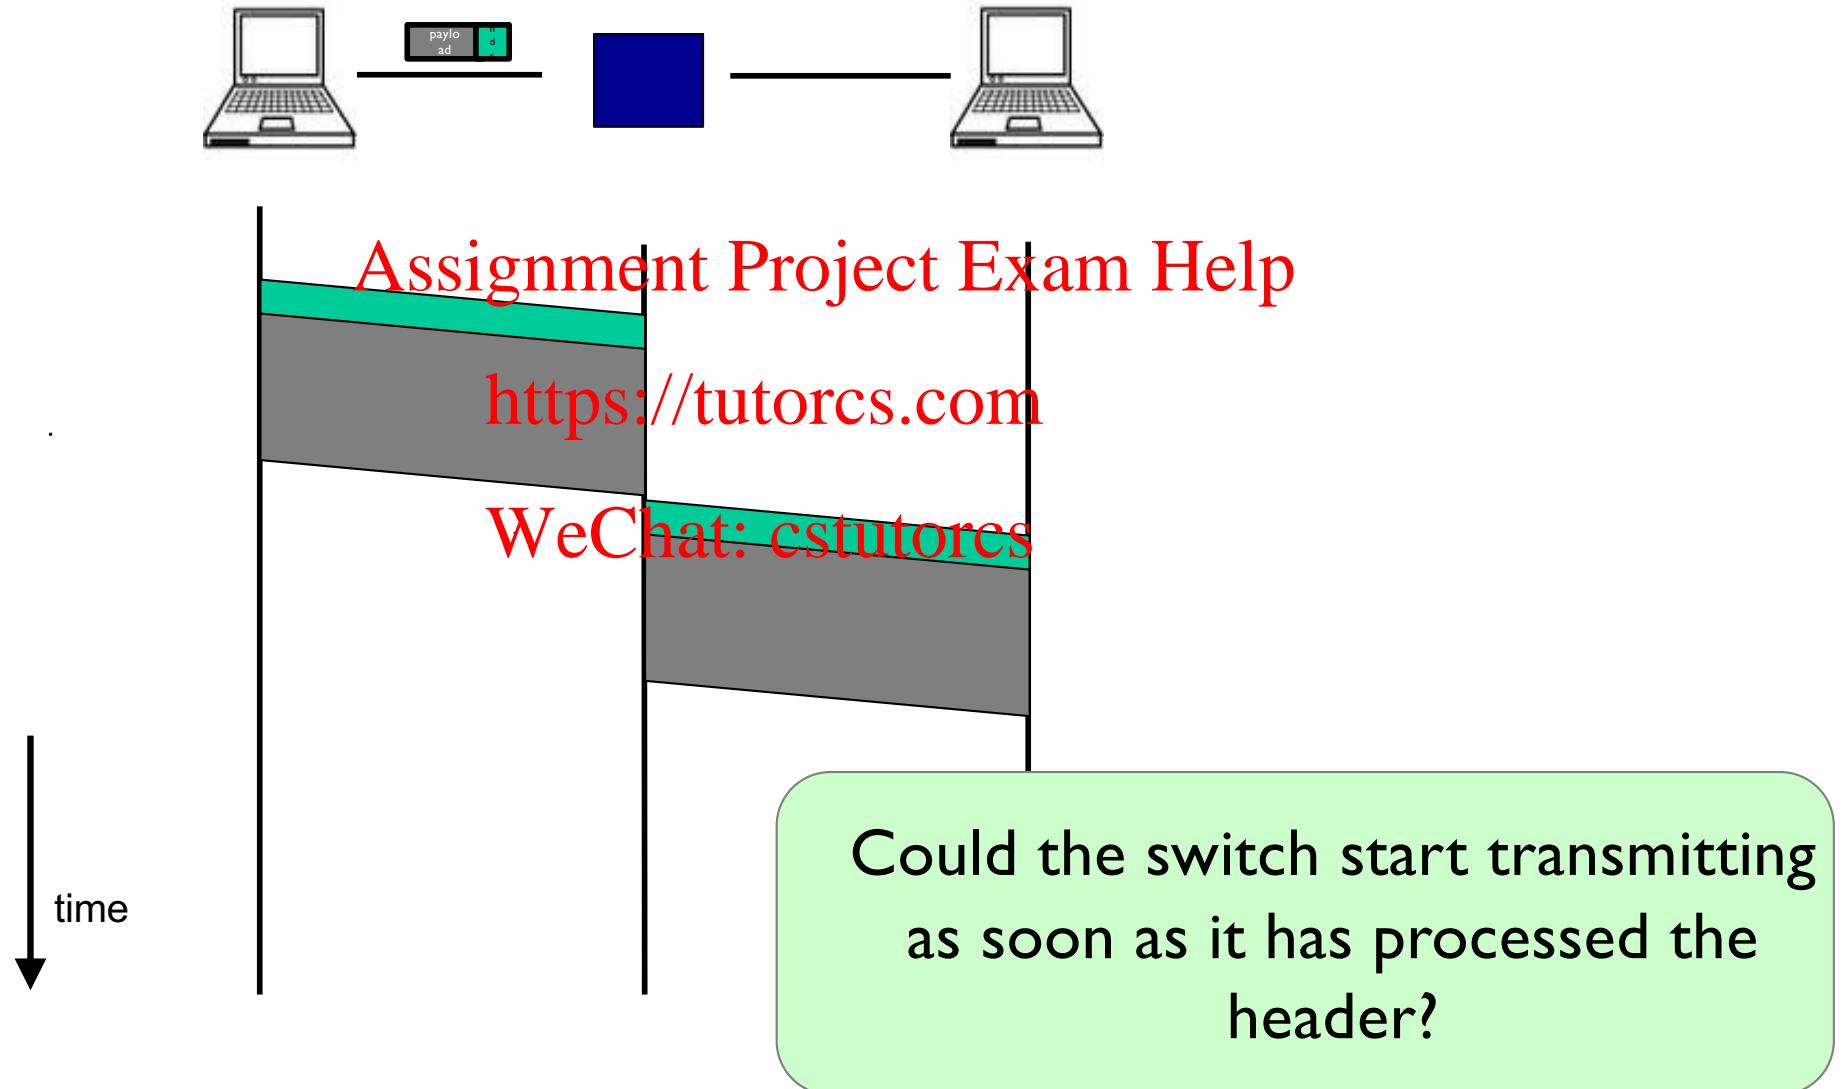

Switches forward packets

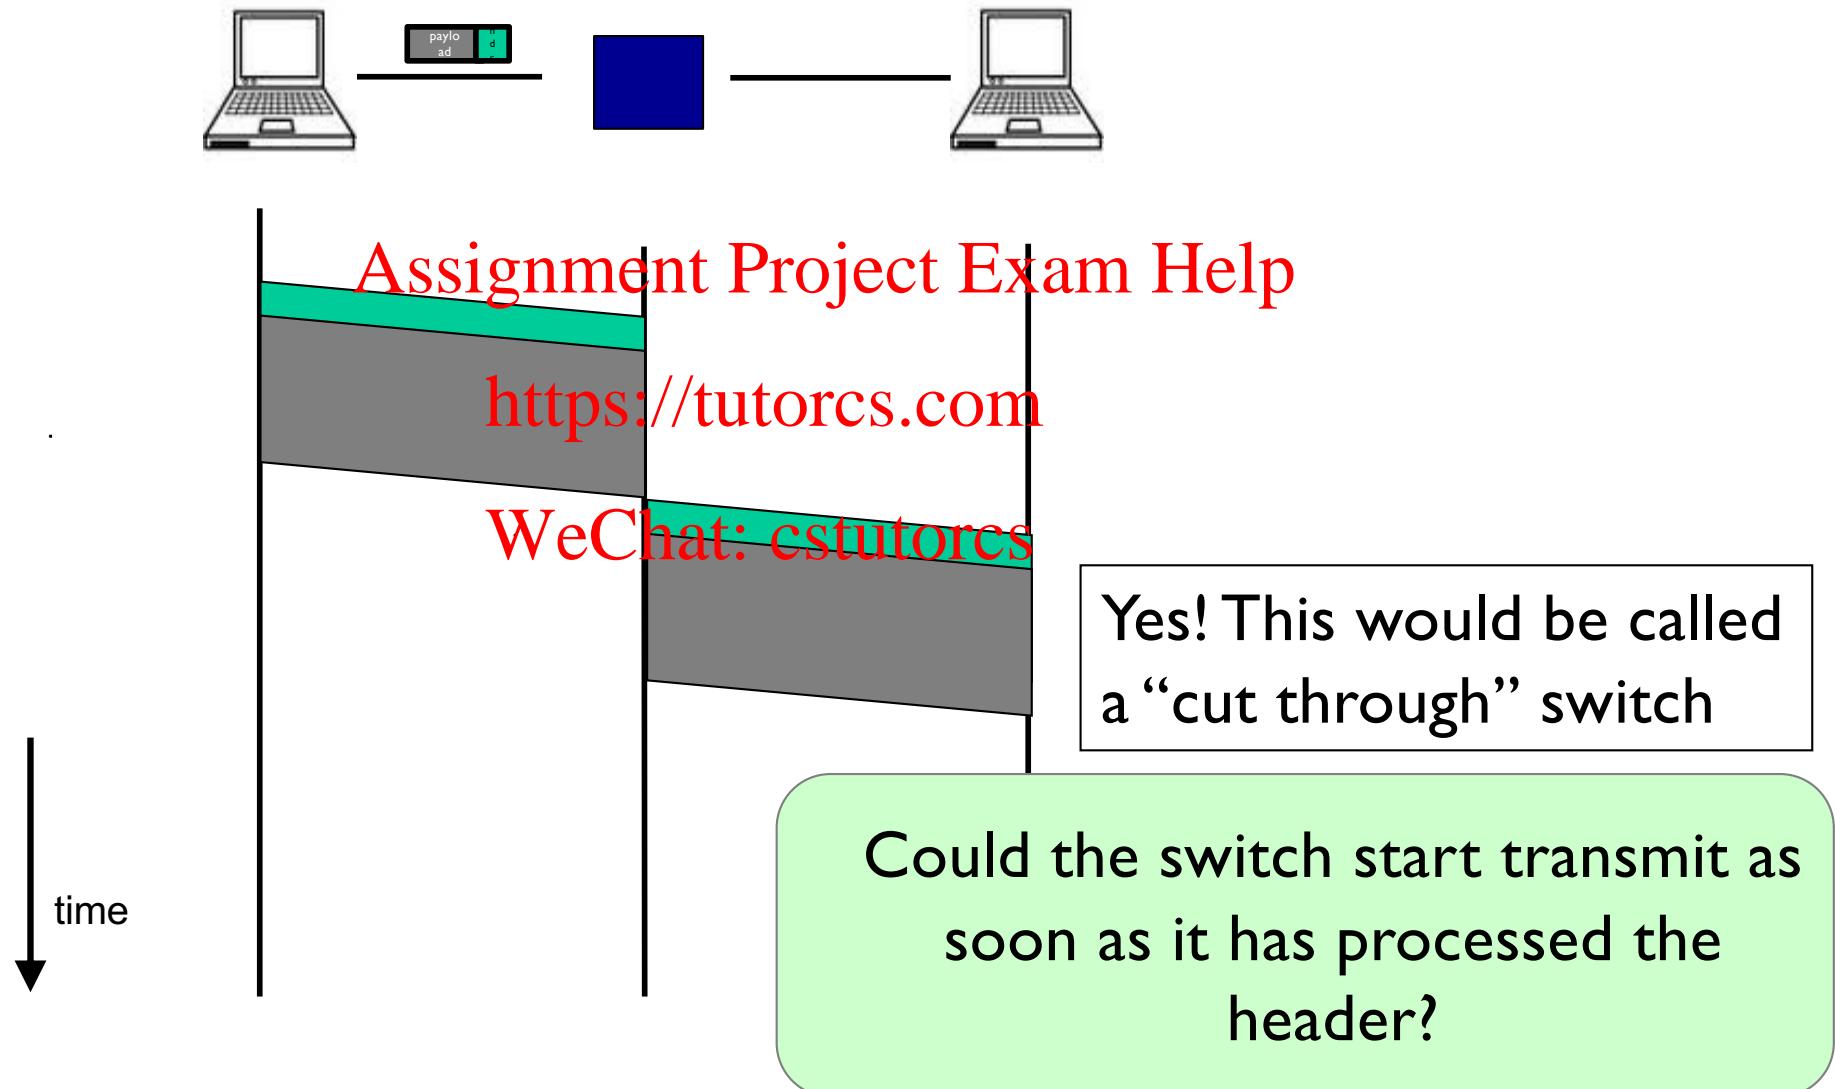

Timing in Packet Switching

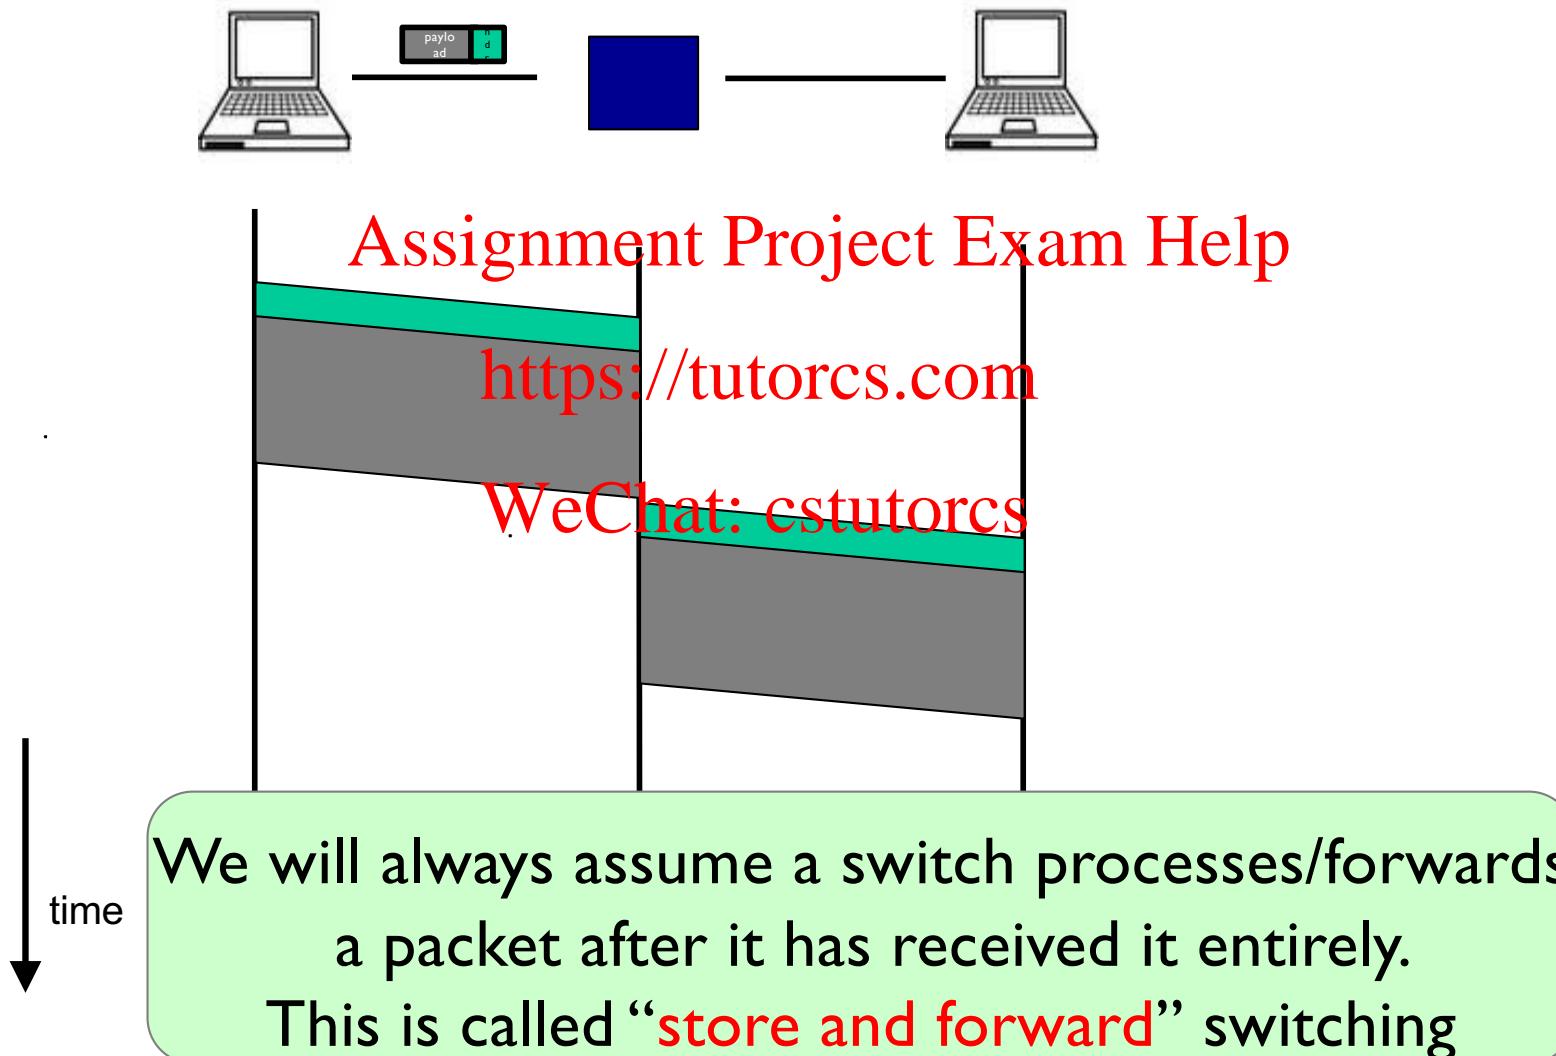

Timing in Packet Switching

Timing in Packet Switching

Timing in Packet Switching

Packet Switching

- ❖ Data is sent as chunks of formatted bits (Packets)
- ❖ Packets consist of a “header” and “payload”
- ❖ Switches “forward” packets based on their headers

<https://tutorcs.com>

WeChat: cstutorcs

Packet Switching

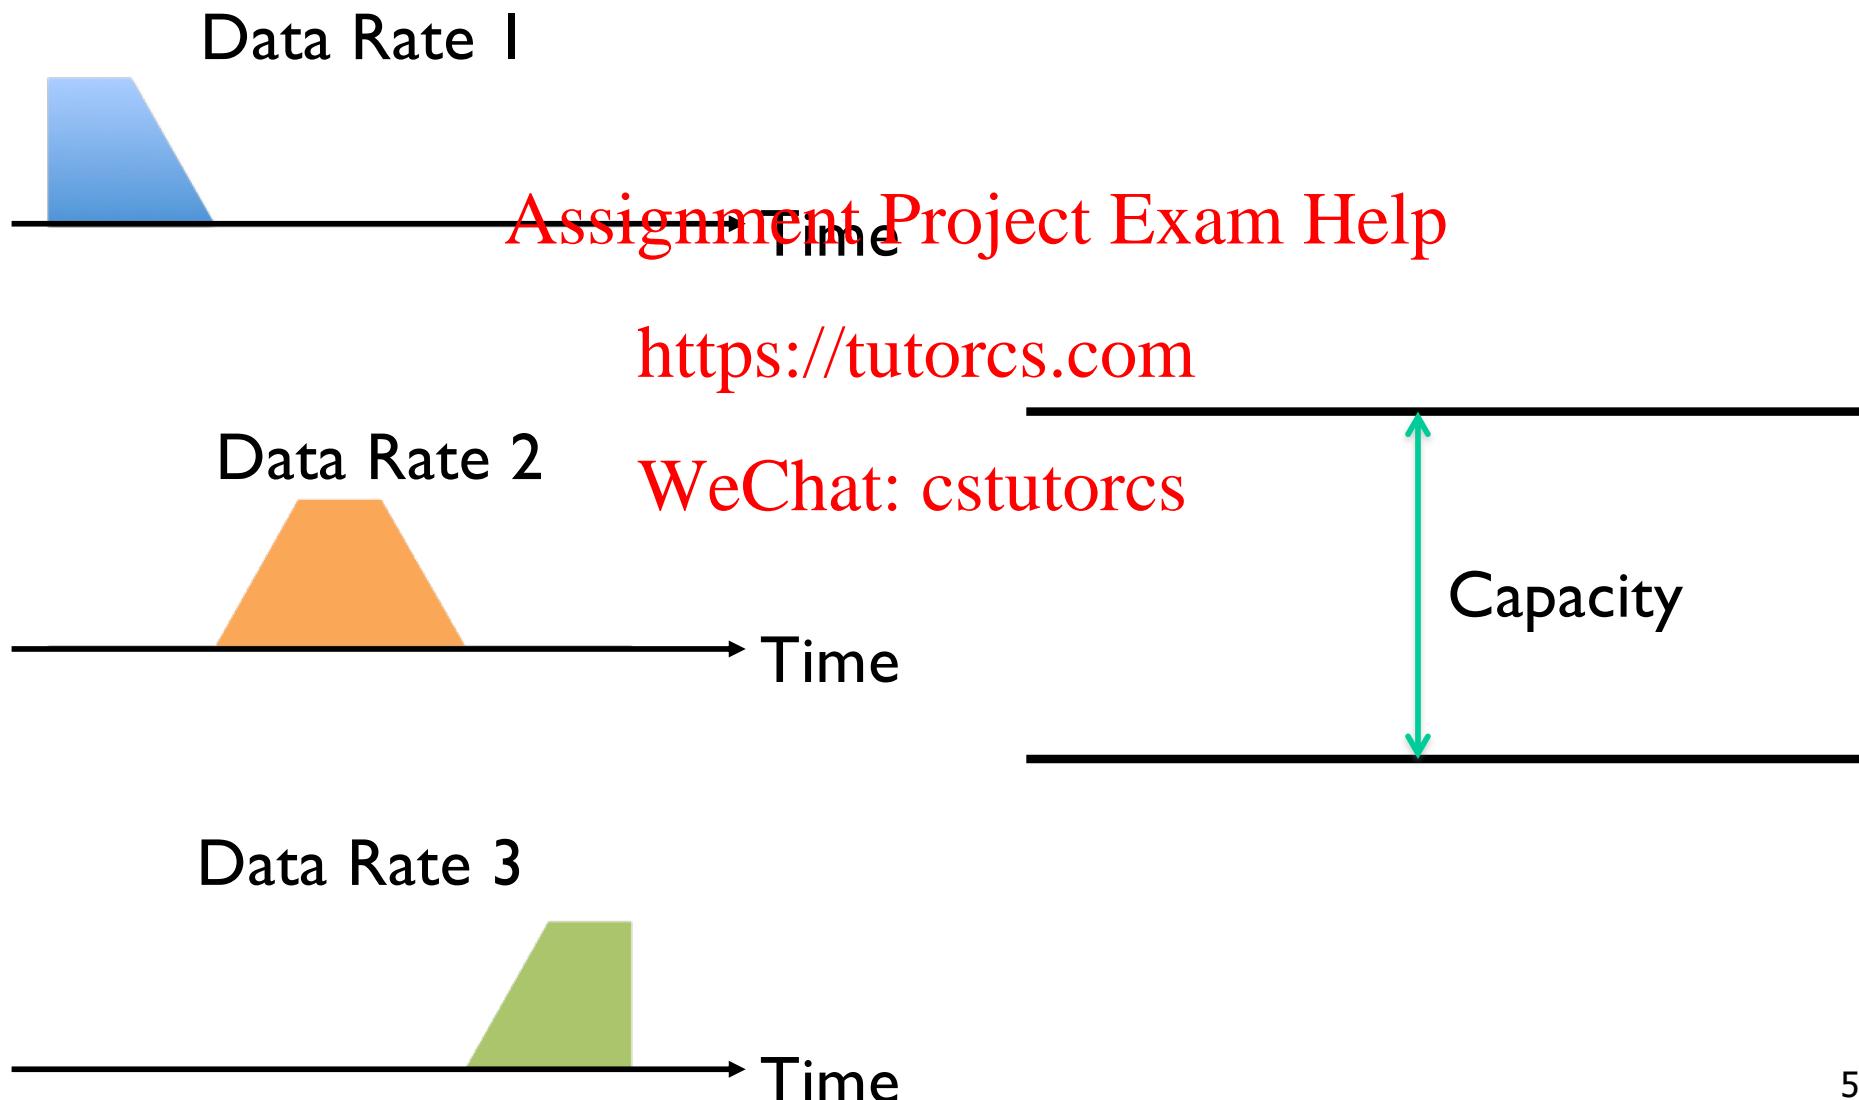

- ❖ Data is sent as chunks of formatted bits (Packets)
- ❖ Packets consist of a “header” and “payload”
- ❖ Switches “forward” packets based on their headers
- ❖ Each packet travels independently
 - no notion of packets belonging to a “circuit”

WeChat: cstutorcs

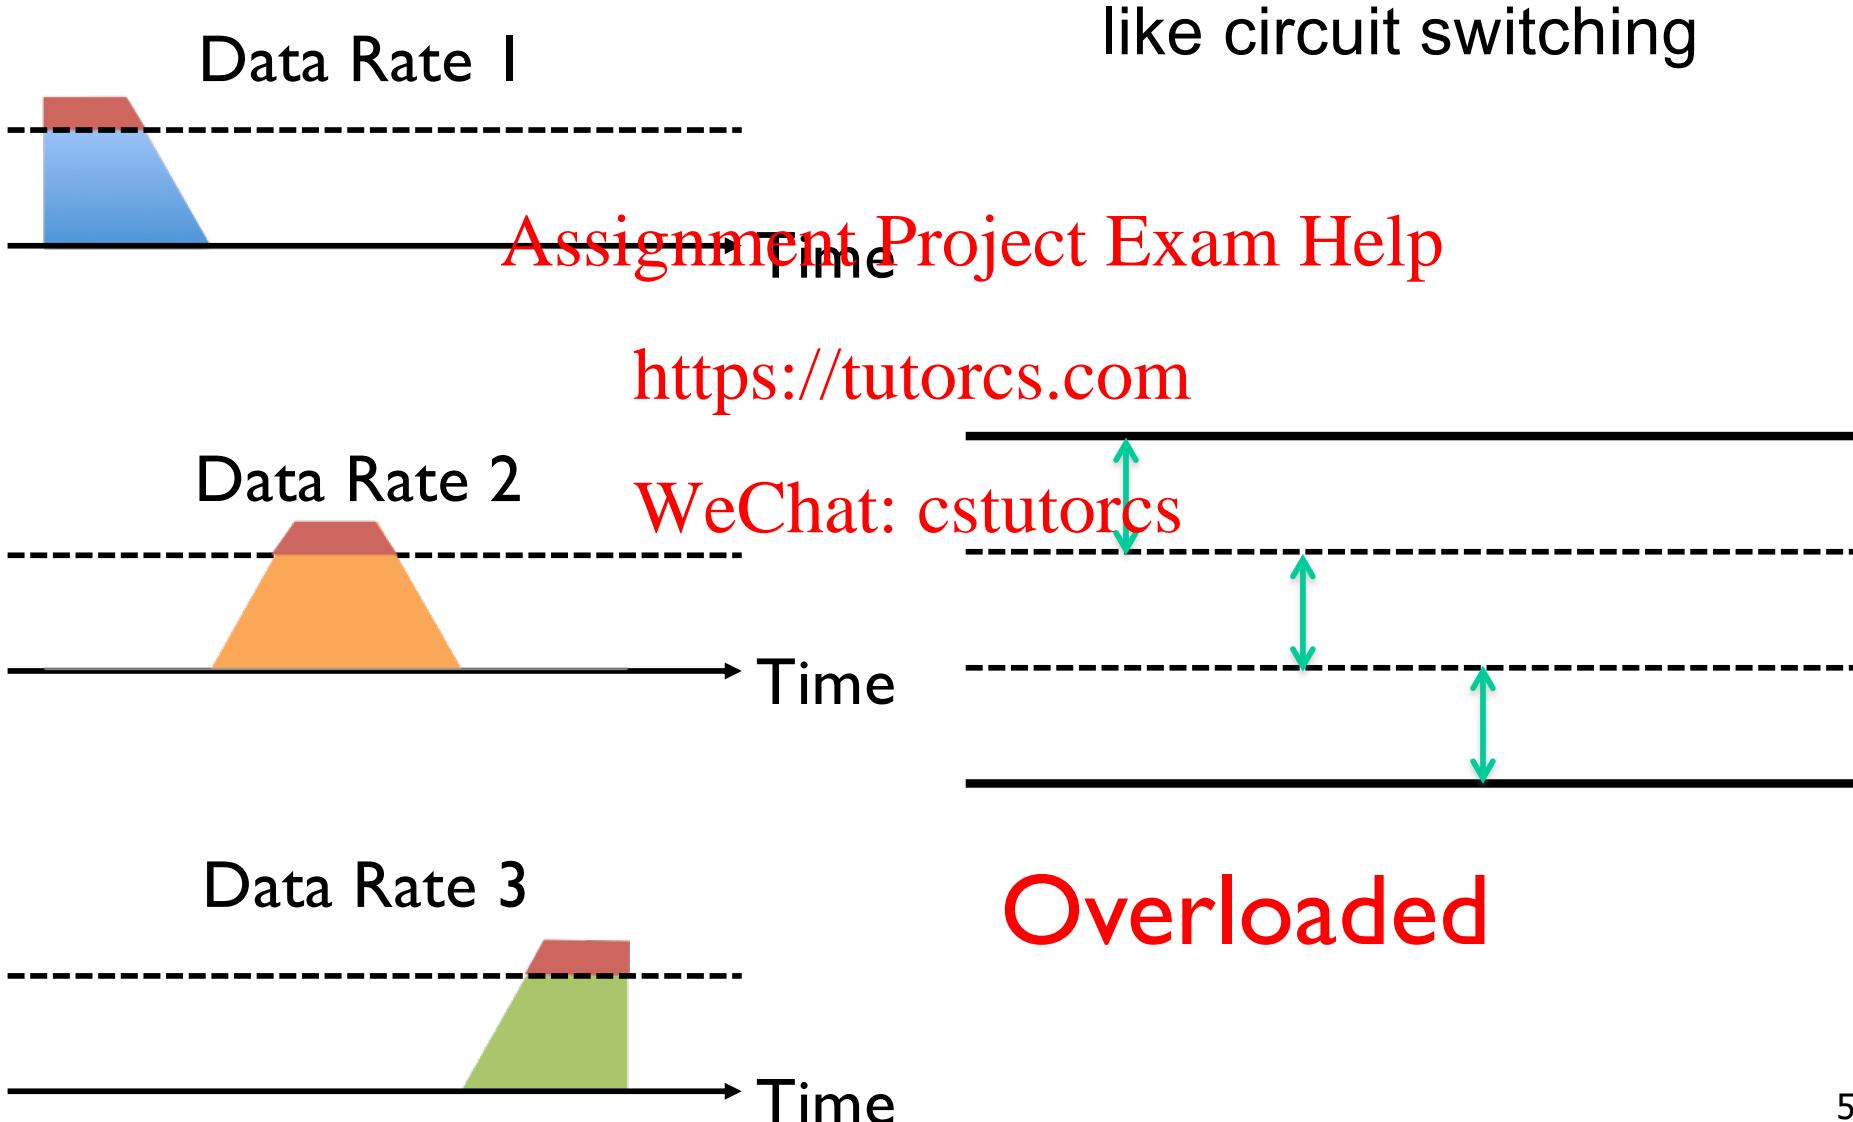

Packet Switching

- ❖ Data is sent as chunks of formatted bits (Packets)
- ❖ Packets consist of a “header” and “payload”
- ❖ Switches “forward” packets based on their headers
- ❖ Each packet travels independently
- ❖ No link resources are reserved in advance. Instead, packet switching leverages statistical multiplexing

Three Flows with Bursty Traffic

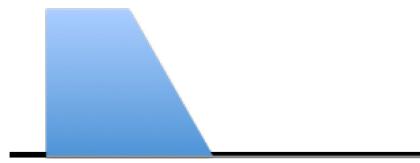

When Each Flow Gets 1/3rd of Capacity

When Flows Share Total Capacity

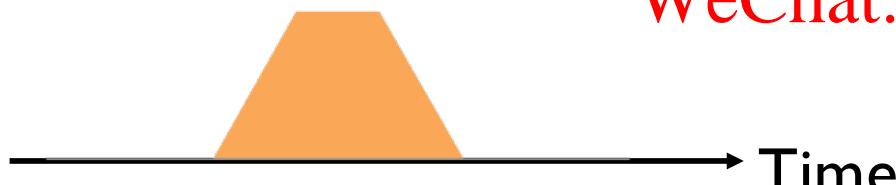

packet switching

Assignment Project Exam Help

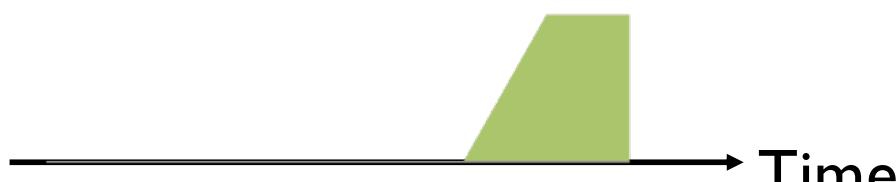

<https://tutordocs.com> No overloading

WeChat: cstutorcs

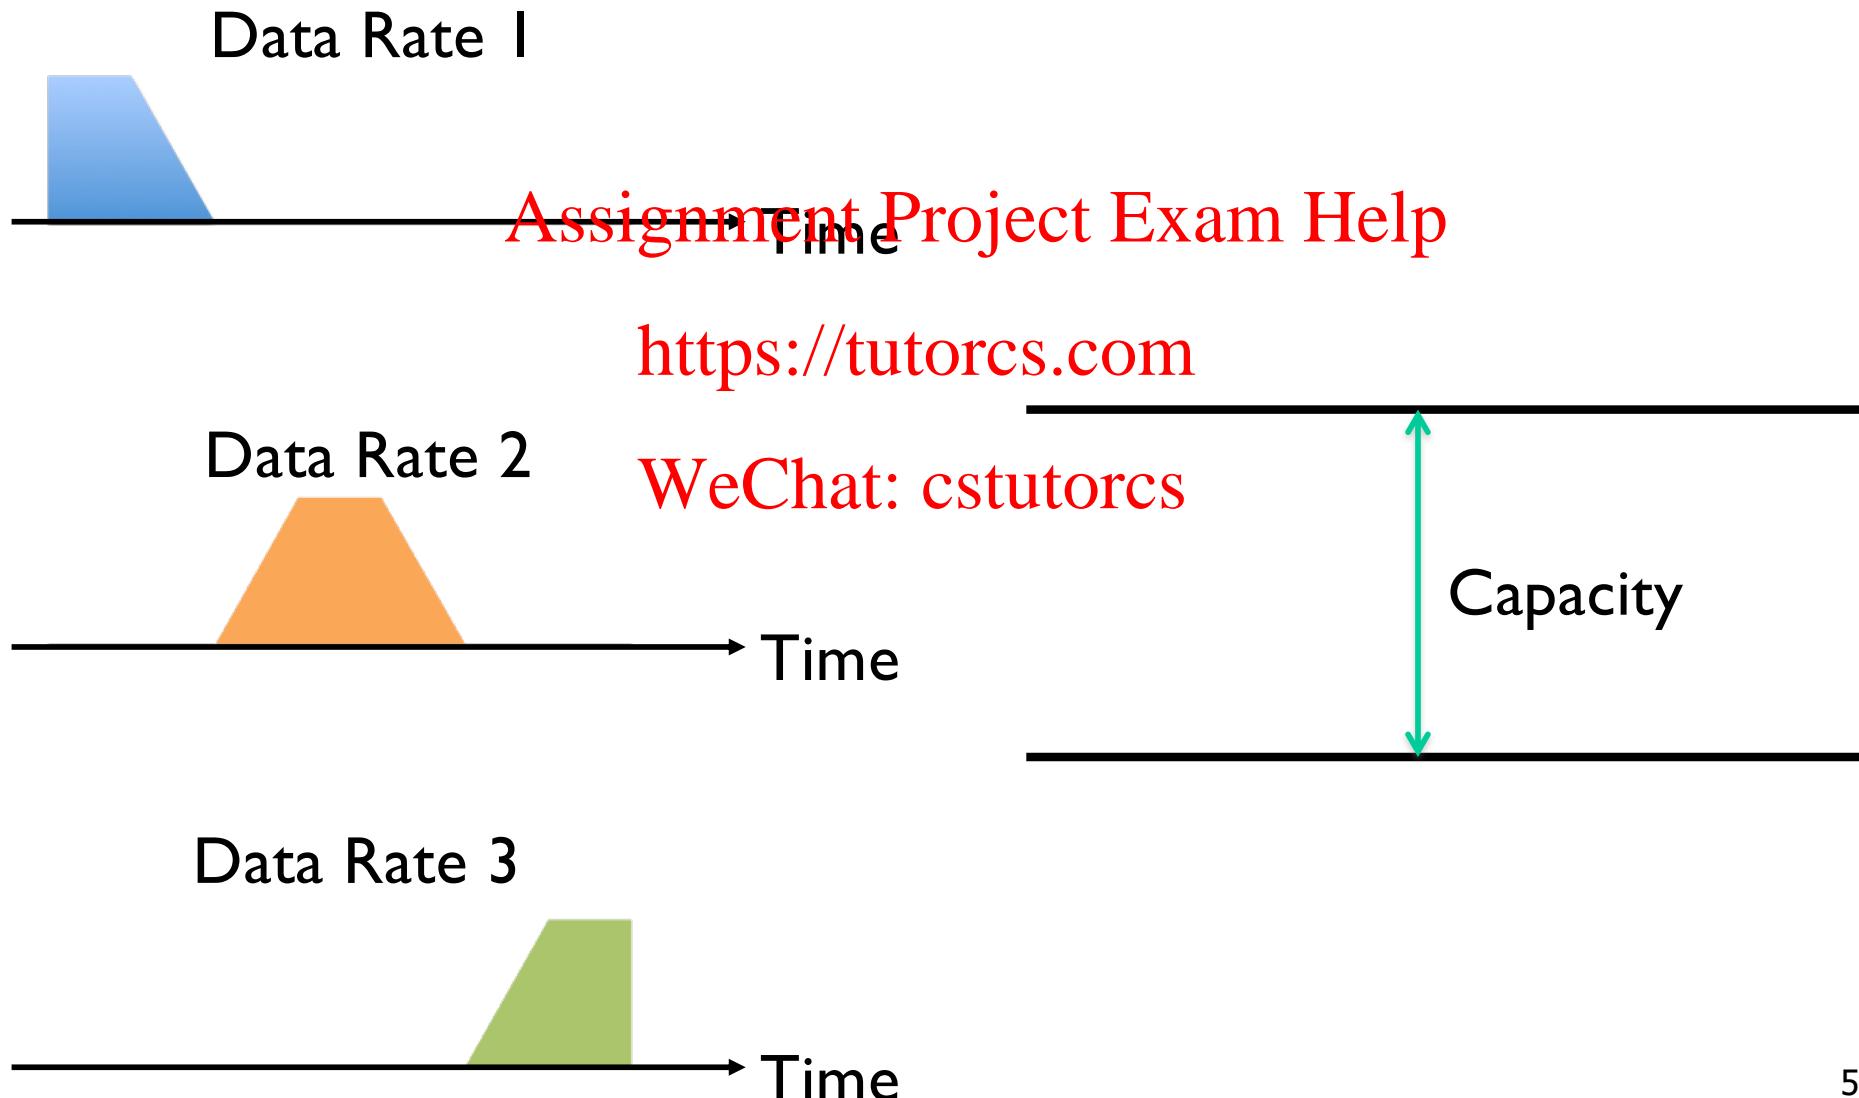

Statistical multiplexing relies on the assumption that not all flows burst at the same time

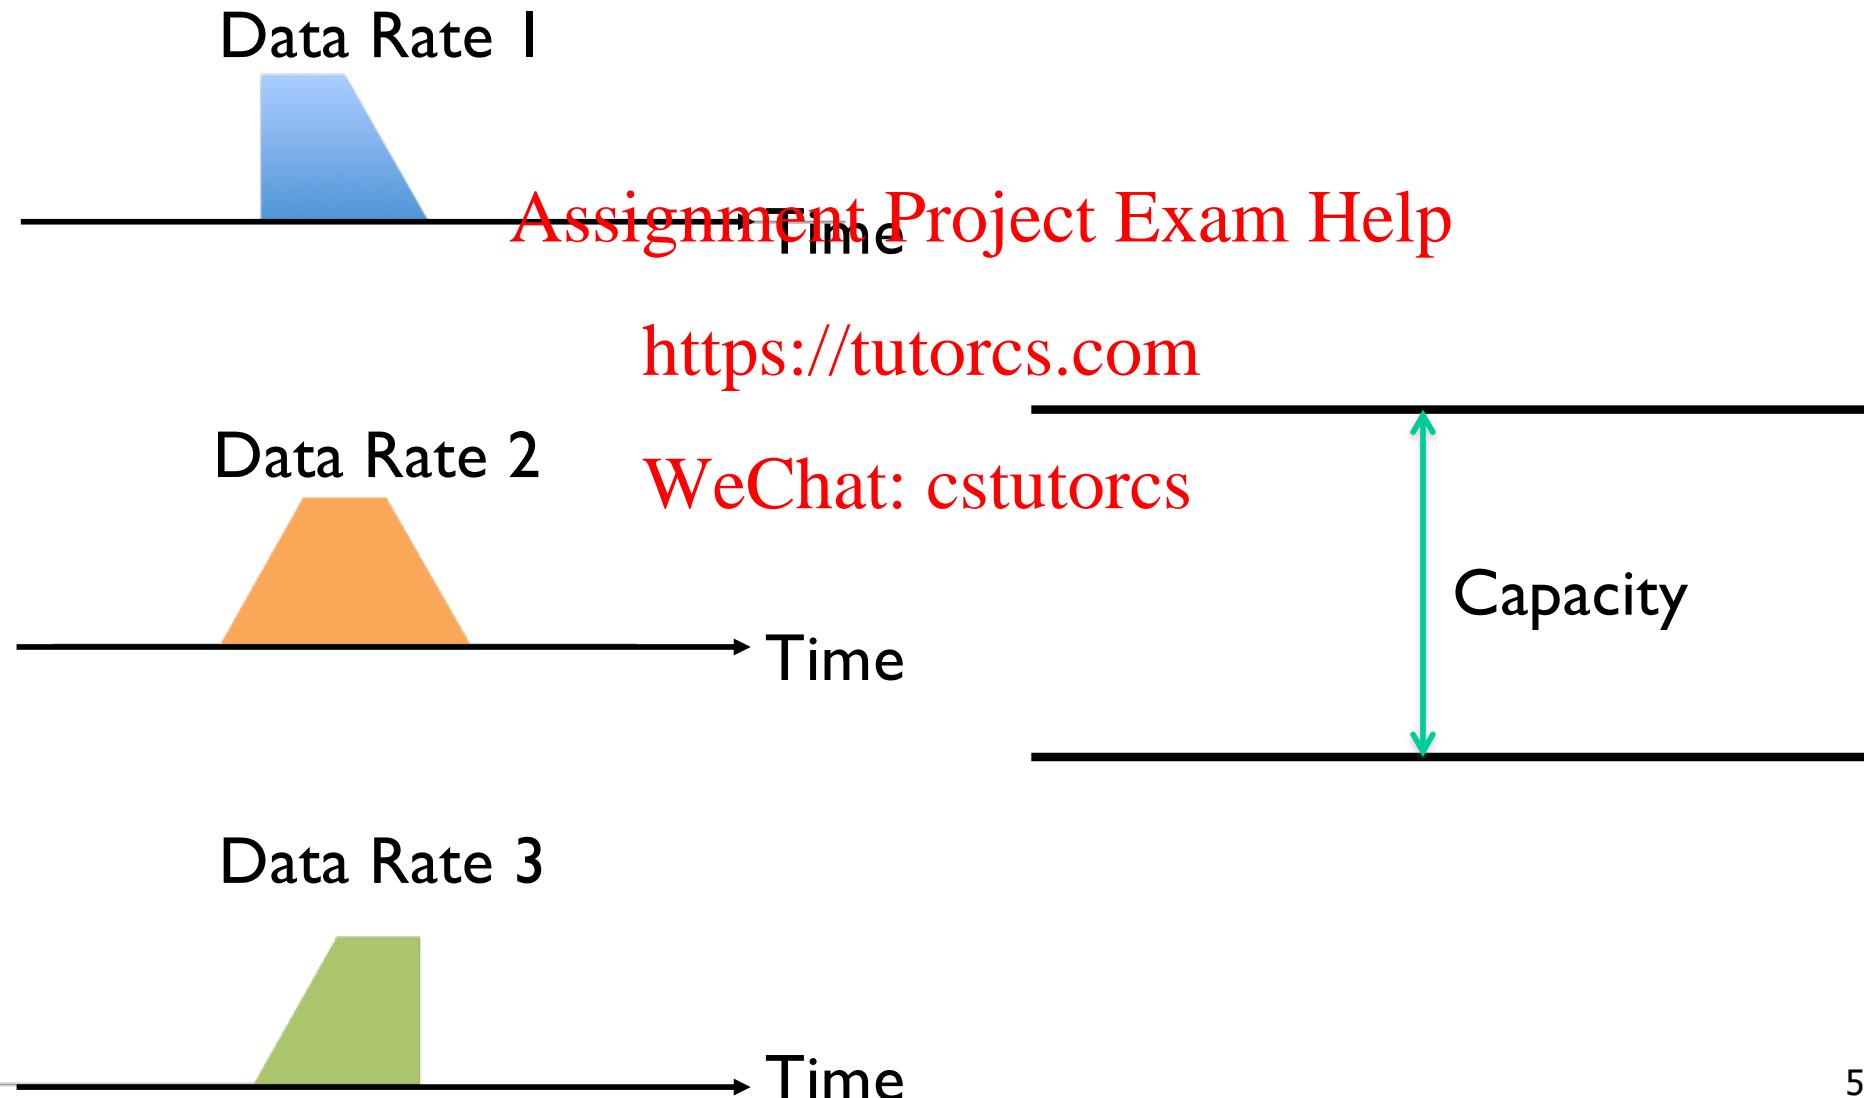

Very similar to insurance, and has same failure case

Three Flows with Bursty Traffic

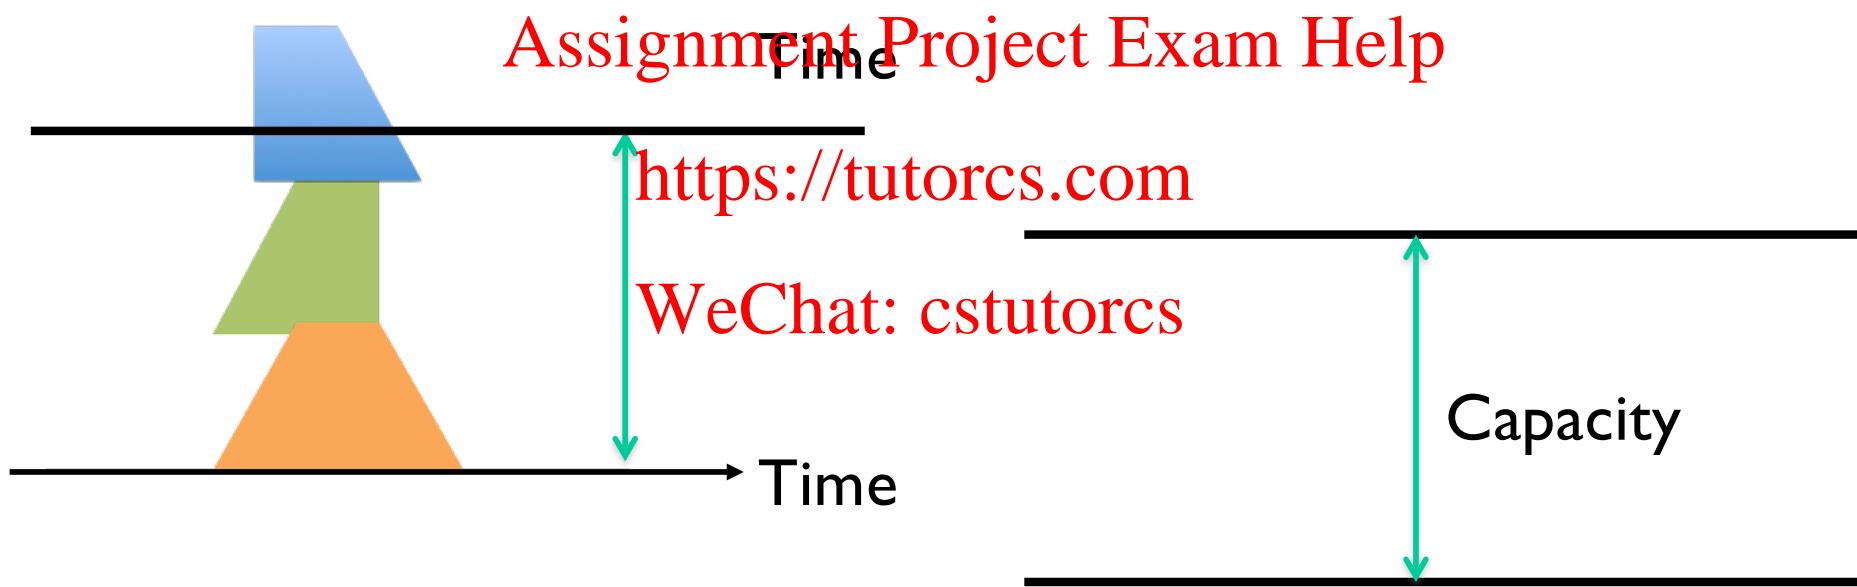

Three Flows with Bursty Traffic

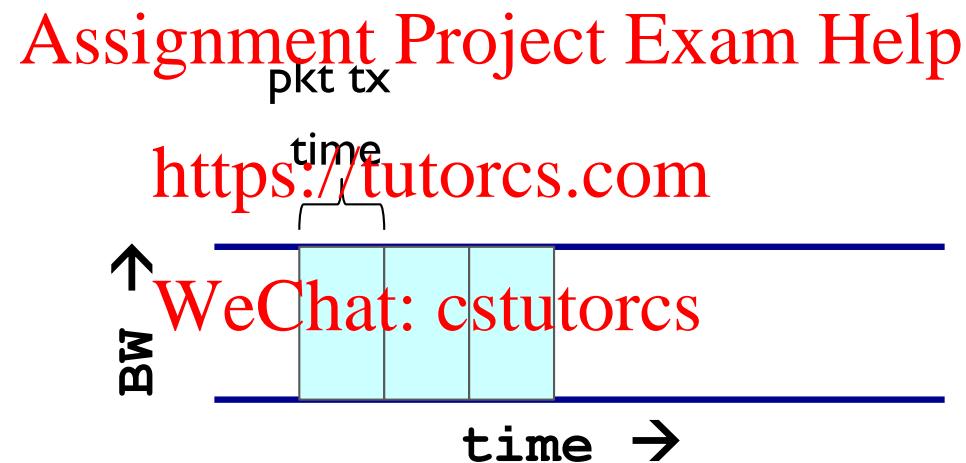

Three Flows with Bursty Traffic

Data Rate 1+2+3 >> Capacity

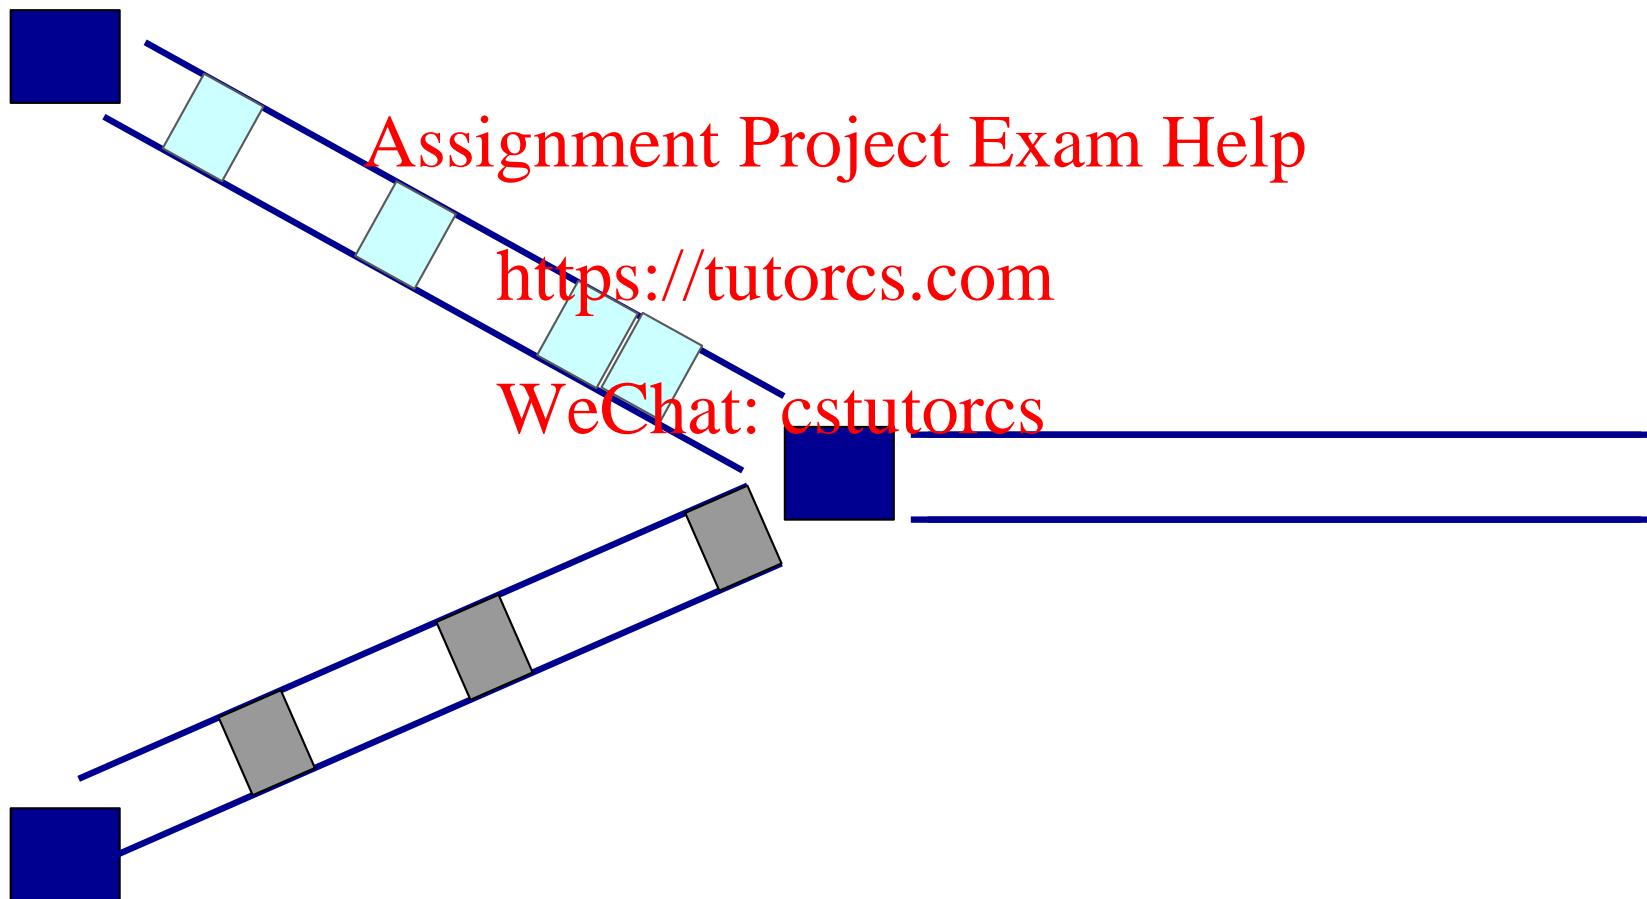

What do we do under overload?

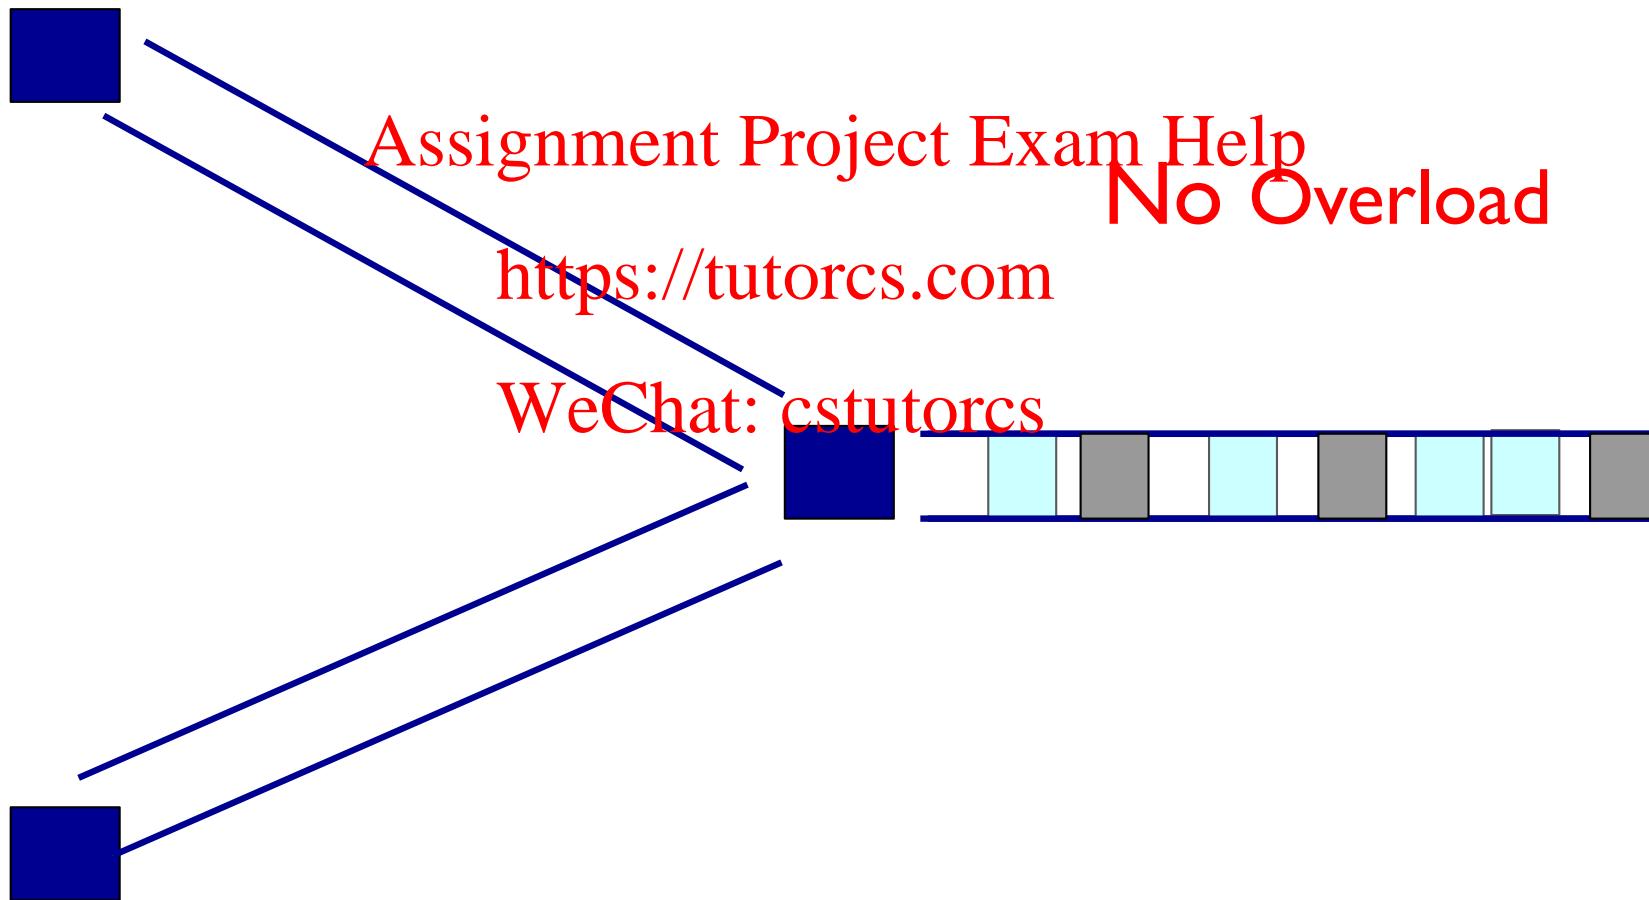

Statistical multiplexing: pipe view

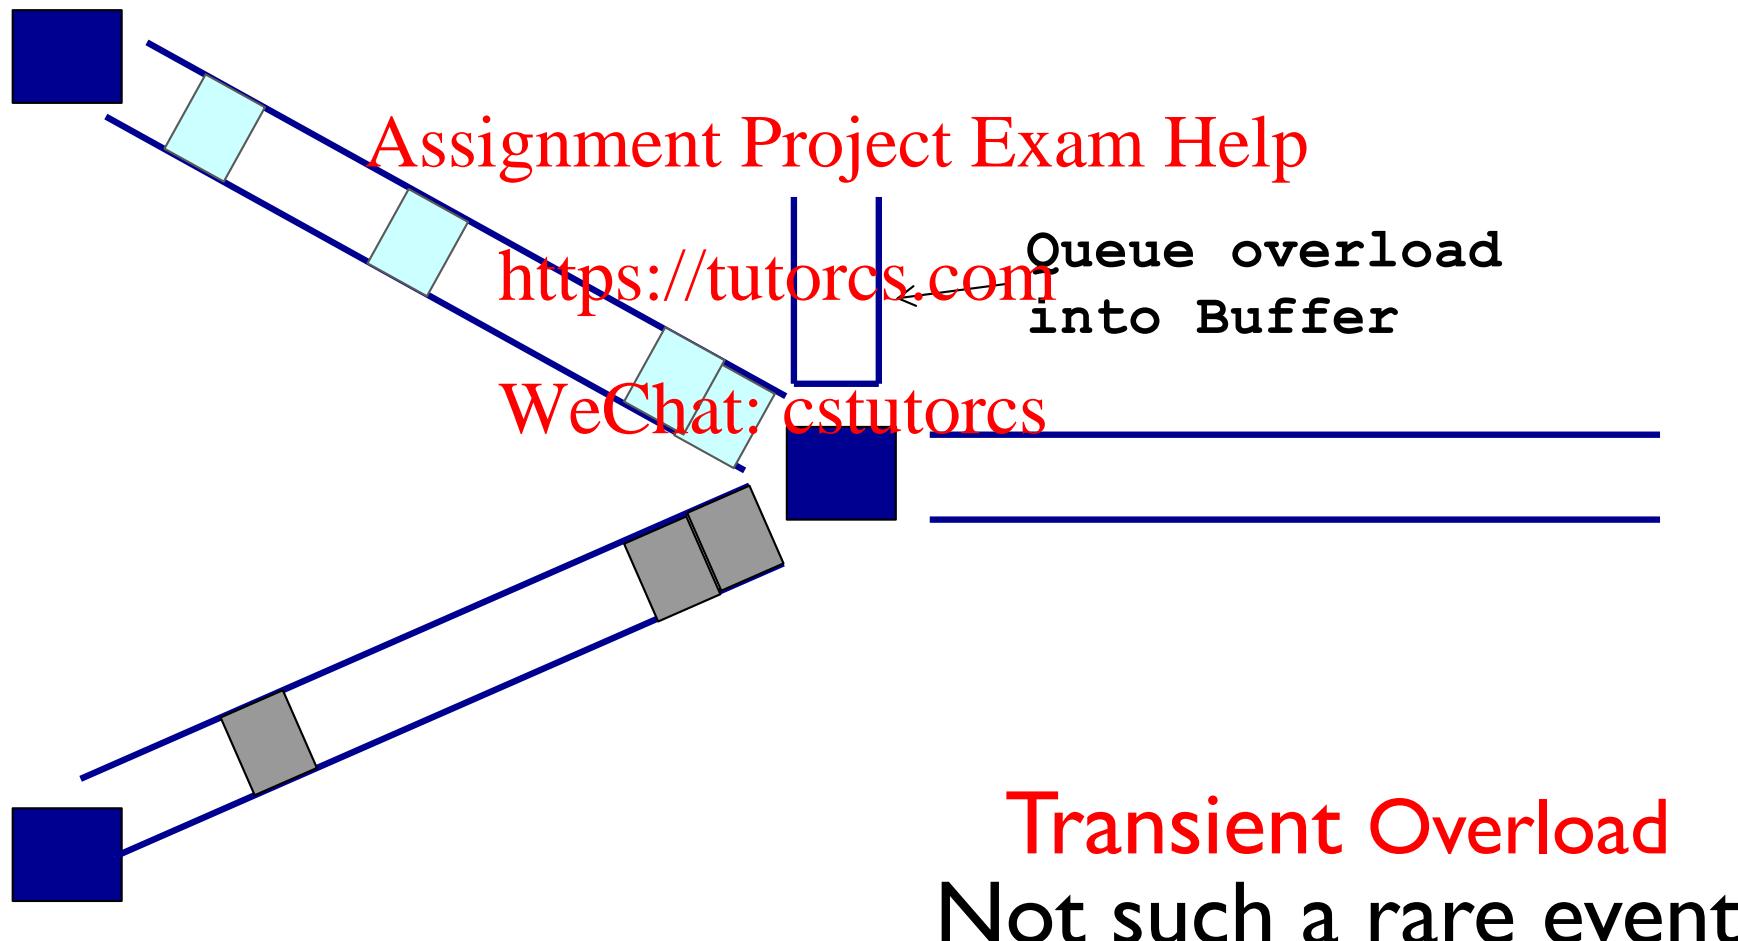

Statistical multiplexing: pipe view

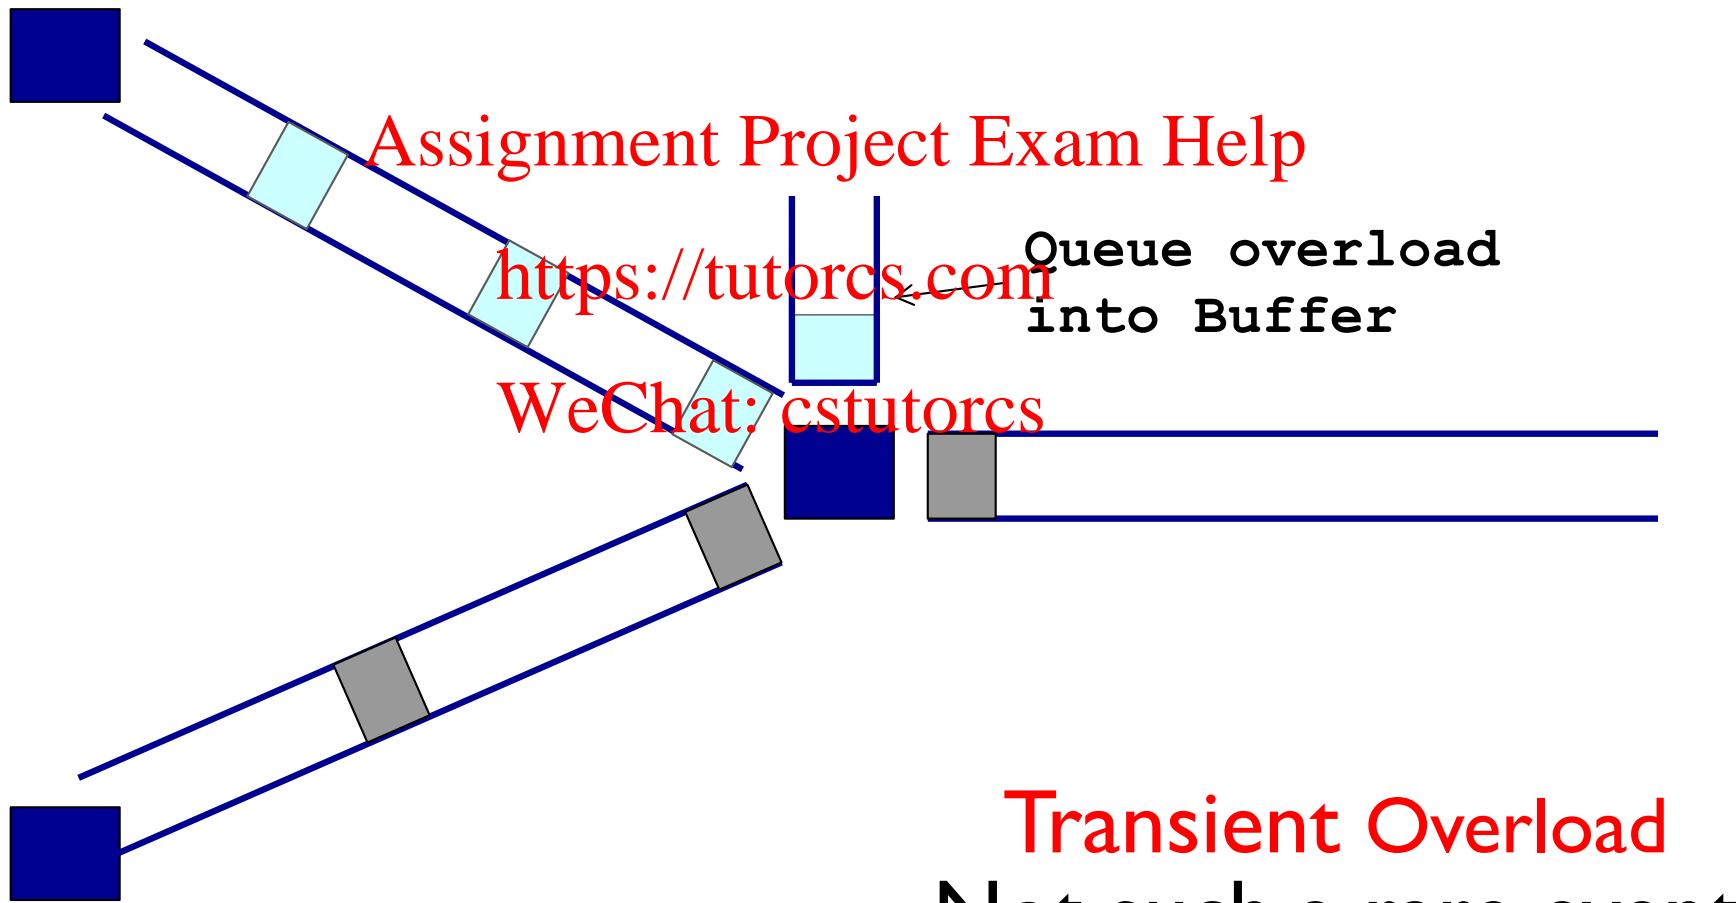

Statistical multiplexing: pipe view

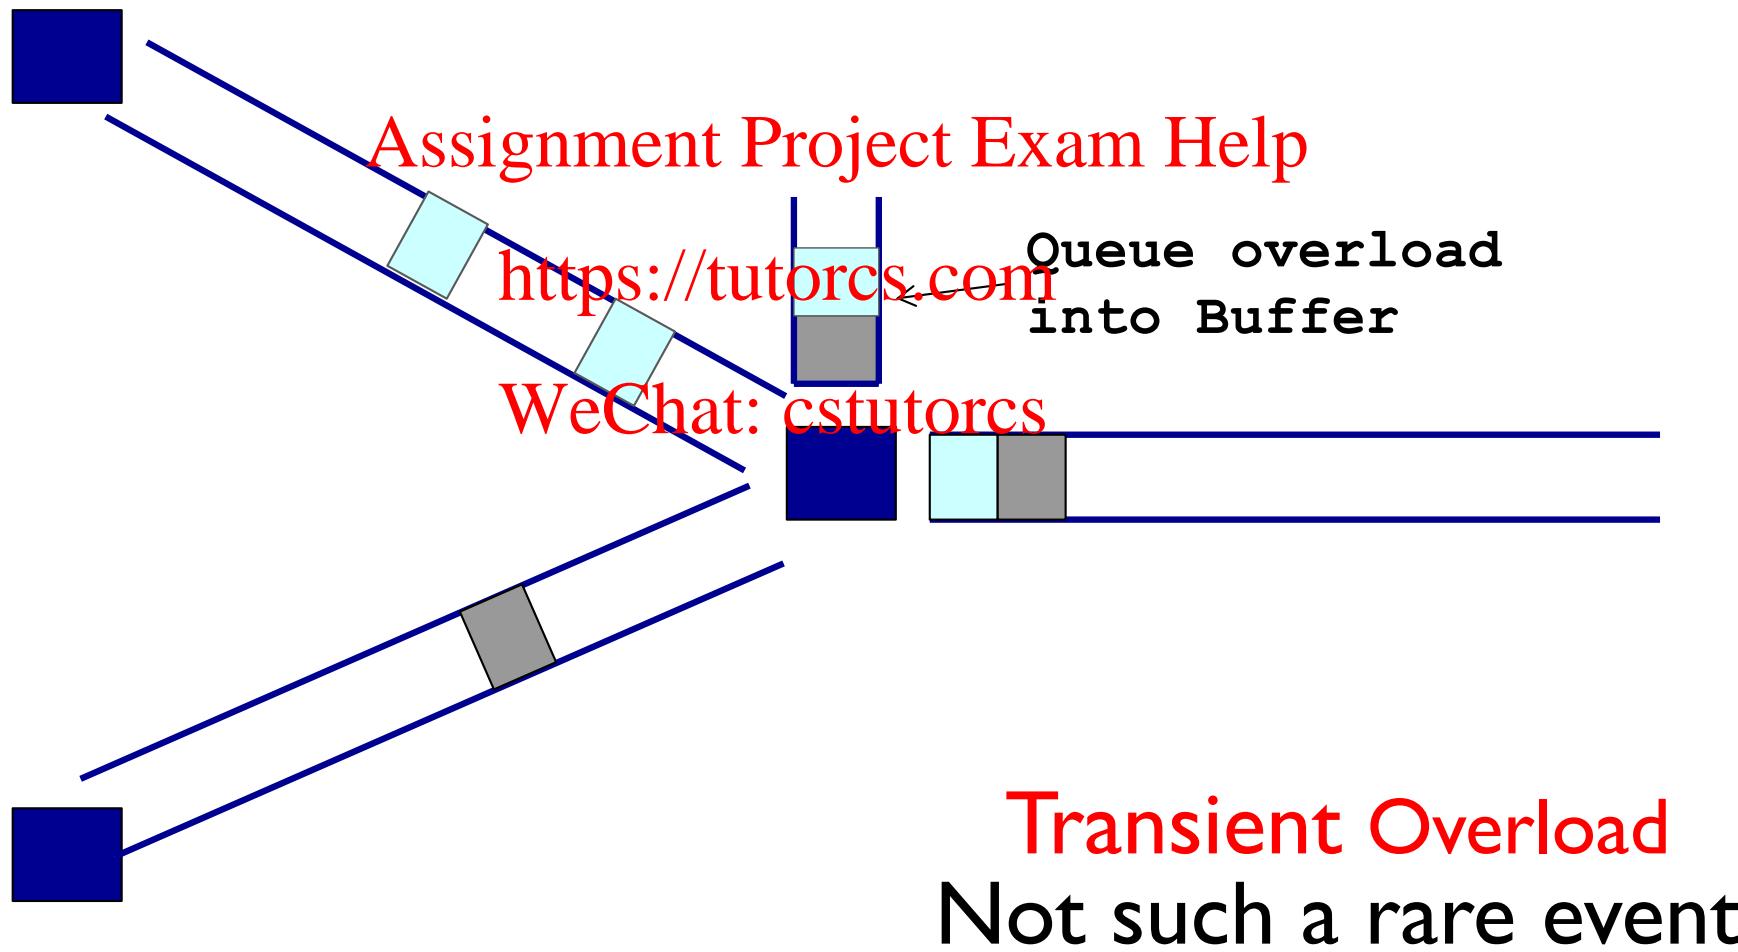

Statistical multiplexing: pipe view

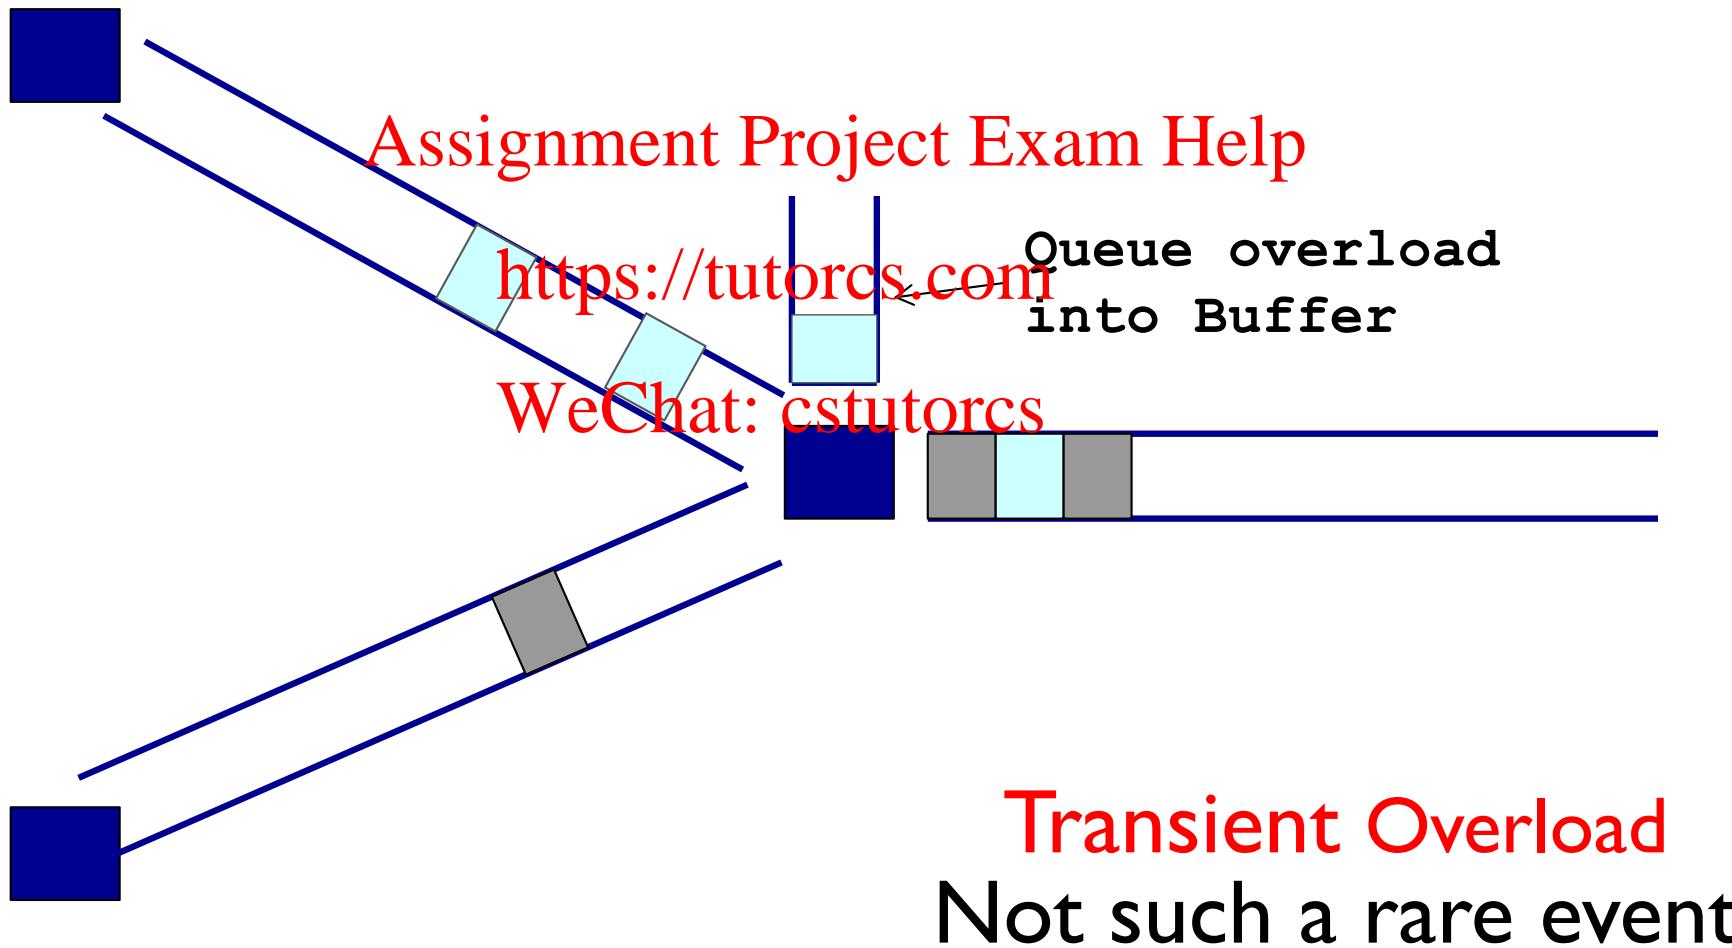

Statistical multiplexing: pipe view

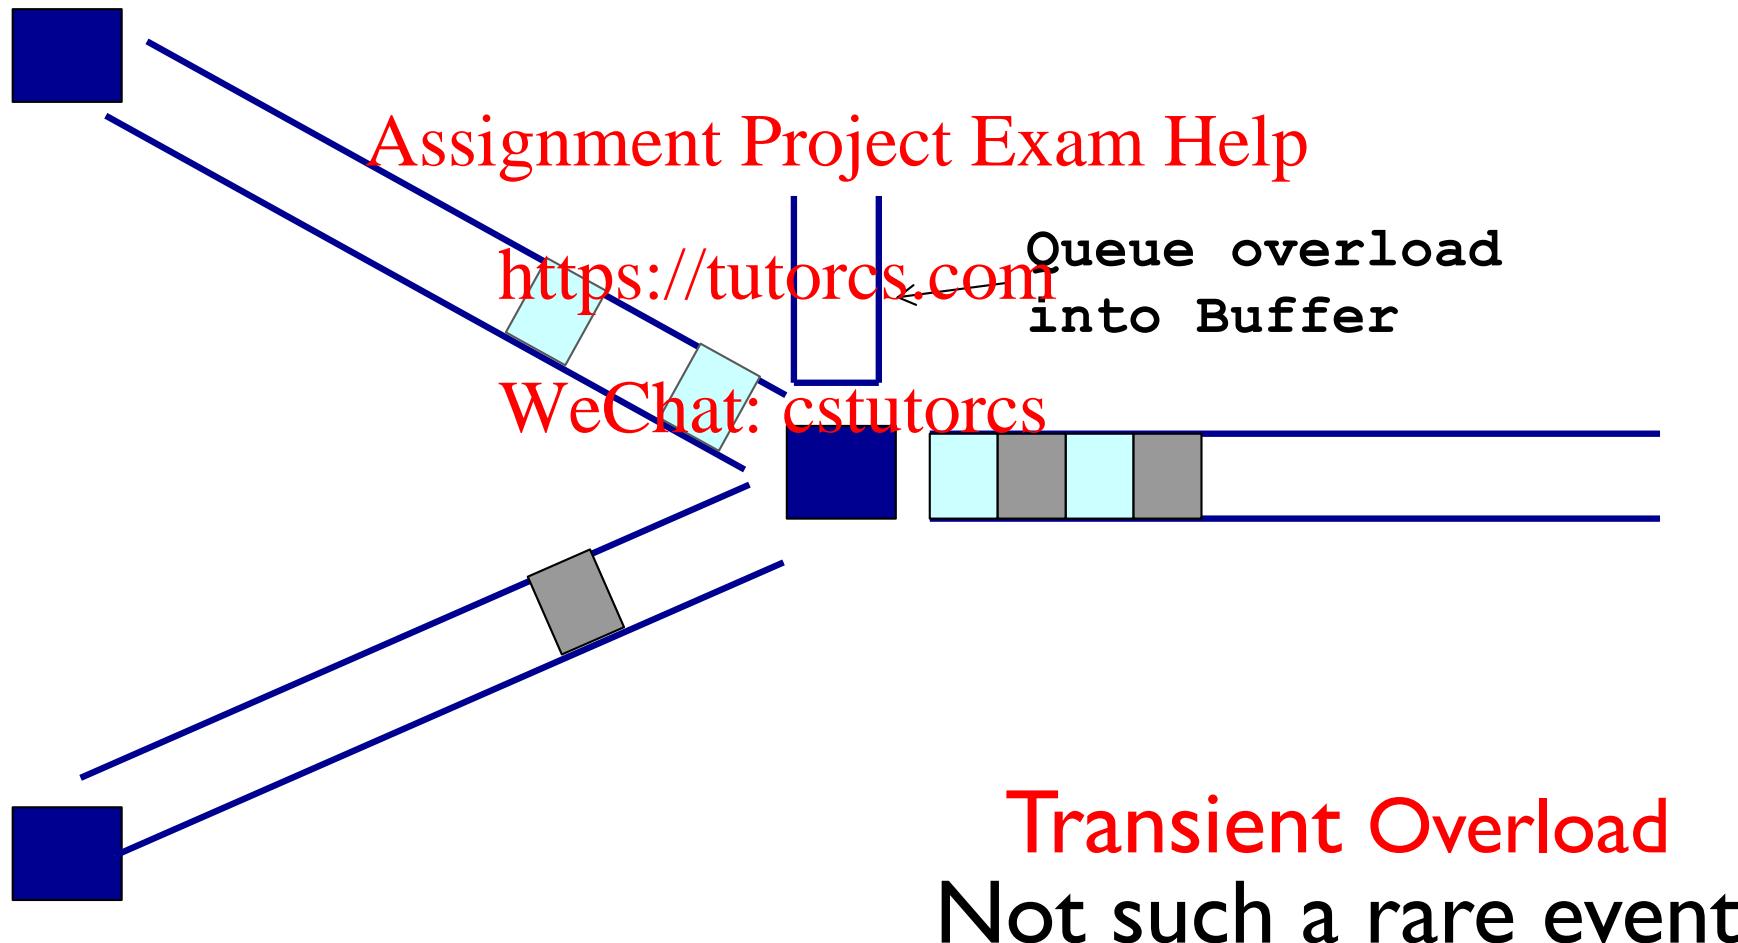

Statistical multiplexing: pipe view

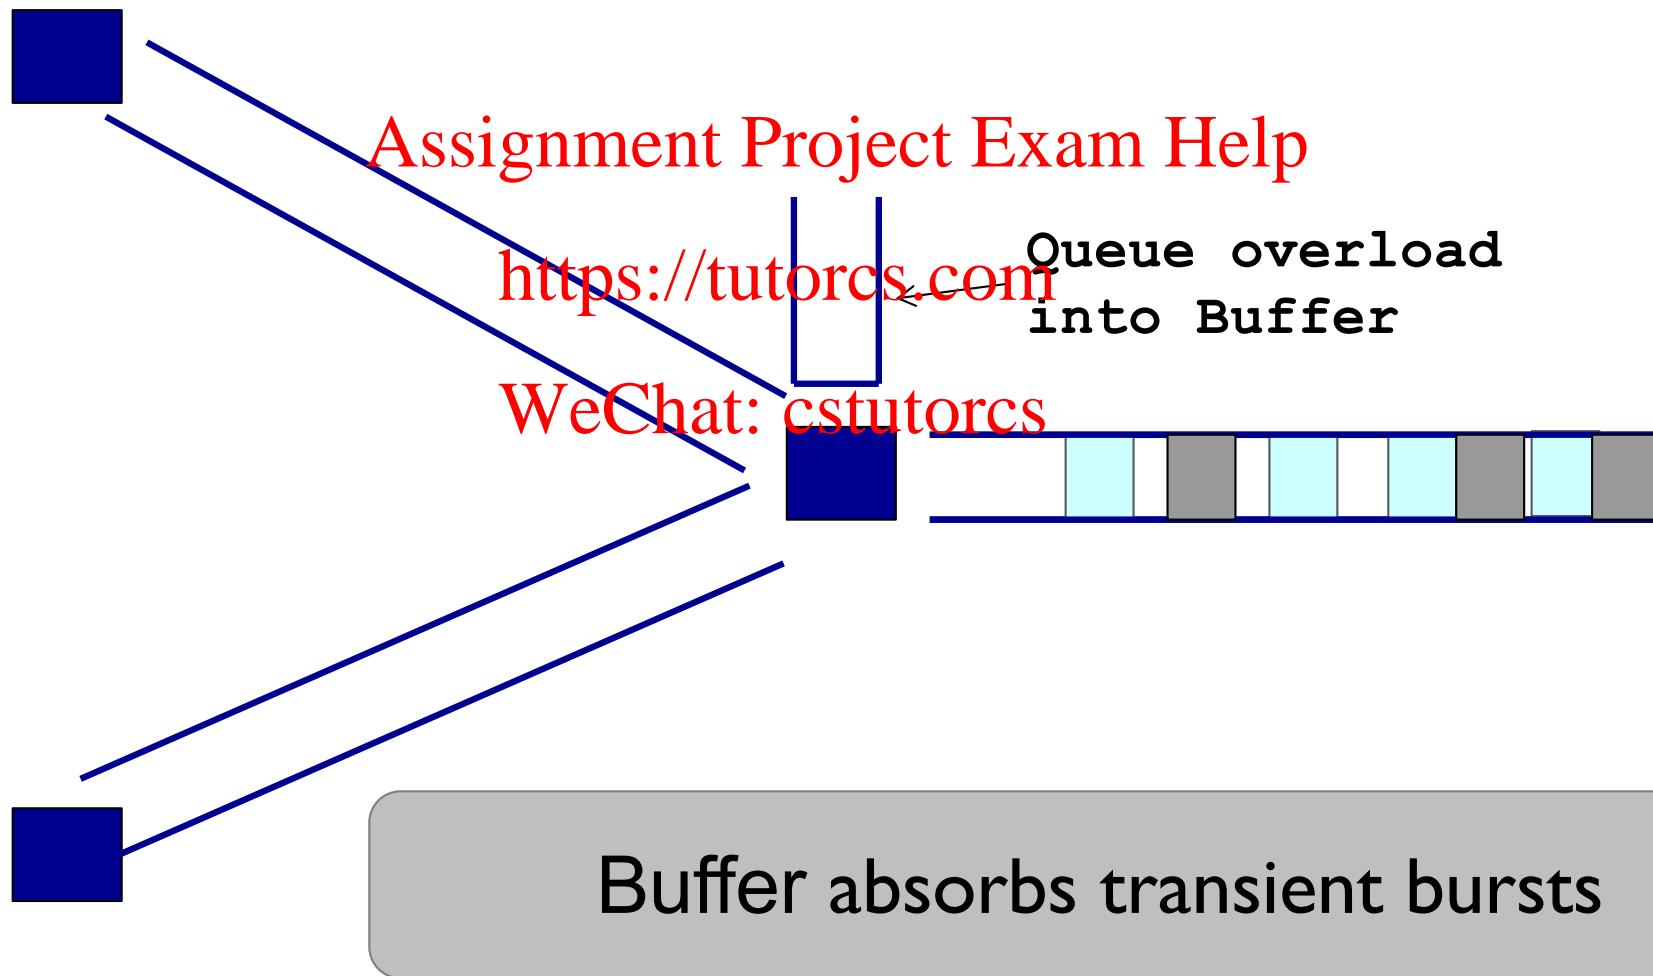

Statistical multiplexing: pipe view

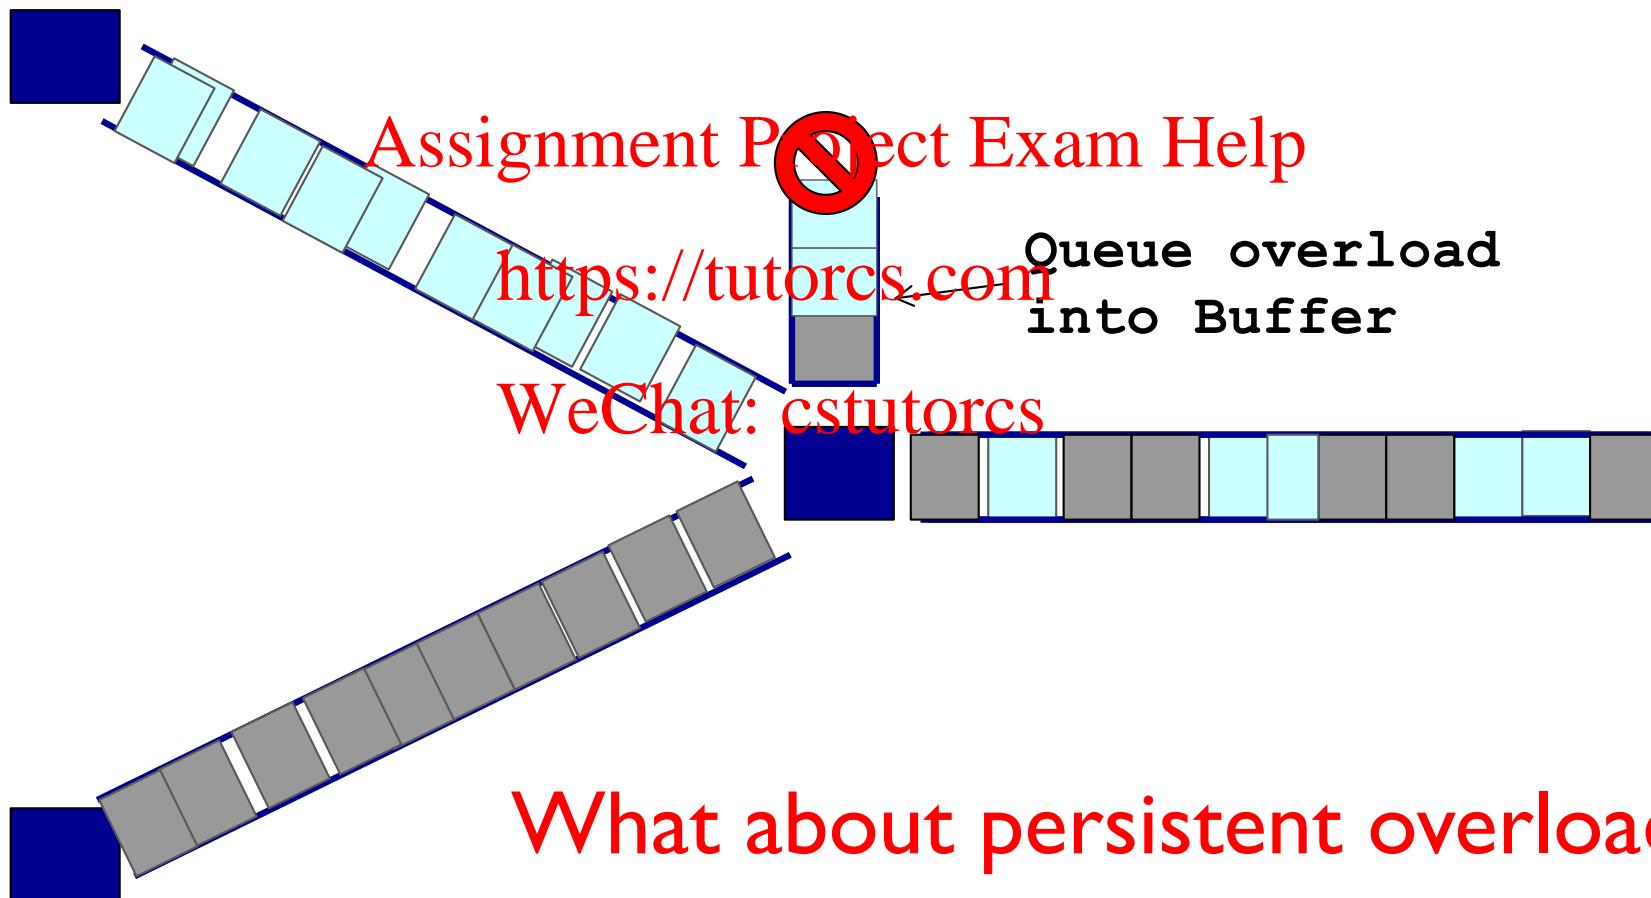

Statistical multiplexing: pipe view

Statistical multiplexing: pipe view

Statistical multiplexing: pipe view

Packet switching versus circuit switching

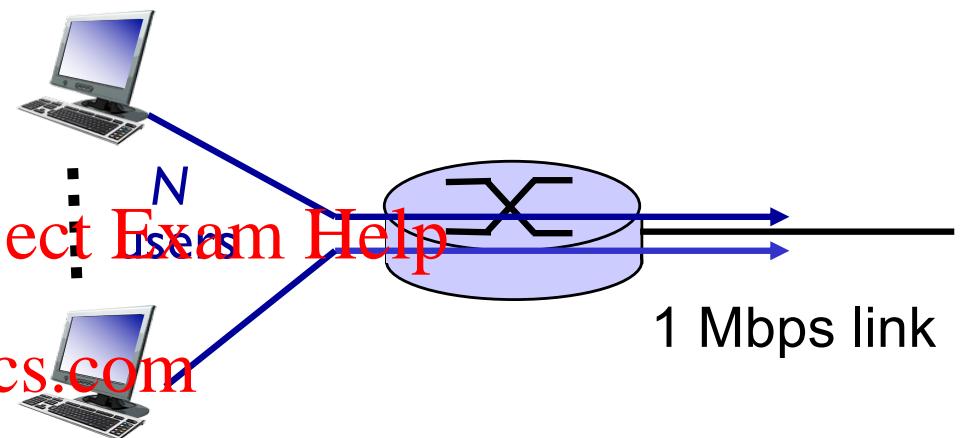

packet switching allows more users to use network!

example:

- 1 Mb/s link
- each user:
 - 100 kb/s when "active"
 - active 10% of time

Assignment Project Exam Help

<https://tutorcs.com>

❖ *circuit-switching:*

- 10 users

WeChat: cstutorcs

Q: how did we get value 0.0004?

❖ *packet switching:*

- with 35 users, probability > 10 active at same time is less than .0004

Q: what happens if > 35 users
say 70?

Hint: Bernoulli Trials and Binomial Distribution

Binomial Probability Distribution

- ❖ A fixed number of observations (trials), n
 - E.g., 5 tosses of a coin
- Assignment Project Exam Help
- ❖ Binary random variable
 - E.g., head or tail in a coin toss
 - Often called as success or failure
 - Probability of success is p and failure is $(1-p)$
- ❖ Constant probability for each observation

Binomial Distribution: Example

- ❖ Q: What is the probability of observing exactly 3 heads in a sequence of 5 coin tosses
- ❖ A:
Assignment Project Exam Help
 - One way to get exactly 3 heads is: HHHTT
 - Probability of this sequence occurring = $(1/2) \times (1/2) \times (1/2) \times (1-1/2) \times (1-1/2) = (1/2)^5$
WeChat: cstutorcs
 - Another way to get exactly 3 heads is: THHHT
 - Probability of this sequence occurring = $(1-1/2) \times (1/2) \times (1/2) \times (1/2) \times (1-1/2) = (1/2)^5$
 - How many such unique combinations exist?

Binomial Distribution: Example

$$\binom{5}{3}$$

ways to
arrange 3
heads in
5 trials

$${}_5C_3 = 5!/3!2! = 10$$

Outcome	Probability
THHHT	$(1/2)^3 \times (1/2)^2$
HHHTT	$(1/2)^3 \times (1/2)^2$
TTHHH	$(1/2)^3 \times (1/2)^2$
HTTHH	$(1/2)^3 \times (1/2)^2$
HHTTH	$(1/2)^3 \times (1/2)^2$
THTHH	$(1/2)^3 \times (1/2)^2$
HTHTH	$(1/2)^3 \times (1/2)^2$
HHTHT	$(1/2)^3 \times (1/2)^2$
THHTH	$(1/2)^3 \times (1/2)^2$
HTHHT	$(1/2)^3 \times (1/2)^2$
10 arrangements $\times (1/2)^3 \times (1/2)^2$	

The probability
of each unique
outcome (note:
they are all
equal)

$$P(3 \text{ heads and 2 tails}) = 10 \times (1/2)^5 = 0.3125$$

Binomial Distribution

Note the general pattern emerging → if you have only two possible outcomes (call them 1/0 or yes/no or success/failure) in n independent trials, then the probability of exactly X “successes” =

Assignment Project Exam Help

n = number of trials

<https://tutorcs.com>

$$\binom{n}{x} p^x (1-p)^{n-x}$$

WeChat: cstutorcs

X = #
successe
s out of n
trials

p =
probability of
success

$1-p$ = probability
of failure

Packet switching versus circuit switching

- ❖ Let's revisit the earlier problem
- ❖ $N = 35$ users
- ❖ $\text{Prob } (\# \text{ active users} > 10) = 1 - \text{Prob } (\# \text{ active} = 10)$
 - $\text{Prob } (\# \text{ active} = 9)$
 - <https://tutorcs.com>
 - $\text{Prob } (\# \text{ active} = 8)$
 - ..
 - $\text{Prob } (\# \text{ active} = 0)$

where $\text{Prob } (\# \text{ active} = 10) = C(35, 10) \times 0.1^{10} \times 0.9^{25}$

- ❖ $\text{Prob } (\# \text{ active users} > 10) = 0.0004$ (approx)

Packet switching versus circuit switching

is packet switching a “slam dunk winner?”

- ❖ great for bursty data
 - resource sharing
 - simpler, no call setup
- ❖ excessive congestion possible: packet delay and loss
 - protocols needed for reliable data transfer, congestion control
- ❖ Q: How to provide circuit-like behavior?
 - bandwidth guarantees needed for audio/video apps
 - still an unsolved problem

Q: human analogies of reserved resources (circuit switching) versus on-demand allocation (packet-switching)?

Quiz: Switching

In _____ resources are allocated on demand

Assignment Project Exam Help

- A. Packet switching
<https://tutorcs.com>
- B. Circuit switching
[WeChat: cstutorcs](#)
- C. Both
- D. None

Answer: A

Open a browser and type: www.zeetings.com/salil

Quiz: Switching

A message from device A to B consists of packet X and packet Y. In a circuit switched network, packet Y's path _____ packet X's path

- A. is the same
- B. is independent
- C. is always different from

<https://tutorcs.com>

WeChat: cstutorcs

Answer: A

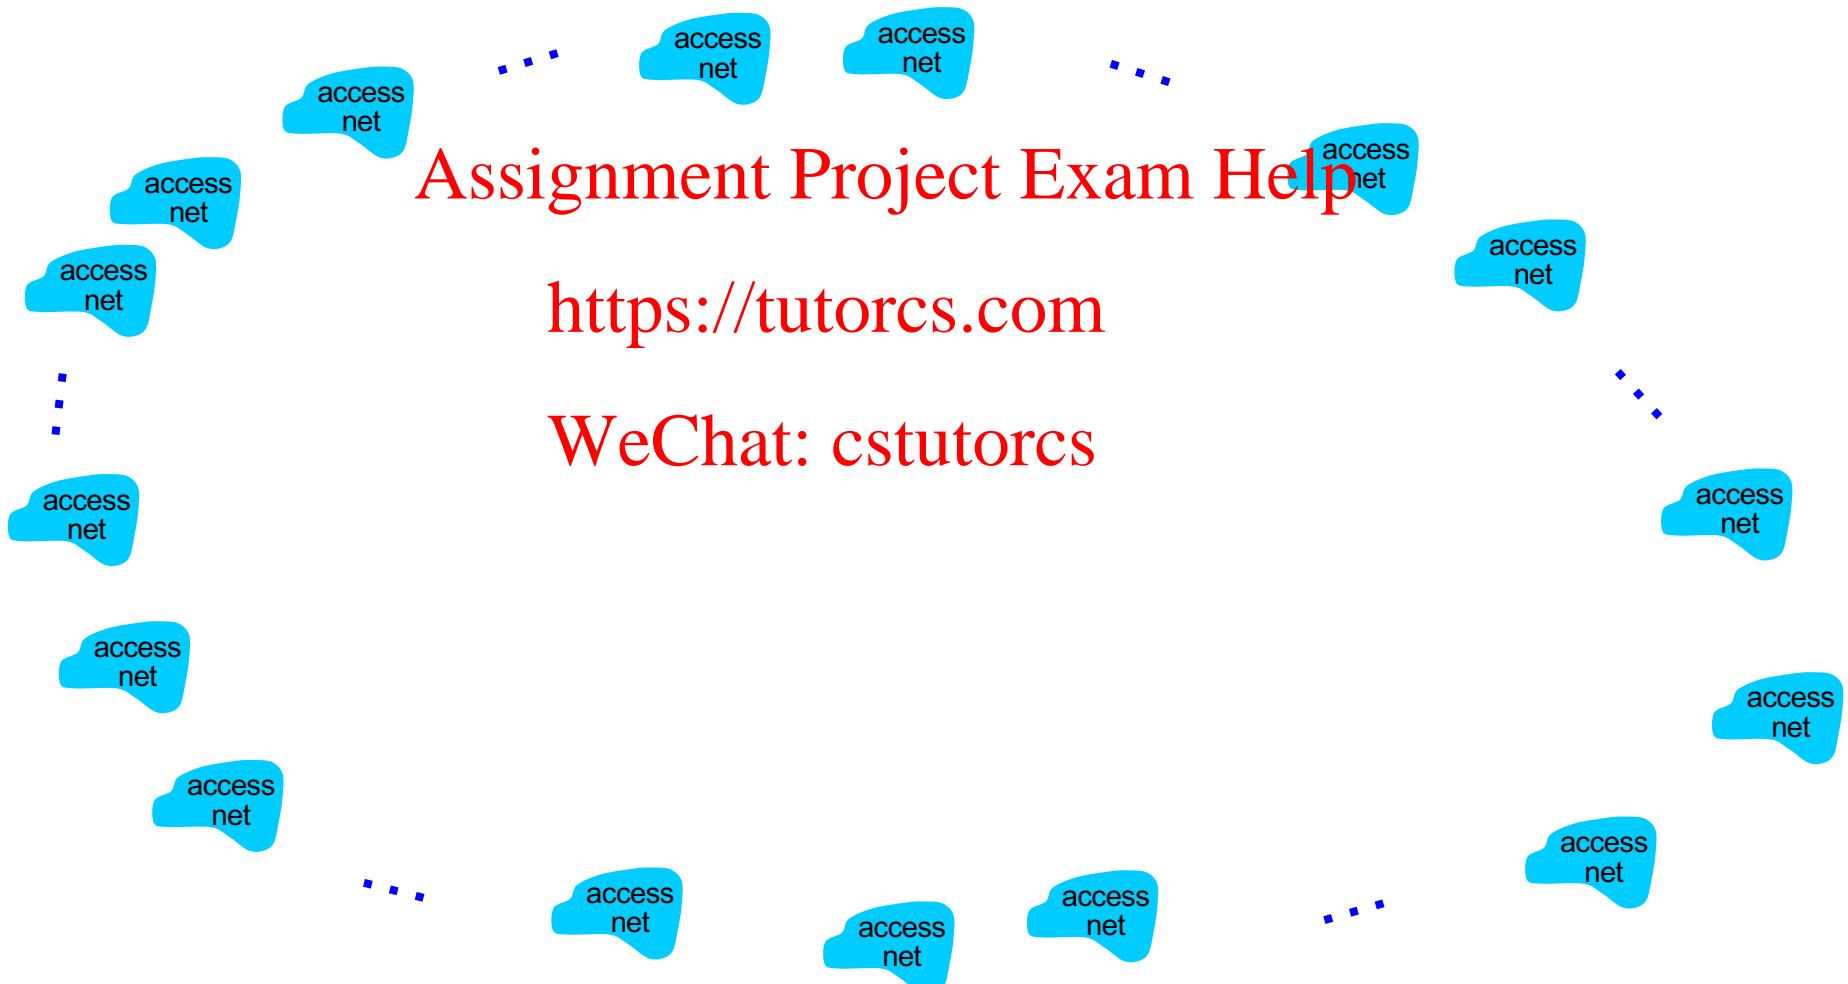

Open a browser and type: www.zeetings.com/salil

Internet structure: network of networks

- ❖ End systems connect to Internet via **access ISPs** (Internet Service Providers)
 - Residential, company and university ISPs
- ❖ Access ISPs in turn must be interconnected.
 - ❖ So that any two hosts can send packets to each other
- ❖ Resulting network of networks is very complex
 - ❖ Evolution was driven by **economics** and **national policies**
- ❖ Let's take a stepwise approach to describe current Internet structure

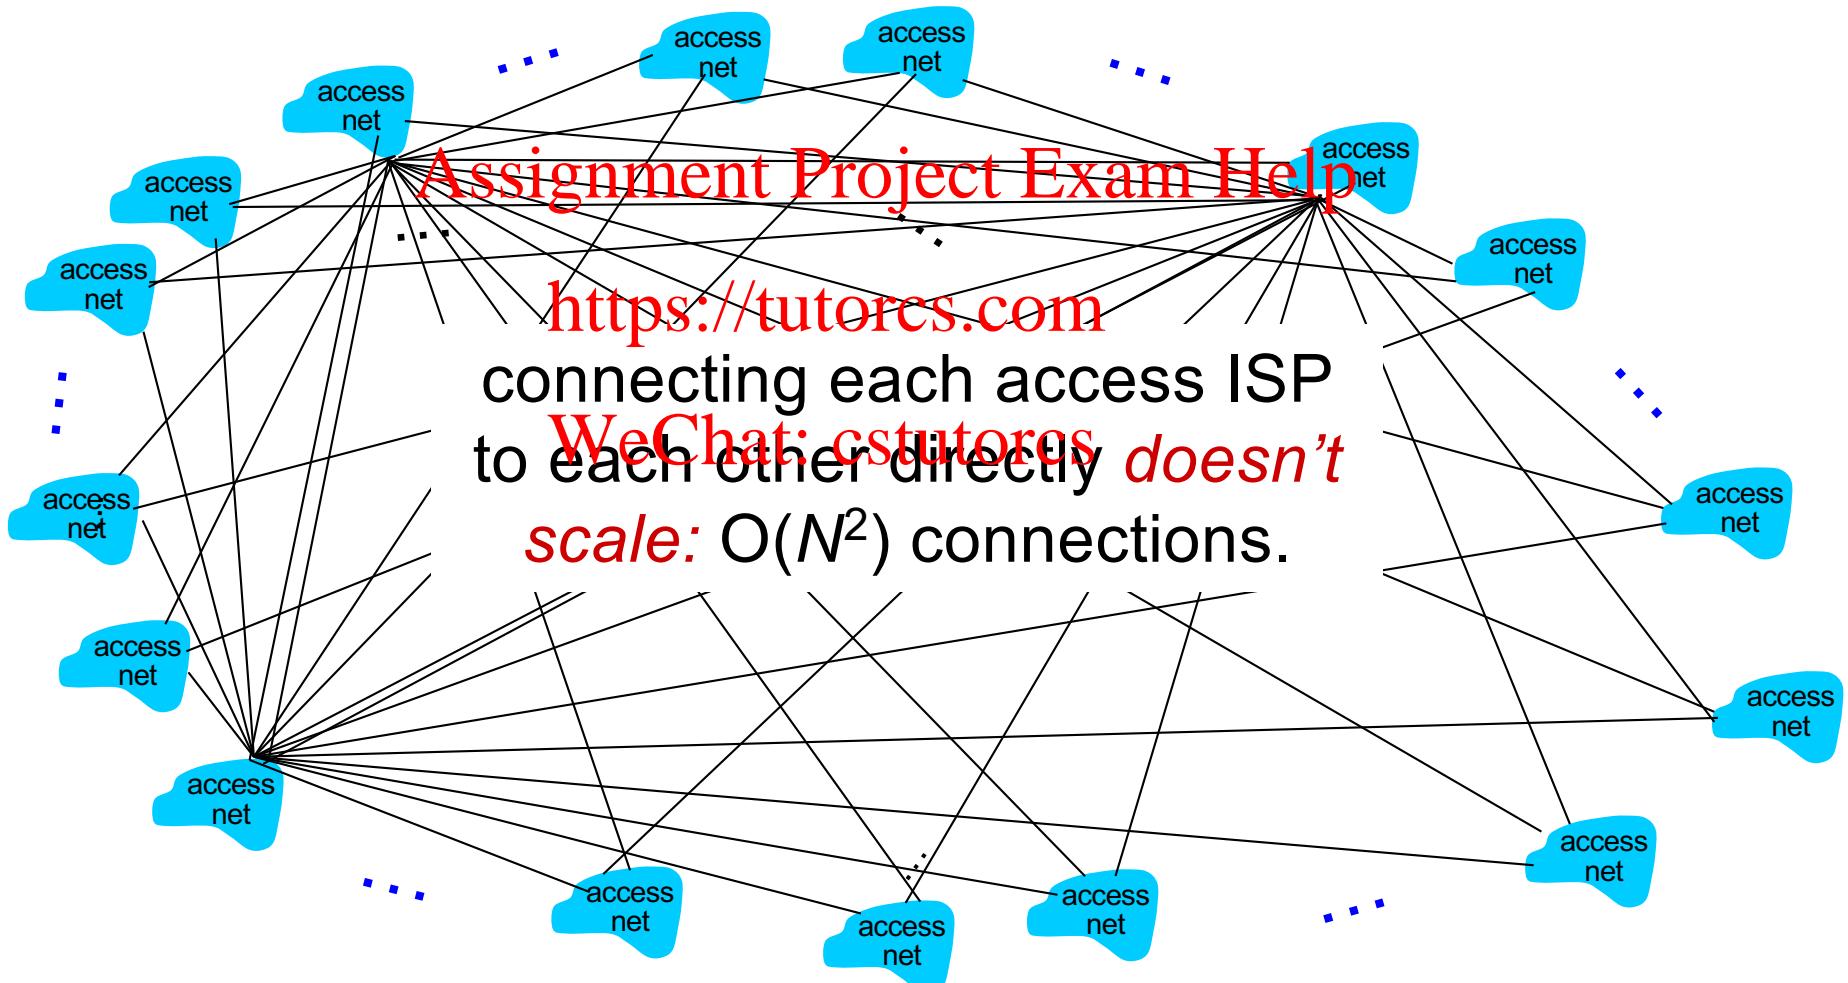

Internet structure: network of networks

Question: given *millions* of access ISPs, how to connect them together?

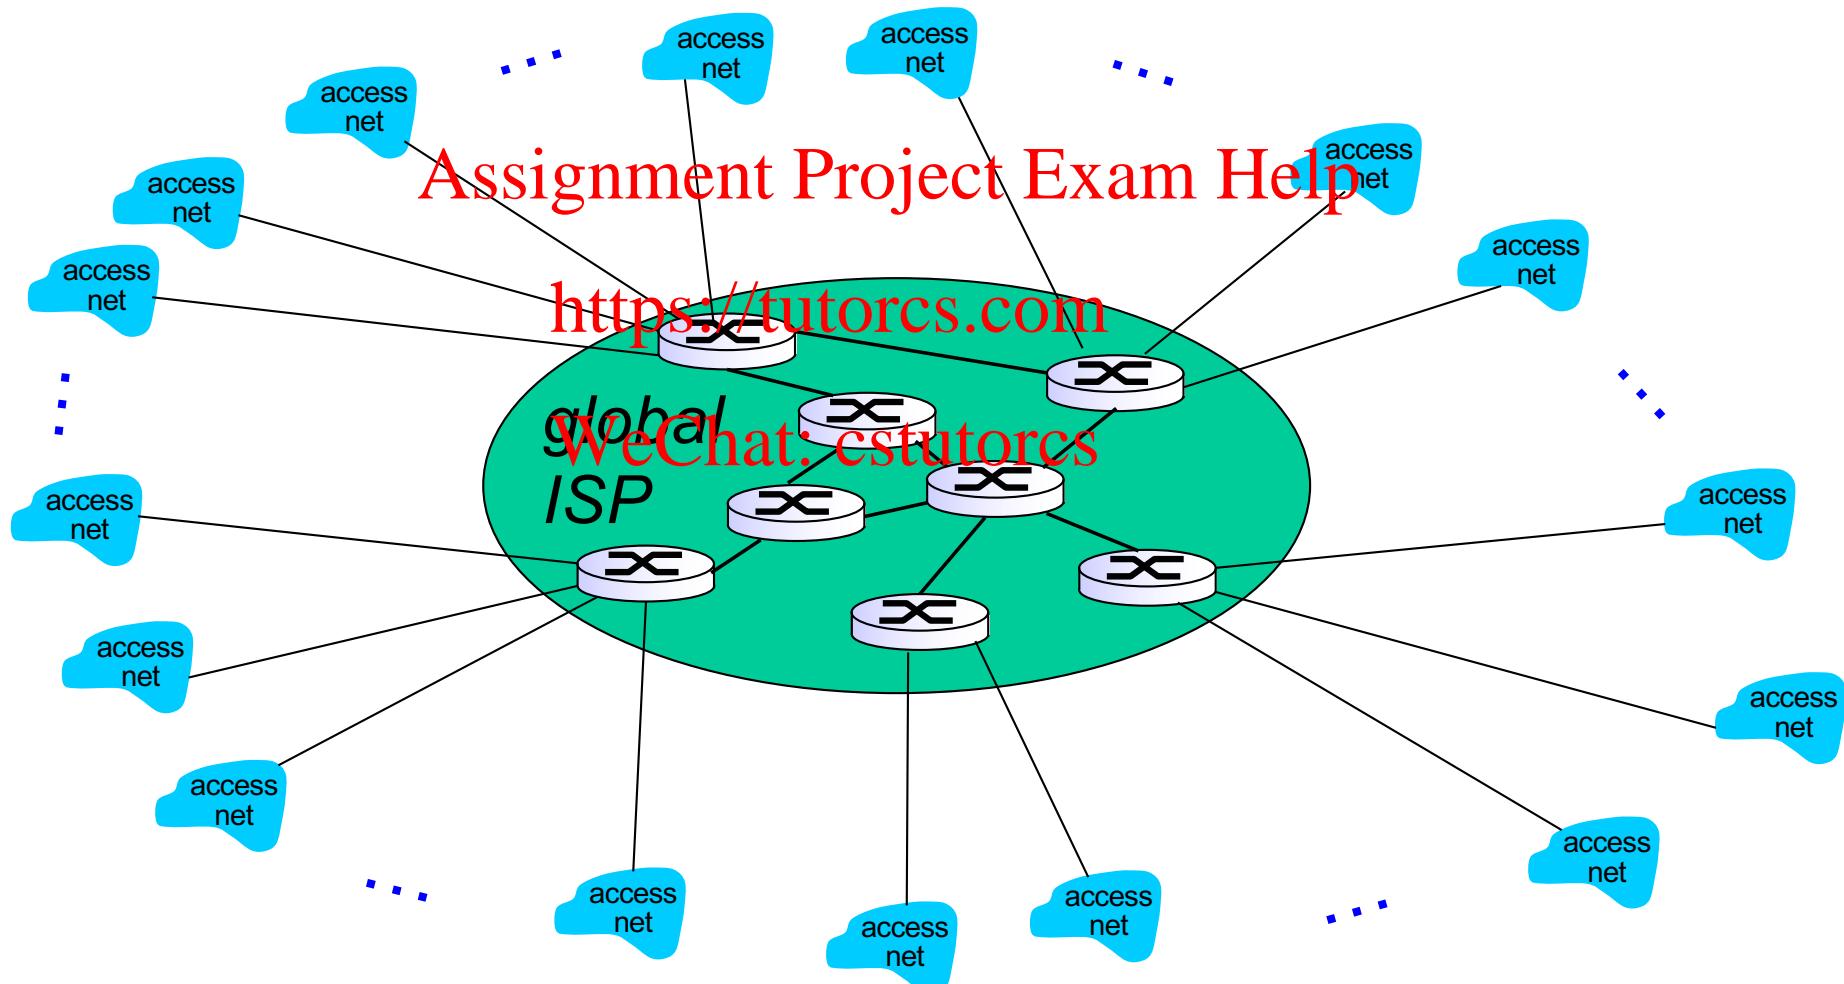

Internet structure: network of networks

Option: connect each access ISP to every other access ISP?

Internet structure: network of networks

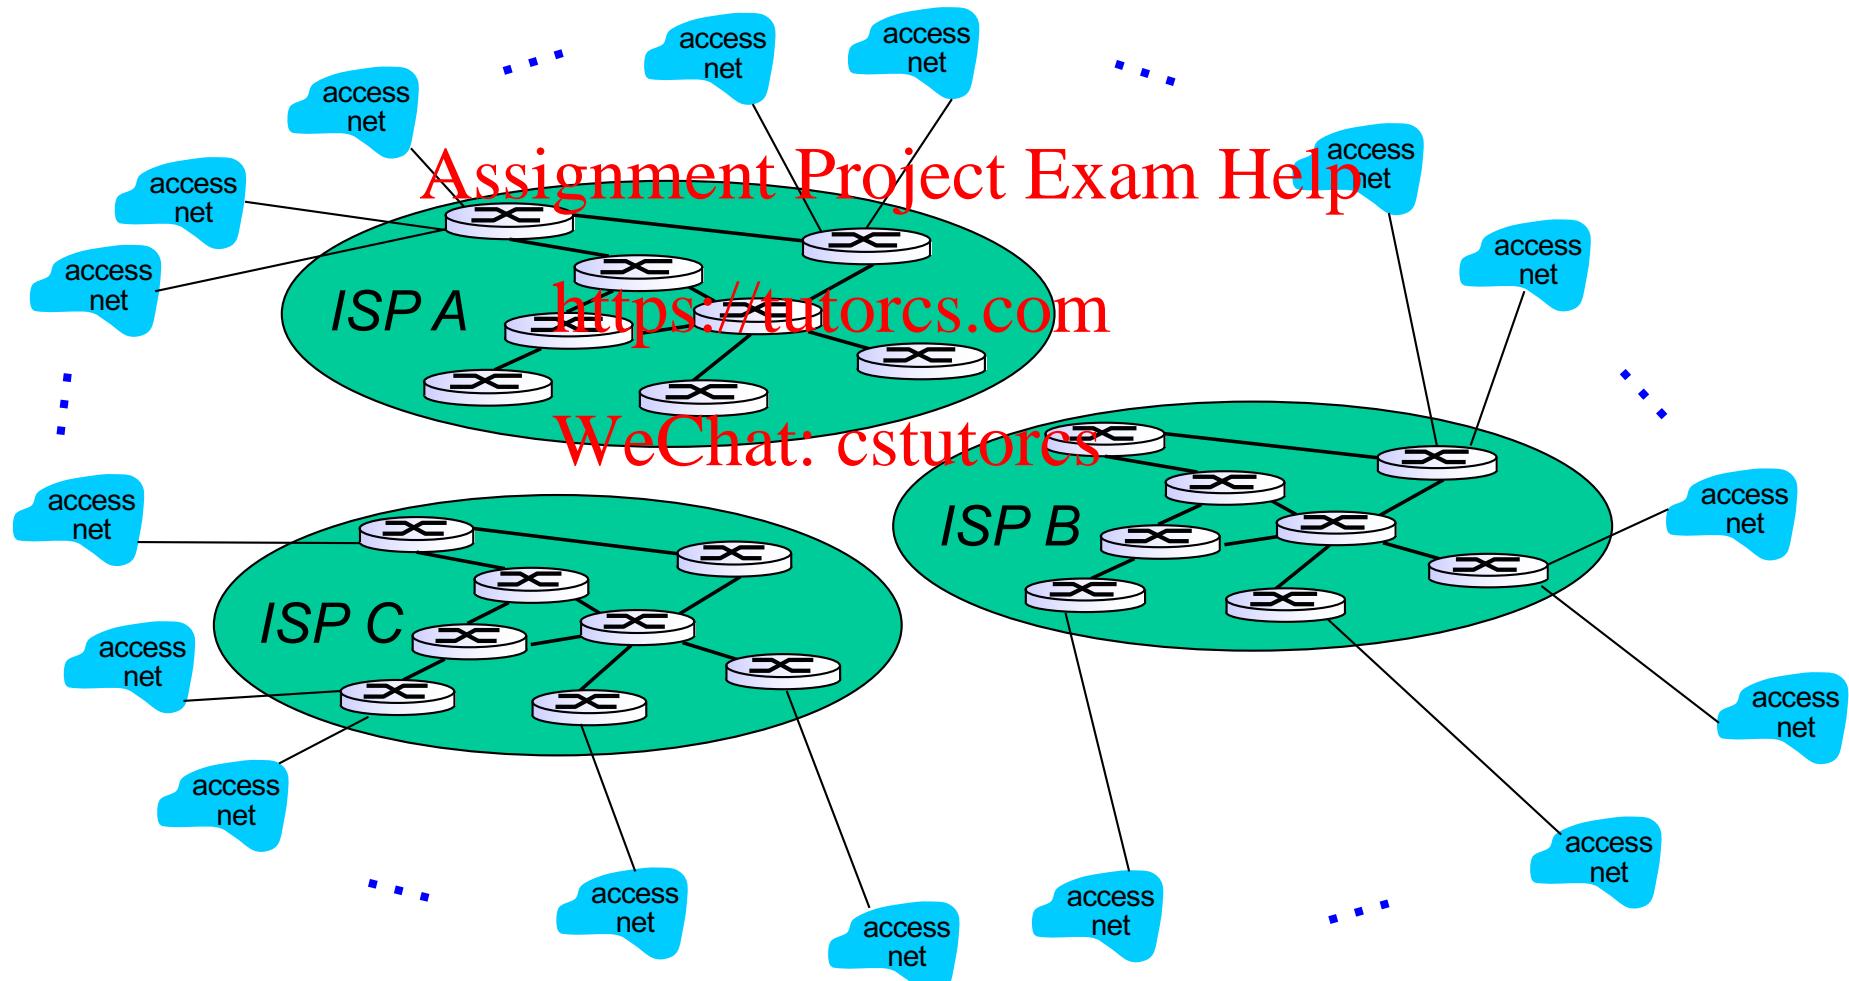

Option: connect each access ISP to a global transit ISP? **Customer and provider ISPs have economic agreement.**

Internet structure: network of networks

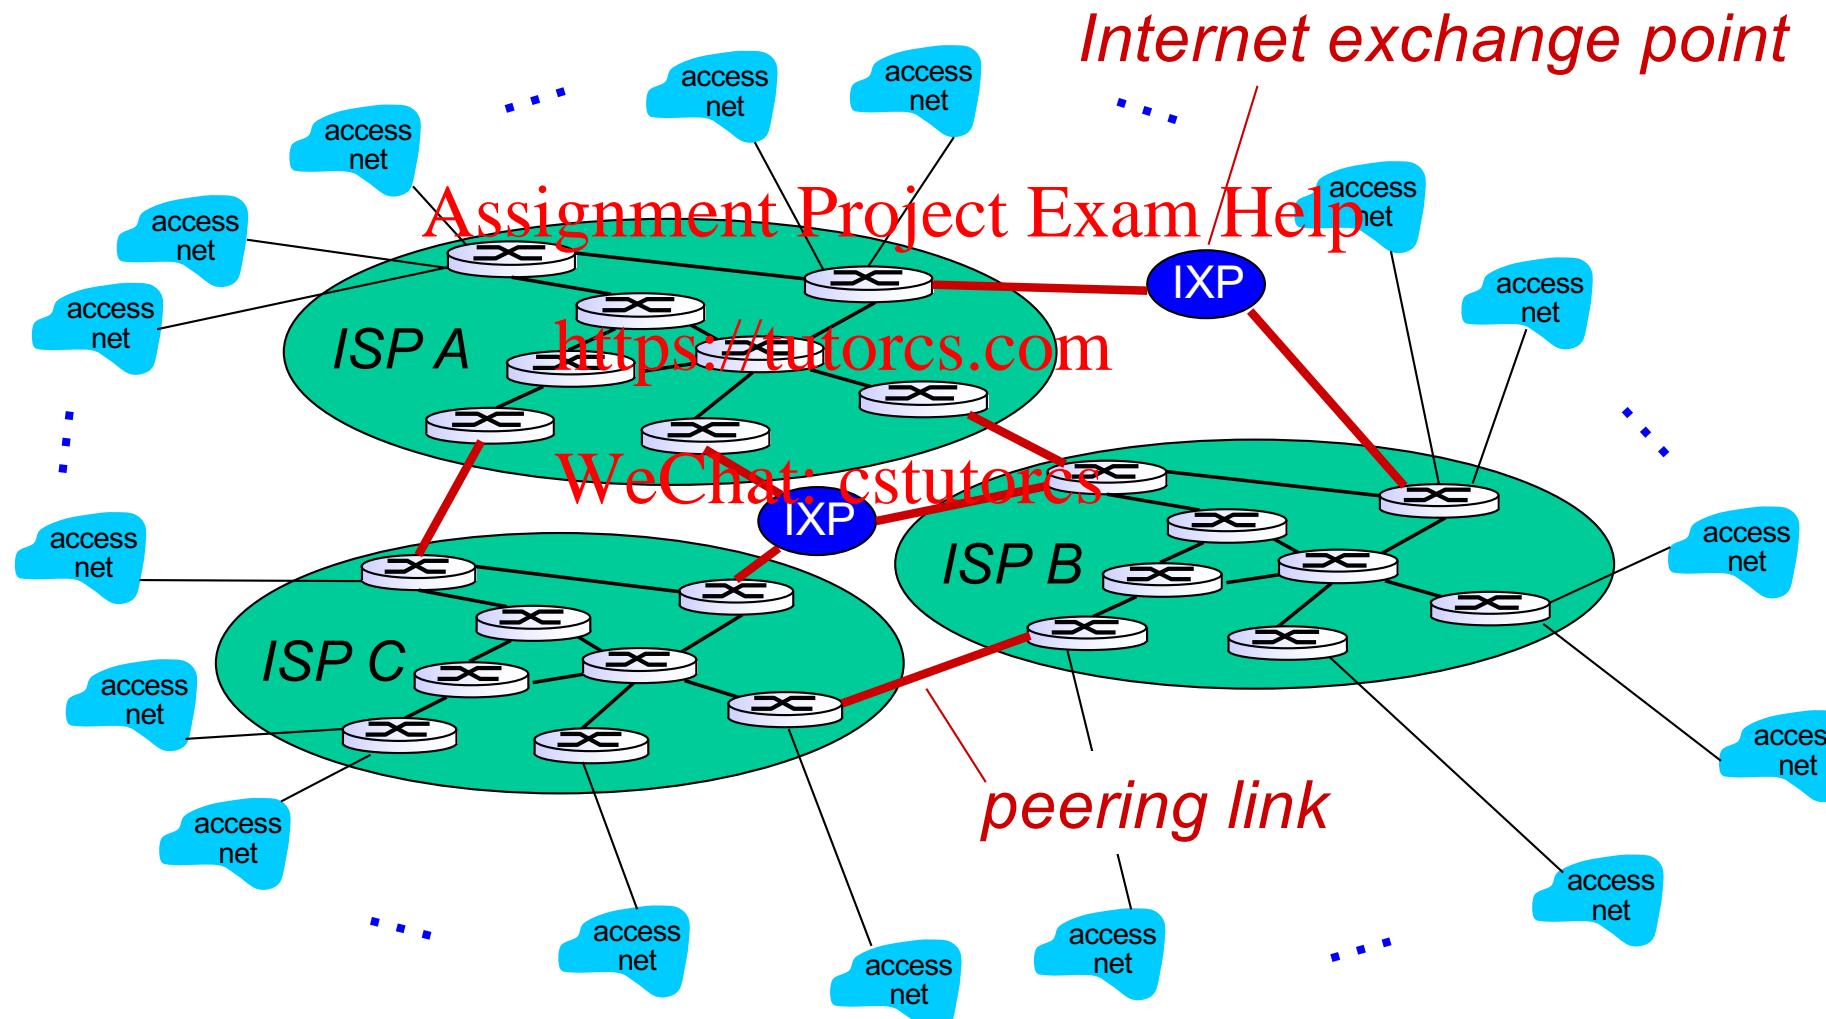

But if one global ISP is viable business, there will be competitors

....

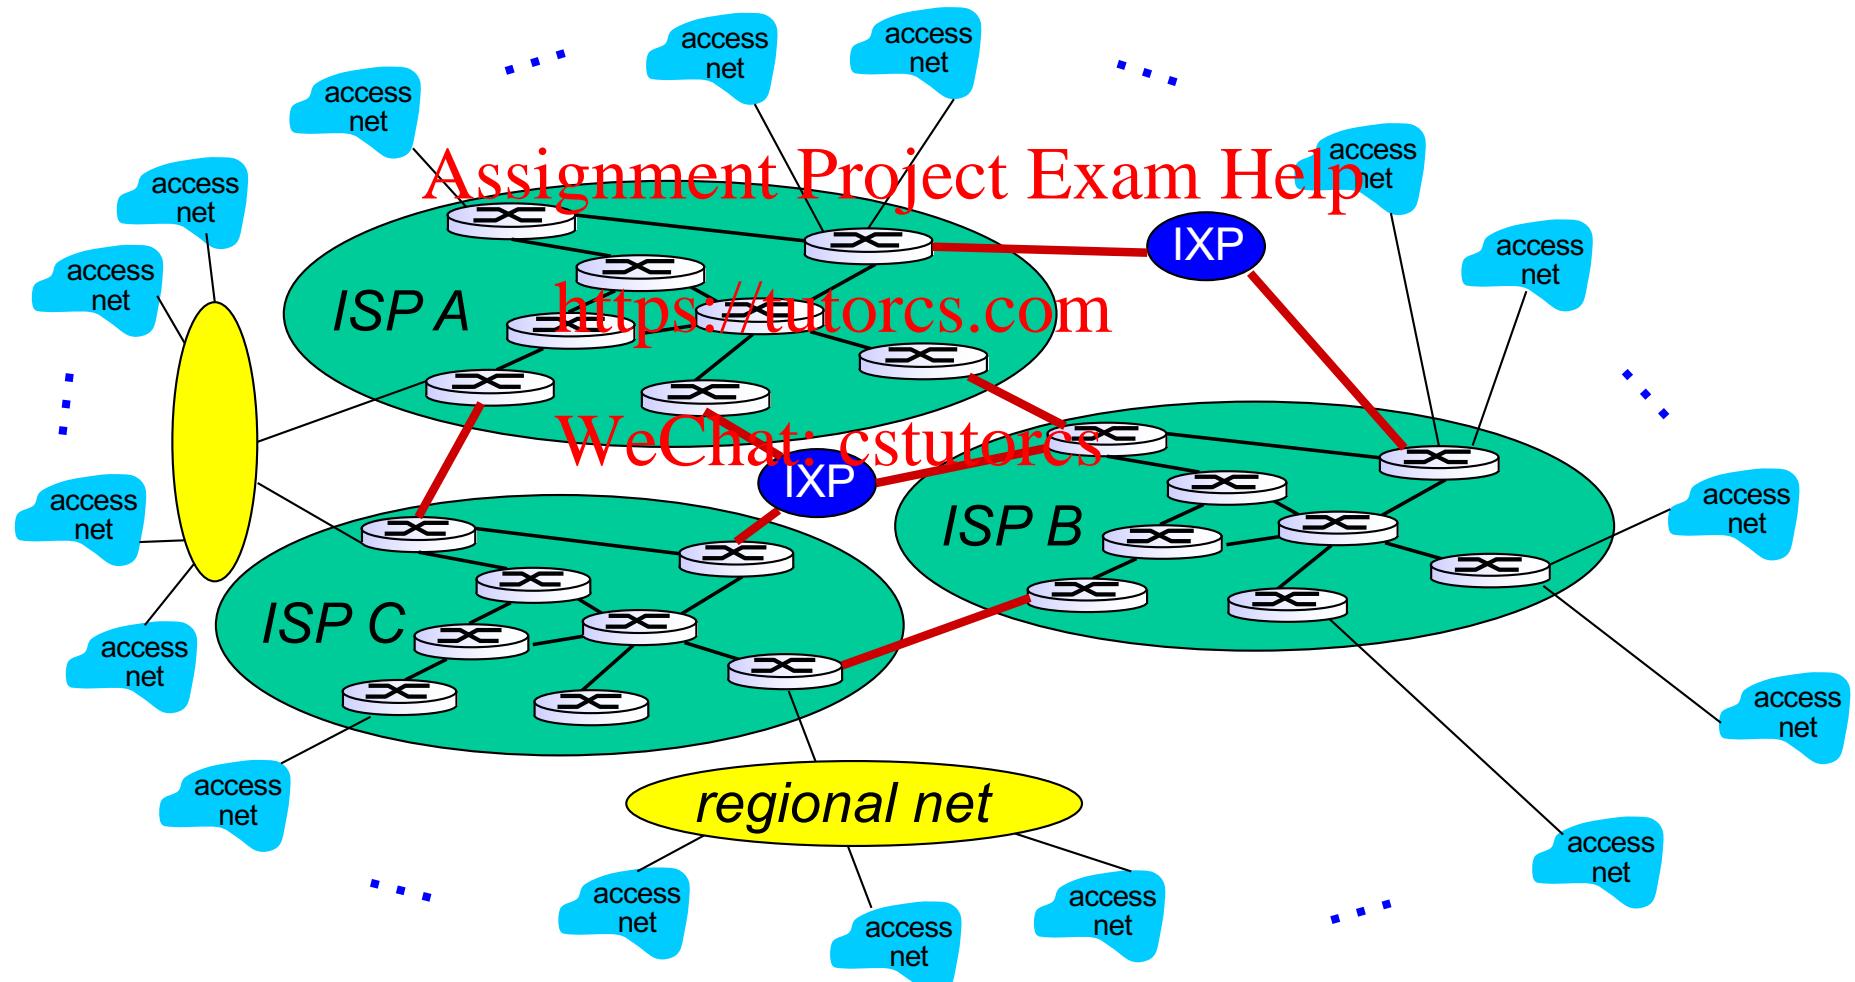

Internet structure: network of networks

But if one global ISP is viable business, there will be competitors
.... which must be interconnected

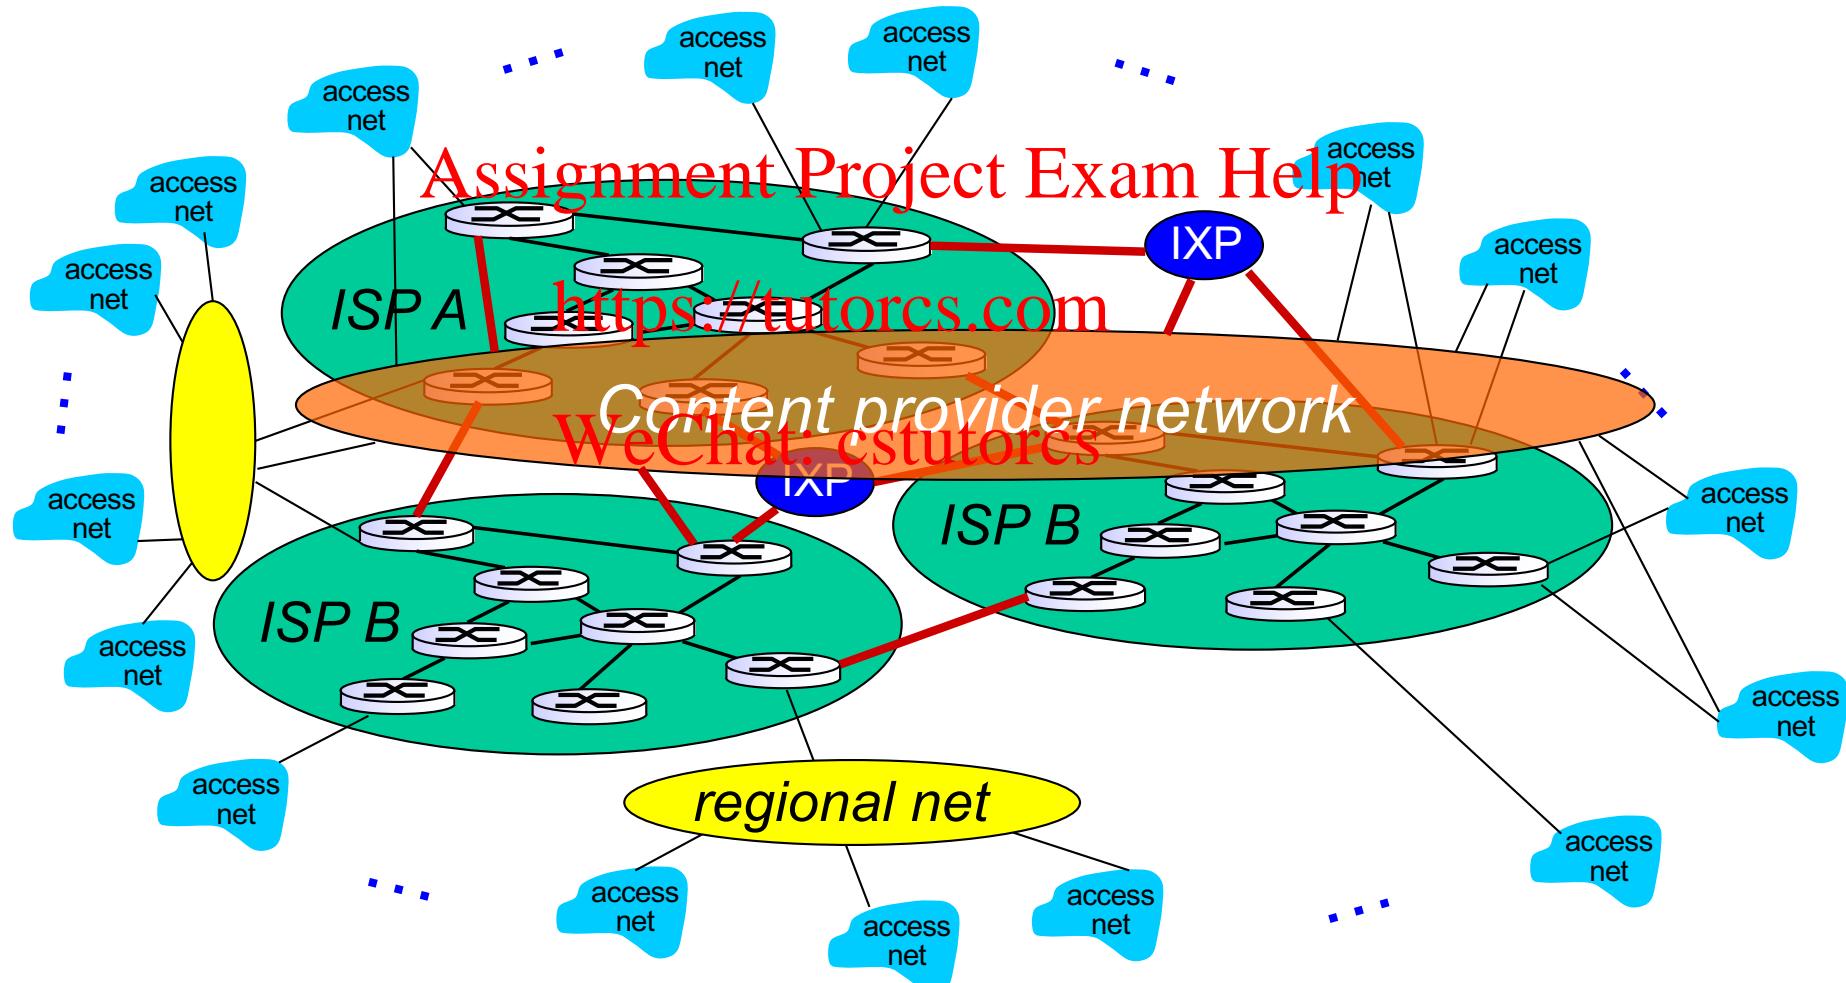

Internet structure: network of networks

... and regional networks may arise to connect access nets to ISPS

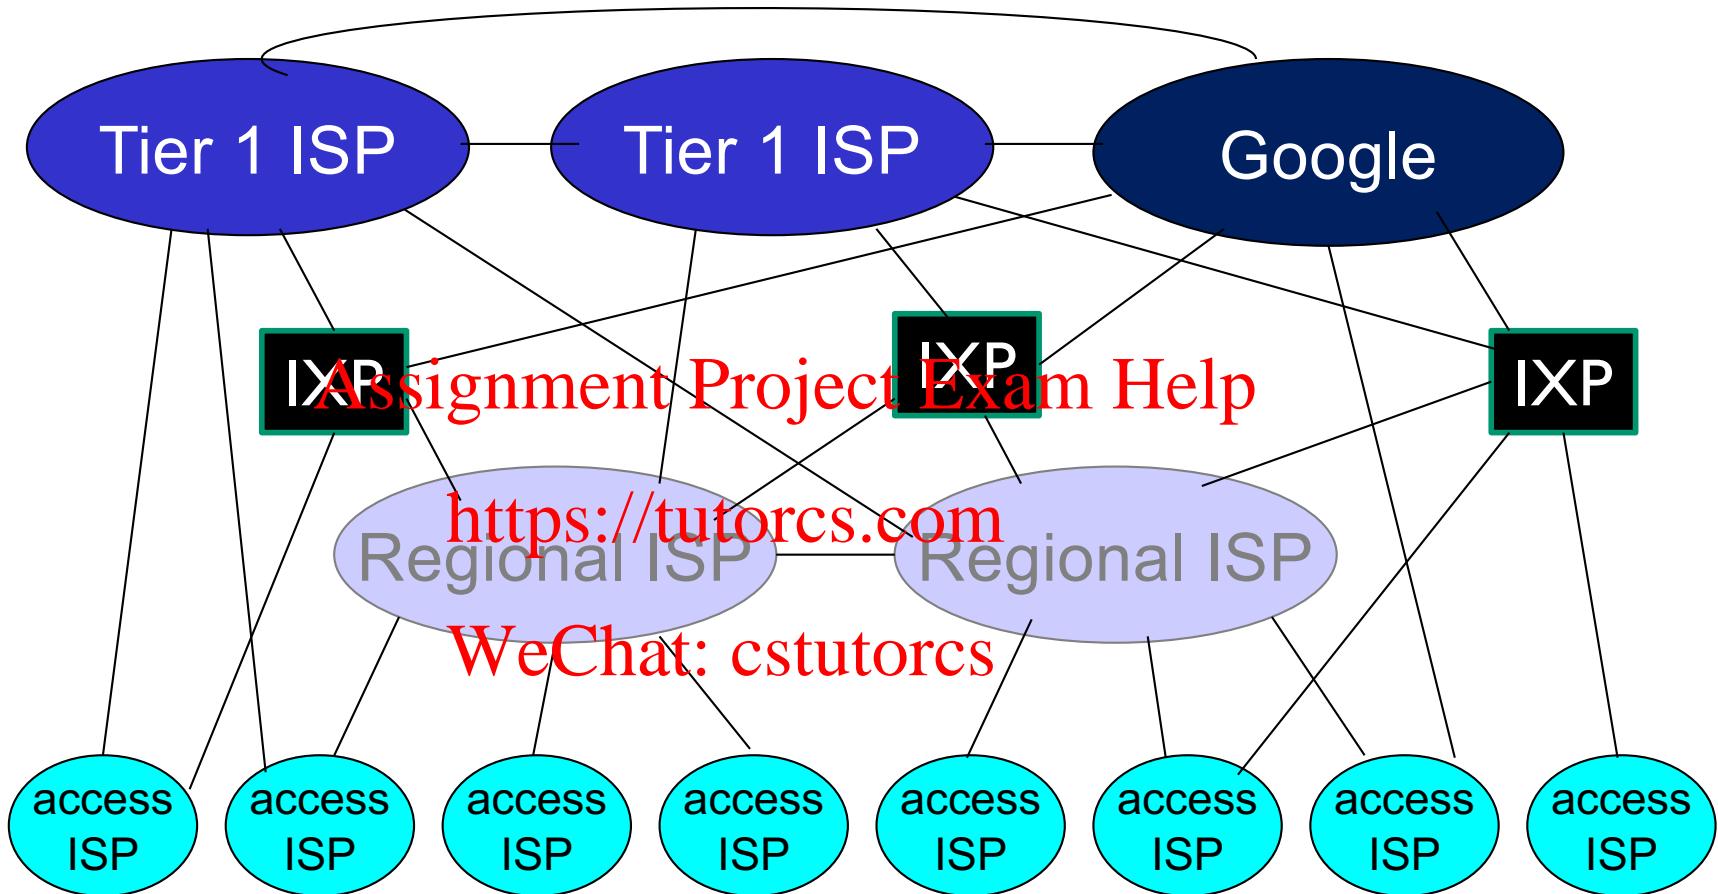

Internet structure: network of networks

... and content provider networks (e.g., Google, Microsoft, Akamai) may run their own network, to bring services, content close to end users

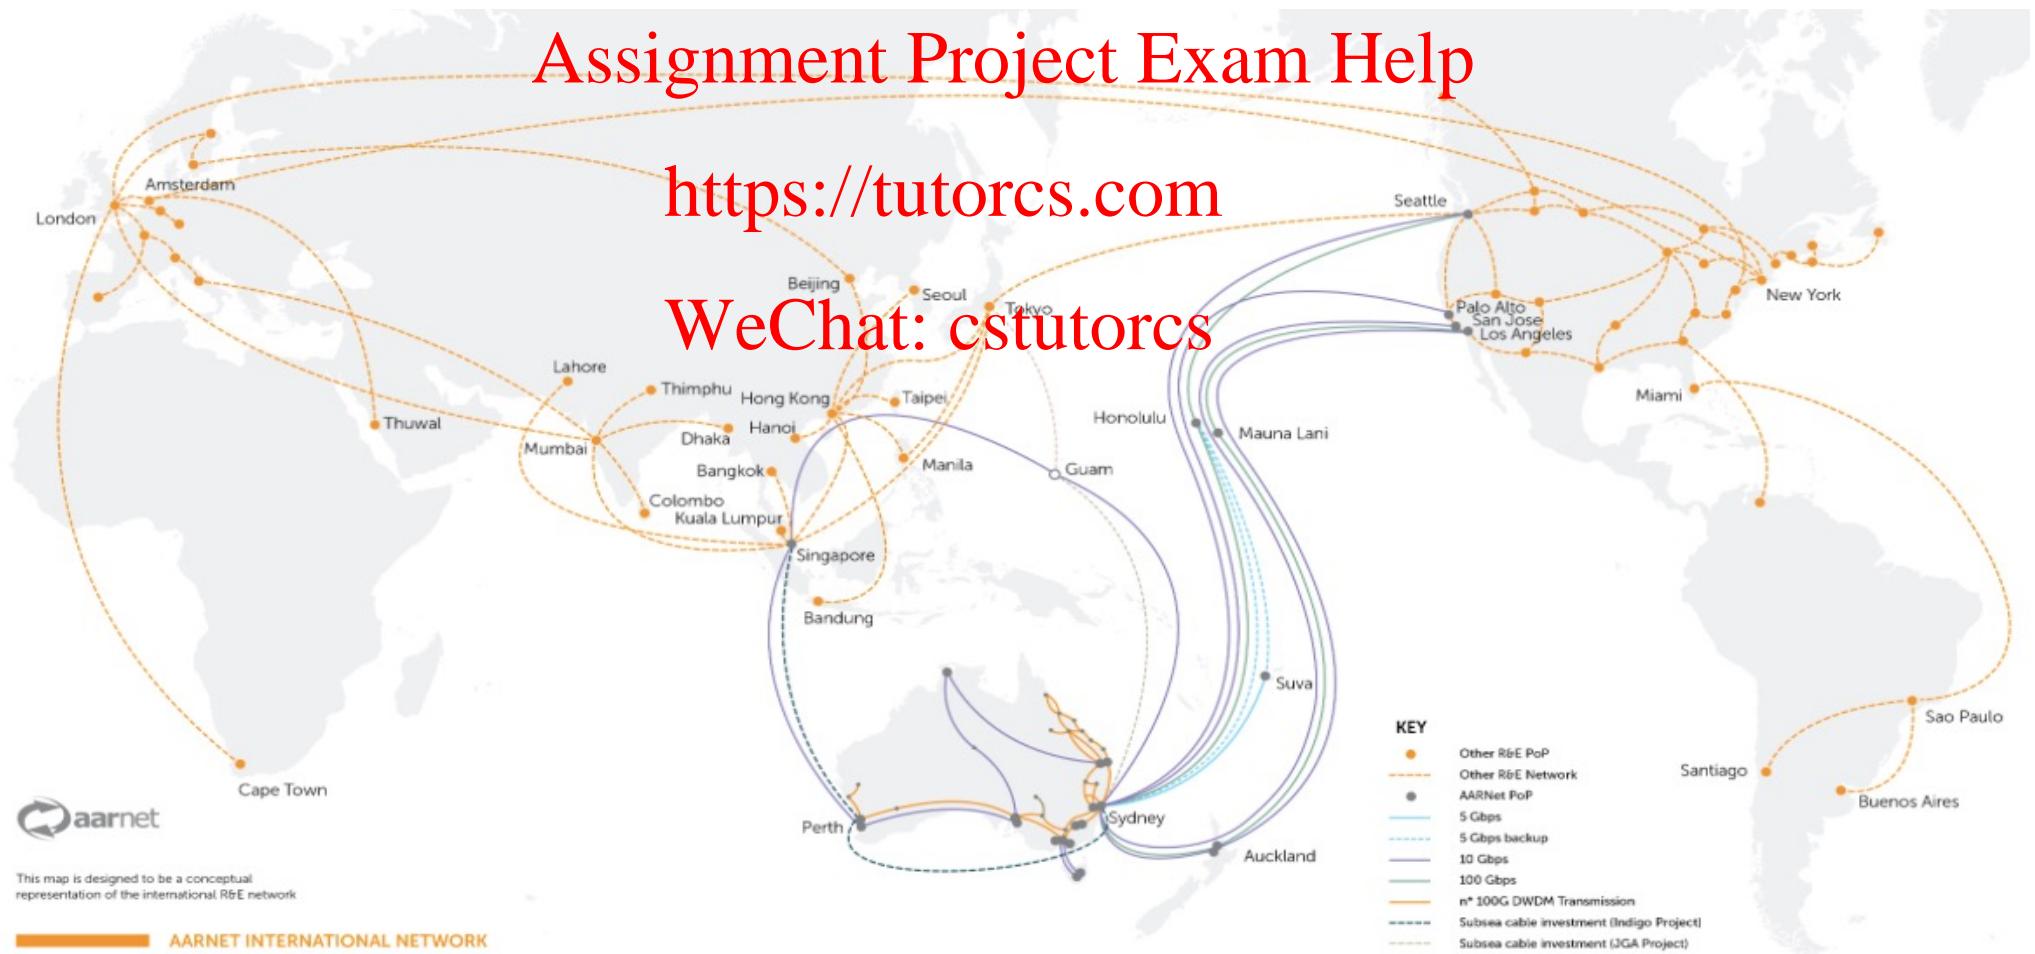

Internet structure: network of networks

- ❖ at center: small # of well-connected large networks
 - “tier-1” commercial ISPs (e.g., Level 3, Sprint, AT&T, NTT, Orange, Deutsche Telekom), national & international coverage
 - content provider network (e.g., Google): private network that connects its data centers to Internet, often bypassing tier-1, regional ISPs

AARNET: Australia's Academic and Research Network

- ❖ <https://www.aarnet.edu.au/>
- ❖ <https://www.submarinecablemap.com>

I. Introduction: roadmap

I.1 what *is* the Internet?

I.2 network edge

- end systems, access networks, links

Assignment Project Exam Help

I.3 network core

<https://tutorcs.com>

- packet switching, circuit switching, network structure

I.4 delay, loss, throughput in networks

I.5 protocol layers, service models

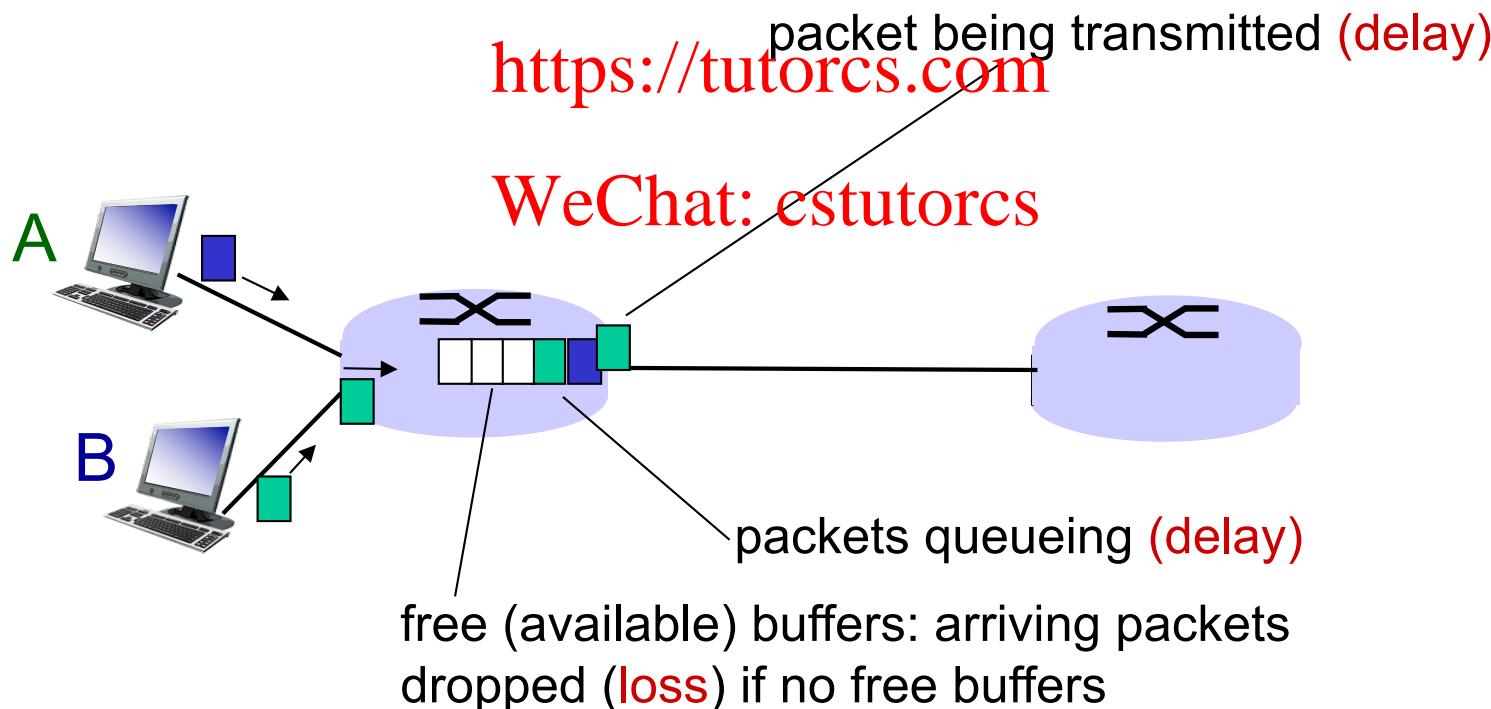

I.6 networks under attack: security

I.7 history

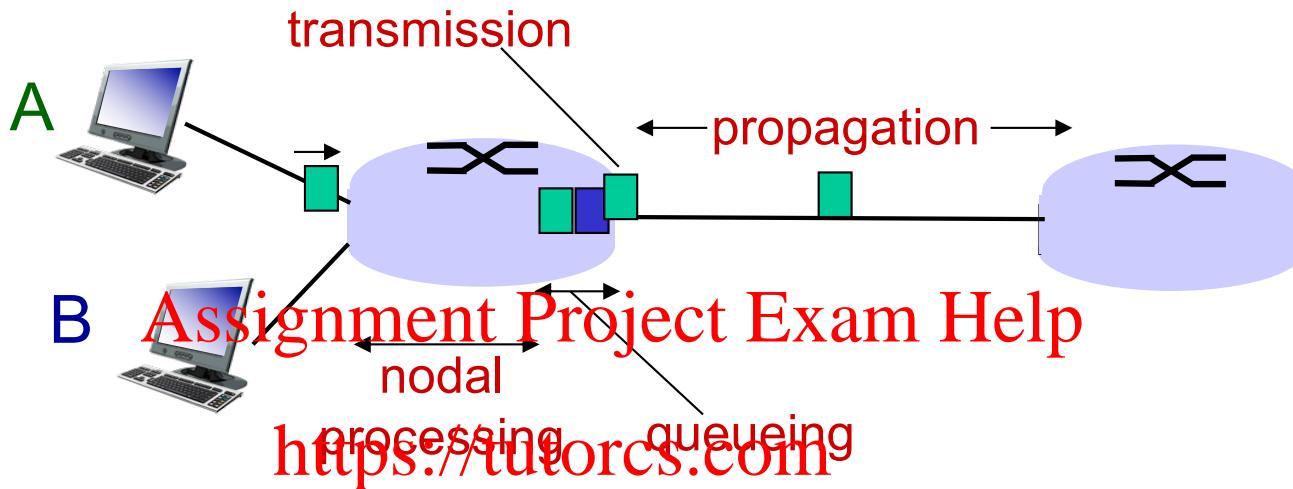

How do loss and delay occur?

Packets queue in router buffers

- Packet arrival rate to link (temporarily) exceeds output link capacity
- Packets queue, wait for turn

Four sources of packet delay

$$d_{\text{nodal}} = d_{\text{proc}} + d_{\text{queue}} + d_{\text{trans}} + d_{\text{prop}}$$

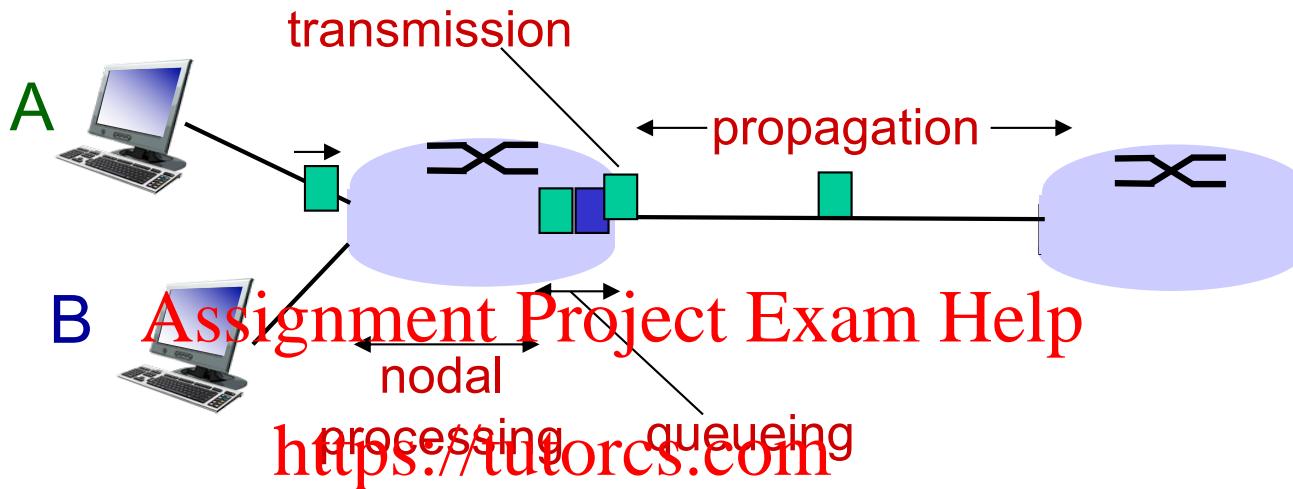

d_{proc} : nodal processing

- check bit errors
- determine output link
- typically < msec

d_{queue} : queueing delay

- time waiting at output link for transmission
- depends on congestion level of router

Four sources of packet delay

$$d_{\text{nodal}} = d_{\text{proc}} + d_{\text{queue}} + d_{\text{trans}} + d_{\text{prop}}$$

d_{trans} : transmission delay:

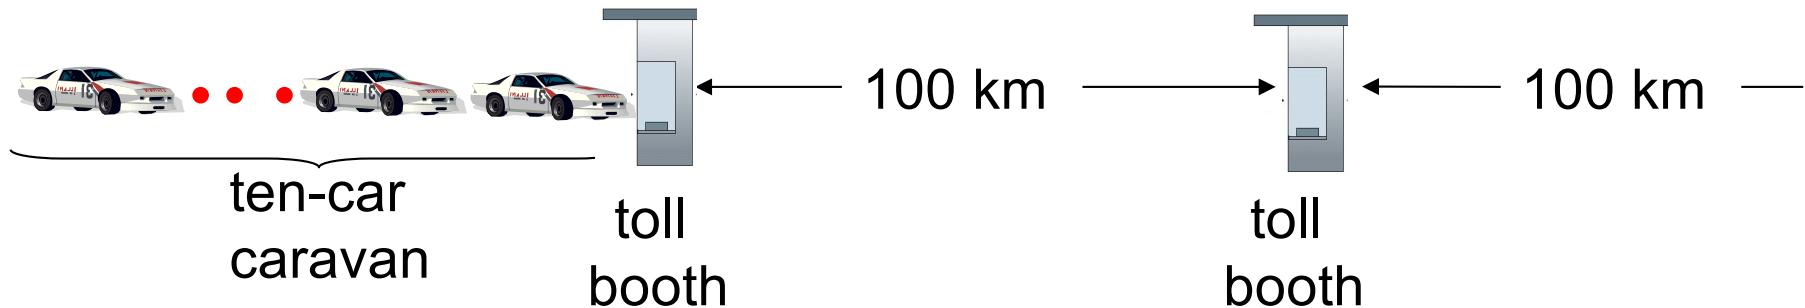

- L : packet length (bits)
- R : link bandwidth (bps)
- $d_{\text{trans}} = L/R$

d_{trans} and d_{prop}
very different

d_{prop} : propagation delay:

- d : length of physical link
- s : propagation speed in medium ($\sim 2 \times 10^8$ m/sec)
- $d_{\text{prop}} = d/s$

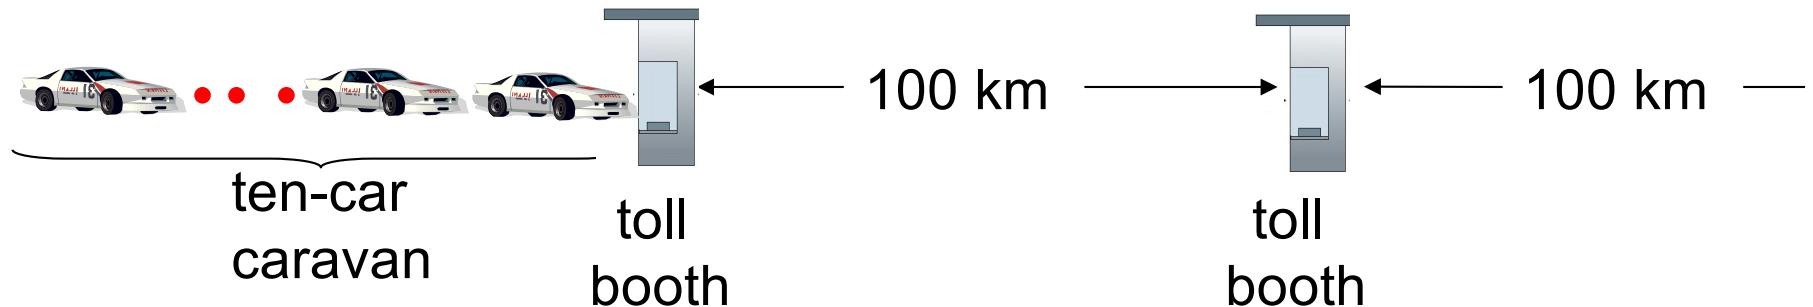

Caravan analogy

Assignment Project Exam Help

- Car ~bit; Caravan ~ packet • time to “push” entire caravan through toll booth onto highway = $12*10 = 120$ sec
- Cars “propagate” at 100 km/hr <https://tutorcs.com> WeChat: cstutorcs
- Toll booth takes 12 sec to service car (bit transmission time)
- Q: How long until caravan is lined up before 2nd toll booth?
 - time for last car to propagate from 1st to 2nd toll booth:
 $100\text{km}/(100\text{km/hr}) = 1\text{ hr}$
 - A: 62 minutes

Caravan analogy (more)

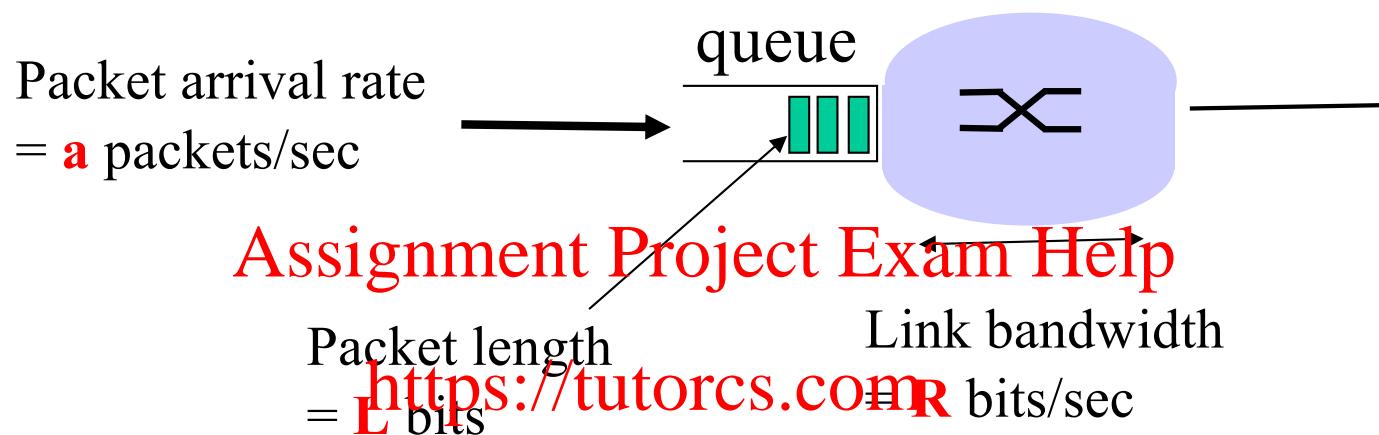

Assignment Project Exam Help

- Suppose cars now “propagate” at 1000 km/hr
- And suppose toll booth now takes one min to service a car
- Q: Will cars arrive to 2nd booth before all cars serviced at first booth?
 - A: Yes! after 7 min, 1st car arrives at second booth; three cars still at 1st booth.

Interactive Java Applet – Propagation vs transmission delay
<https://www2.tkn.tu-berlin.de/teaching/rn/animations/propagation/>

Queueing delay (more insight)

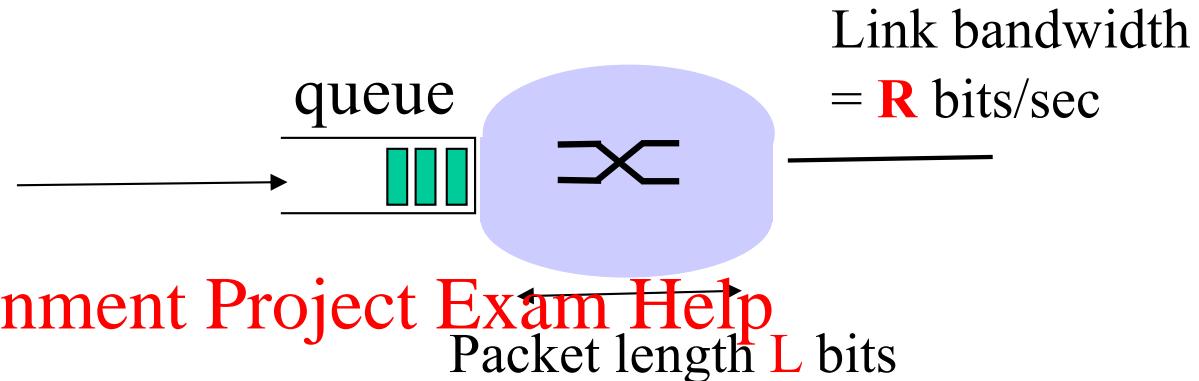

- ❖ Every second: aL bits arrive to queue
- ❖ Every second: R bits leave the router
- ❖ Question: what happens if $aL > R$?
- ❖ Answer: queue will fill up, and packets will get dropped!!

aL/R is called traffic intensity

Queueing delay: illustration

1 packet arrives
every L/R seconds

Assignment Project Exam Help

<https://tutorcs.com>

Arrival rate: $a = 1/(L/R) = R/L$ (packet/second)

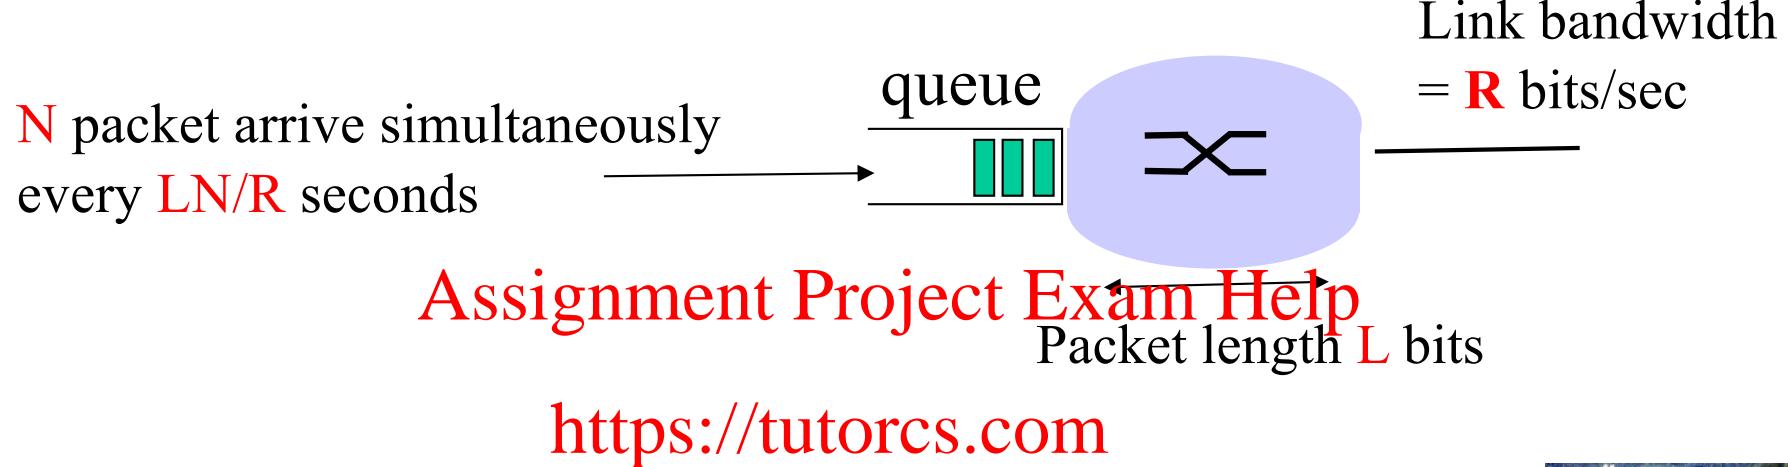

WeChat: estutorcs

Traffic intensity = $aL/R = (R/L)(L/R) = 1$

Average queueing delay = 0
(queue is initially empty)

Queueing delay: illustration

Arrival rate: $a = N/(LN/R) = R/L$ packet/second

Traffic intensity = $aL/R = (R/L)(L/R) = 1$

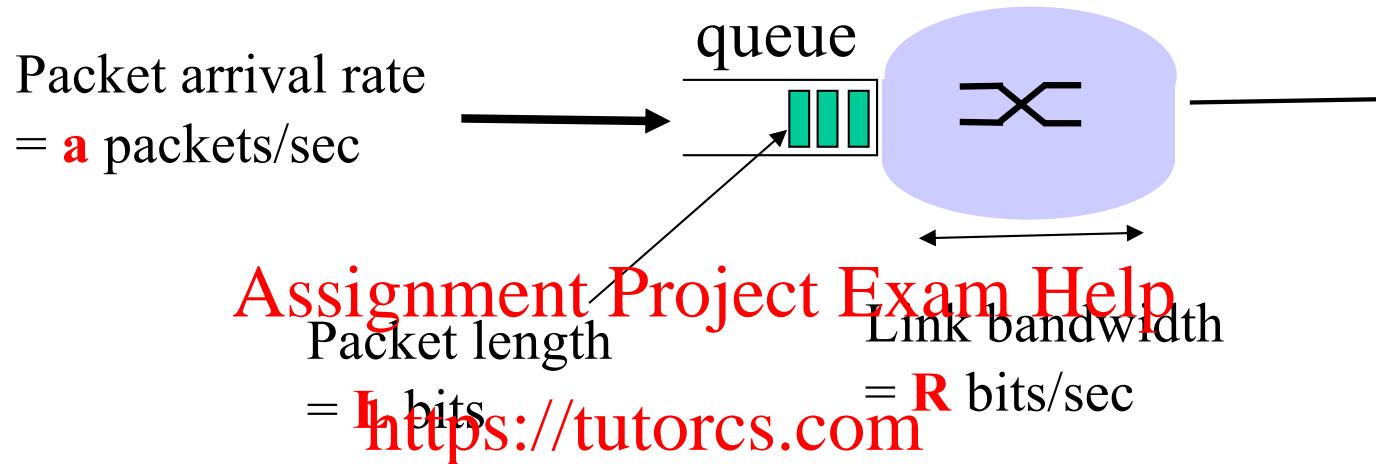

Average queueing delay (queue is empty at time 0) ?

$$\{0 + L/R + 2L/R + \dots + (N-1)L/R\}/N = L/(RN)\{1+2+\dots+(N-1)\} = L(N-1)/(2R)$$

Note: traffic intensity is same as previous scenario, but queueing delay is different

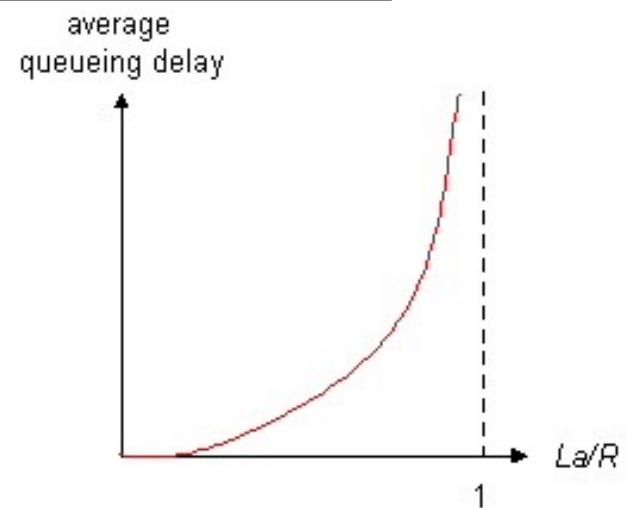

Queueing delay: behaviour

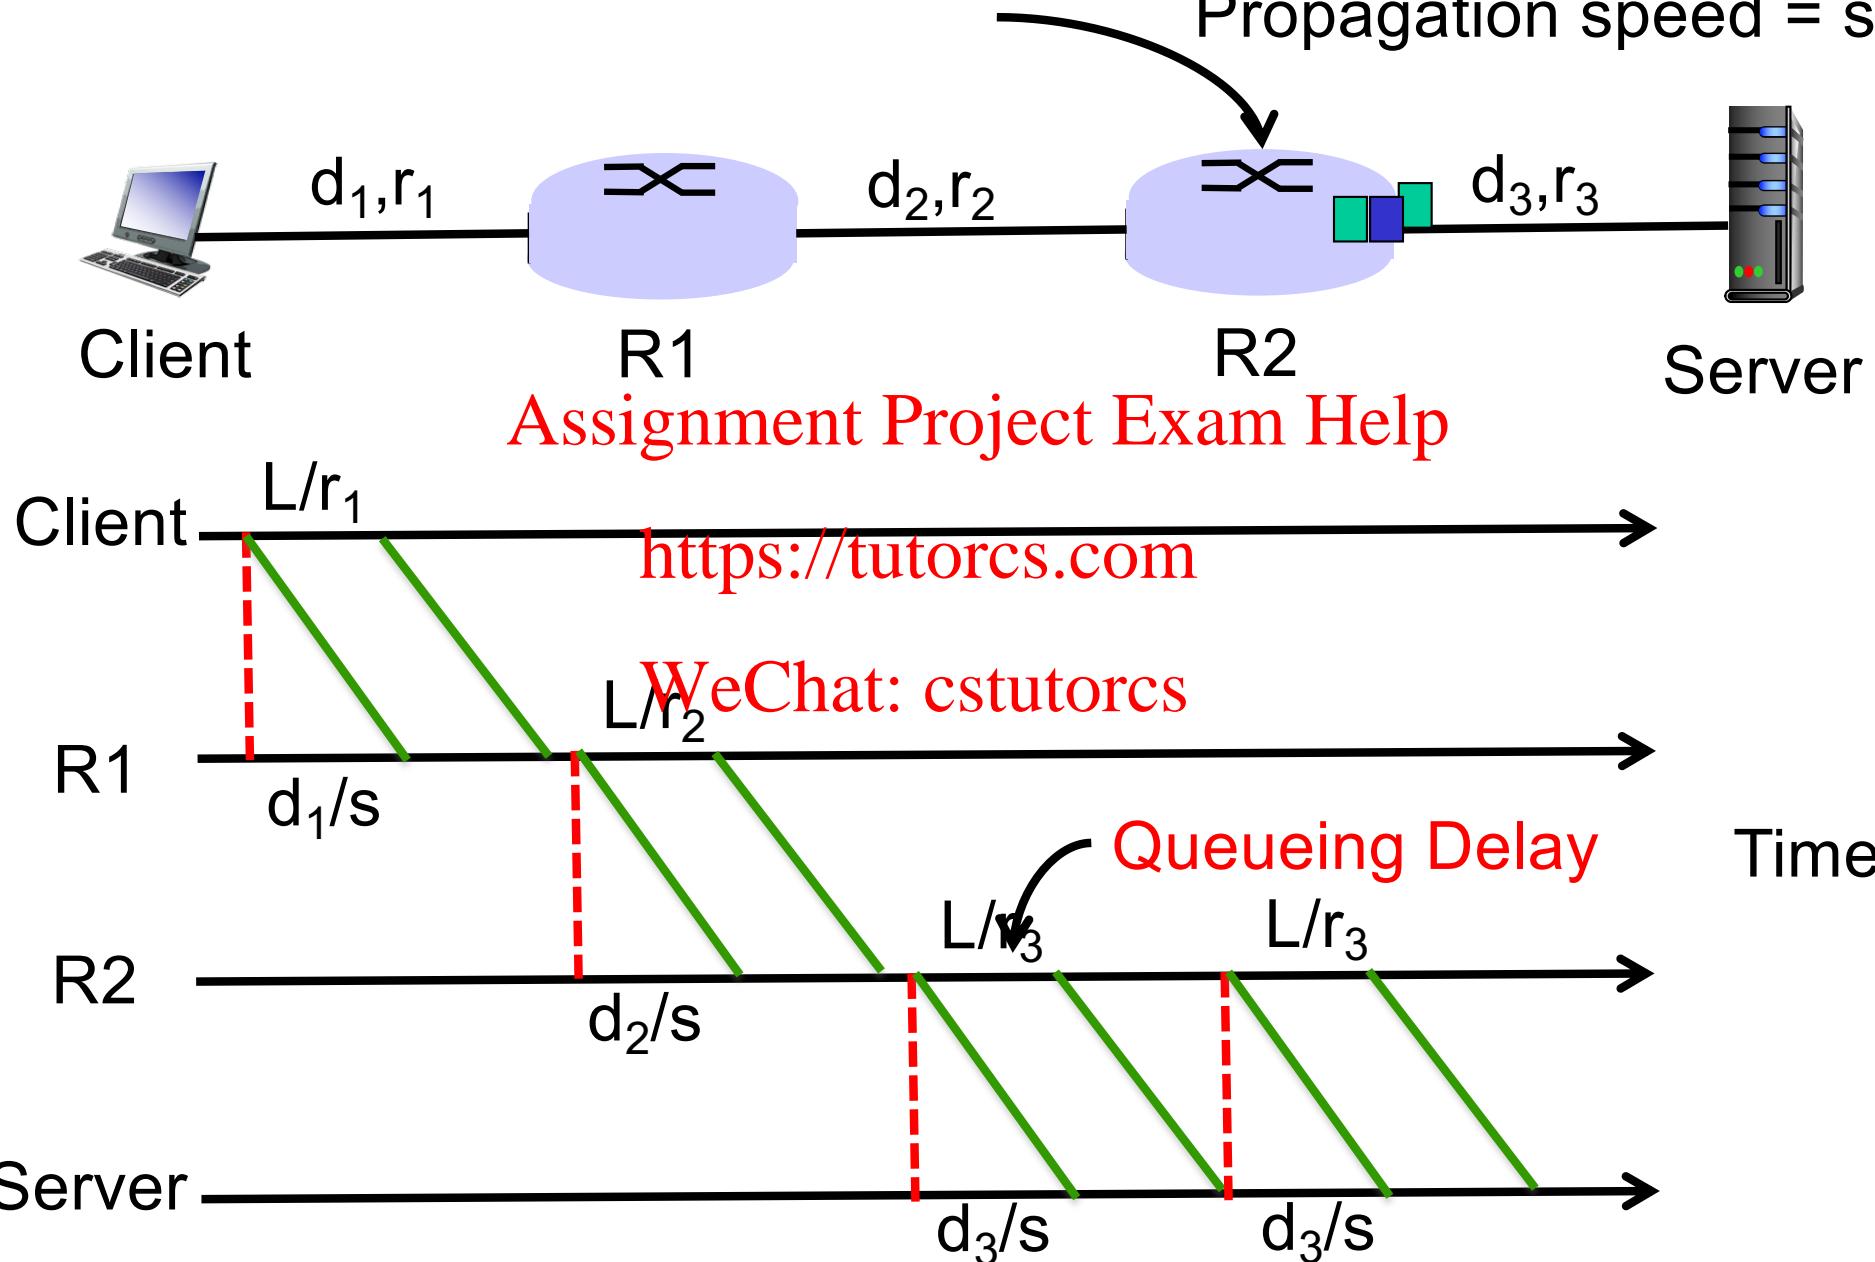

Interactive Java Applet:

<http://computerscience.unicam.it/marcantonio/reti/applet/QueueingAndLossInteractive/1.html>

- $La/R \sim 0$: avg. queueing delay small
- $La/R \rightarrow 1$: delays become large
- $La/R > 1$: more “work” than can be serviced, average delay infinite!
(this is when a is random!)

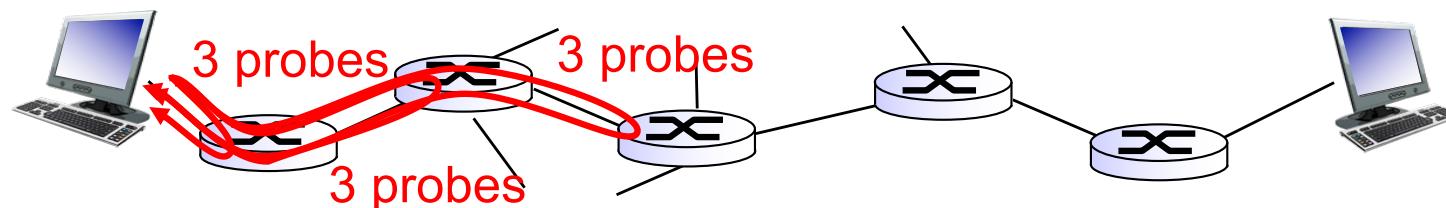

End to End Delay

In the picture, $r_1 = r_2 = r_3$, you may wish to consider what happens when this is not the case⁹⁶

“Real” Internet delays and routes

- ❖ what do “real” Internet delay & loss look like?
- ❖ Traceroute: provides delay measurement from source to router along end-end Internet path towards destination. For all i :
 - Assignment Project Exam Help
 - sends three packets that will reach router i on path towards destination <https://tutorcs.com>
 - router i will return packets to sender WeChat: cstutorcs
 - sender times interval between transmission and reply.

“Real” Internet delays, routes

- C. Processing, queuing, transmission, propagation
- D. Queuing, processing, propagation, transmission

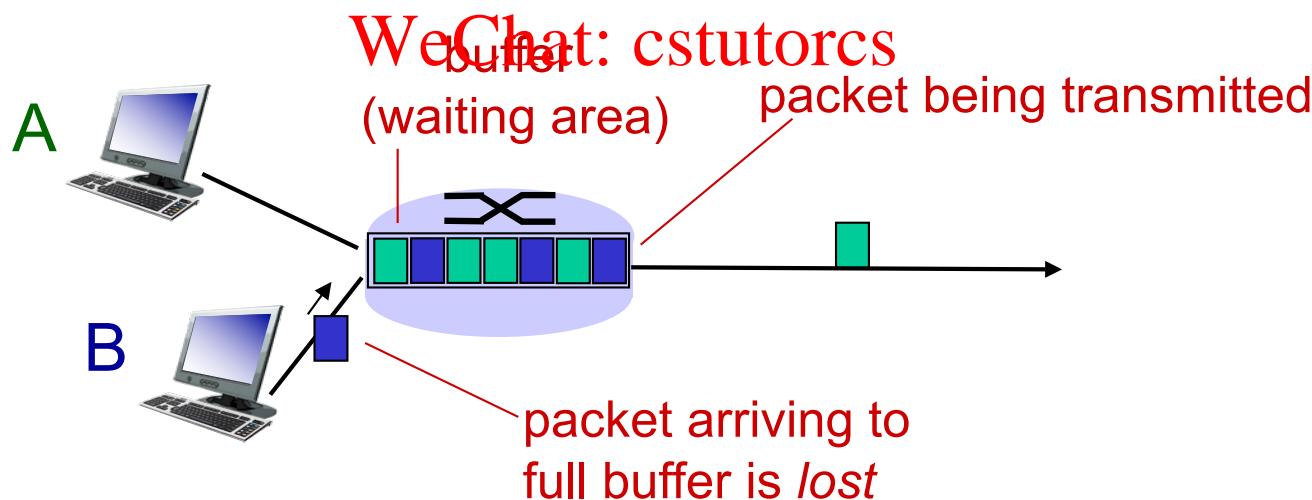

Answer: C

Open a browser and type: www.zetings.com/salil

Packet loss

- ❖ queue (aka buffer) preceding link in buffer has finite capacity
- ❖ packet arriving to full queue dropped (aka lost)
- ❖ lost packet ~~Assignment Project Exam Help~~

<https://tutorcs.com>

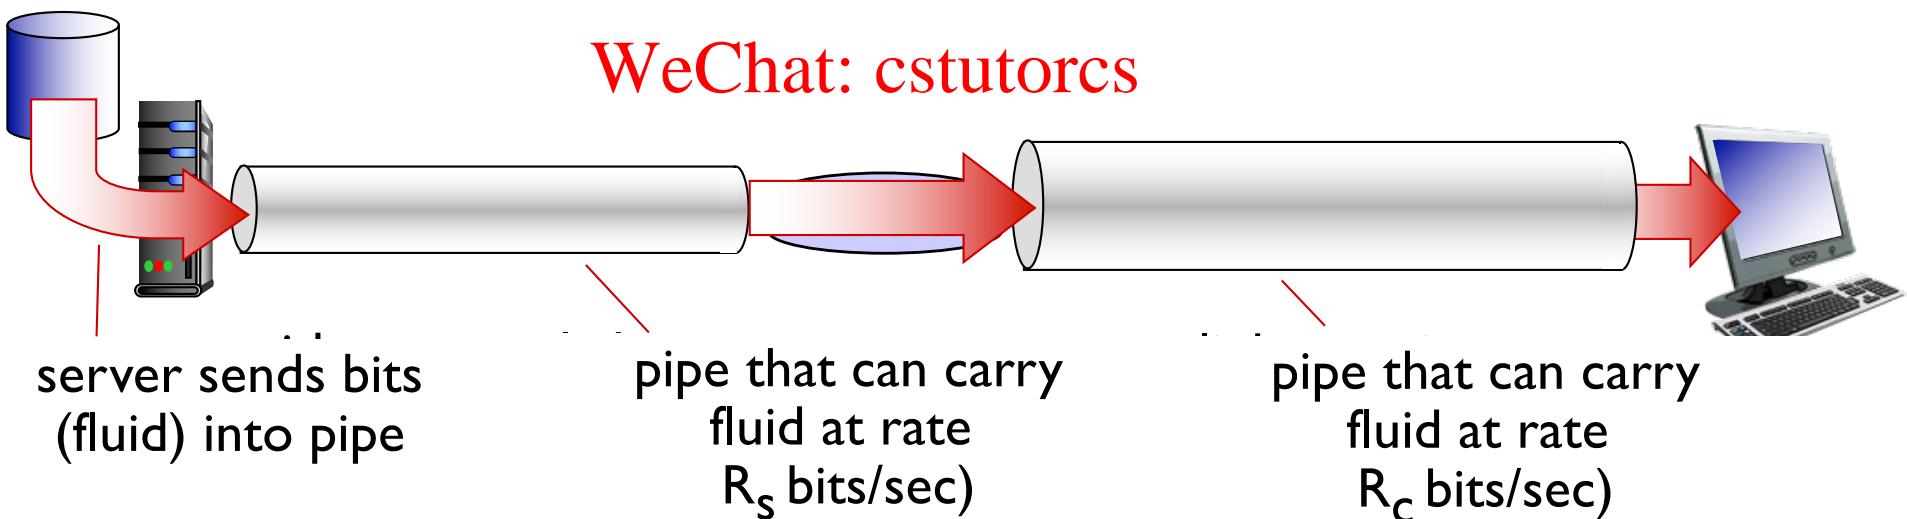

Throughput

- ❖ *throughput*: rate (bits/time unit) at which bits transferred between sender/receiver
 - *instantaneous*: rate at given point in time
 - *average*: ~~Assignment Project Exam Help~~

WeChat: cstutorcs

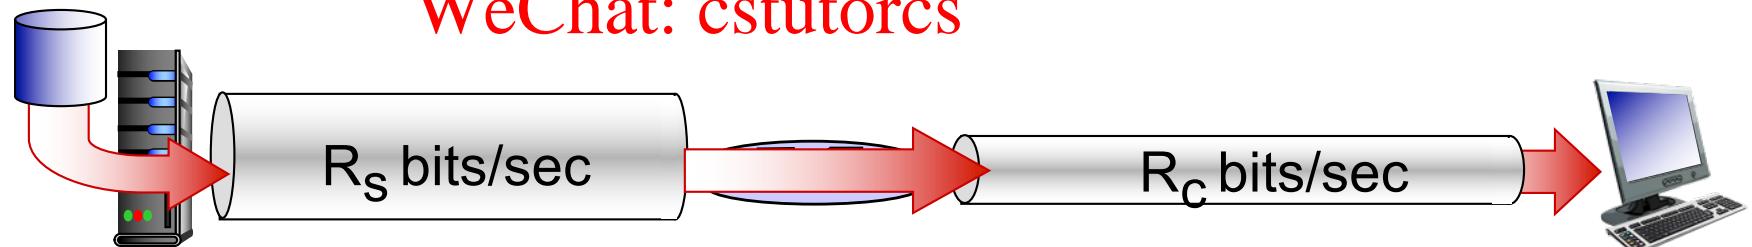

Throughput (more)

- ❖ $R_s < R_c$ What is average end-end throughput?

- ❖ $R_s > R_c$ What is average end-end throughput?
https://tutorcs.com
WeChat: cstutorcs

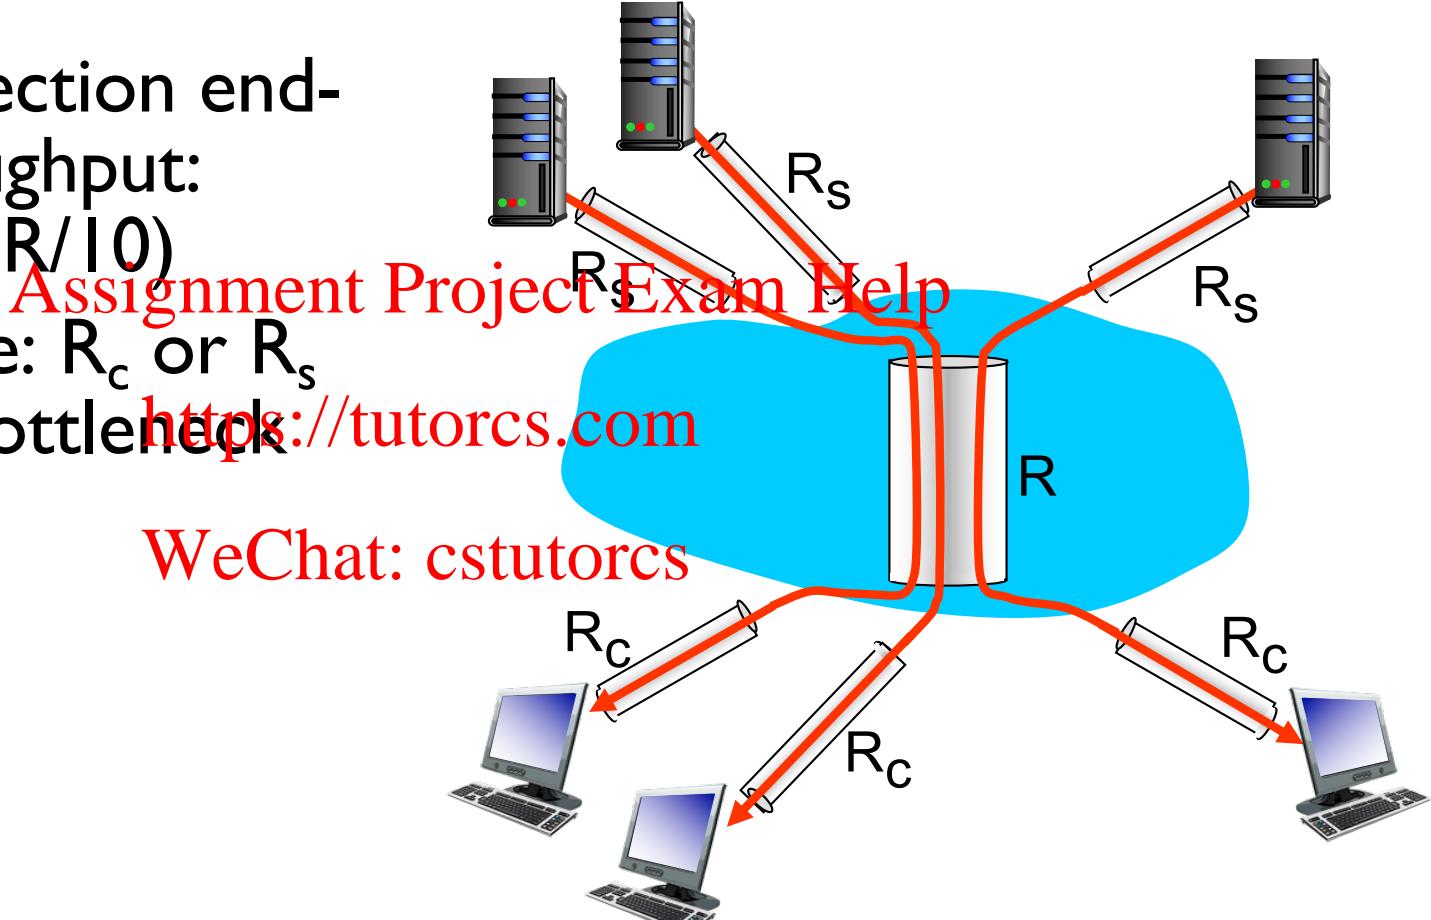

bottleneck link

link on end-end path that constrains end-end throughput

Throughput: Internet scenario

- ❖ per-connection end-end throughput:
 $\min(R_c, R_s, R/10)$
- ❖ in practice: R_c or R_s is often bottleneck

10 connections (fairly) share
backbone bottleneck link R bits/sec

Introduction: summary

covered a “ton” of material!

- ❖ Internet overview
- ❖ what’s a protocol?
- ❖ network edge, core, access network
 - packet-switching versus circuit-switching
 - Internet structure
- ❖ performance: loss, delay, throughput
- ❖ **Next Week**
 - Protocol layers, service models
 - Application Layer
