WeChat: cstutorcs

Transport Layer Part 1

Reading Guide: Chapter 3, Sections 3.1 – 3.4

Transport Layer

our goals:

- understand
 learn about Internet
 principles behind
 transport layer protocols:
 transport layer
 UDP: connectionless
 services:
 https://tutorcs.com/sport
 - multiplexing,
 demultiplexingWeChat: cstutoresiable transport
 - reliable data transfer
 - flow control
 - congestion control

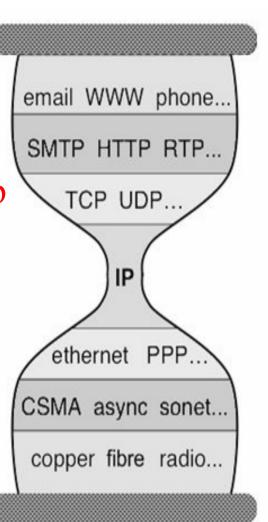

Transport Layer Outline

3.1 transport-layer services

- 3.5 connection-oriented transport: TCP
- 3.2 multiplexing and Project Exam Help demultiplexing reliable data transfer demultiplexing
- 3.3 connectionlesstps://tutorcs.comflow control transport: Uppechat: cstutores connection management principles of reliable 3.6 principles of congestion
- 3.4 principles of reliable data transfer
- control
- 3.7 TCP congestion control

Transport layer

- Moving "down" a layer
- Current perspective:
 - Application layer is the boss..... Exam Help
 - Transport layer usually executing within the OS Kernel
 - The network layer is equirated standard !!

Network layer (some context)

- What it does: finds paths through network
 - Routing from one end host to another
- What it doesn's Project Exam Help
 - Reliable transferttibes/tuefforts delivery"

 - Guarantee paths
 Arbitrate transfer rates
- For now, think of the network layer as giving us an "API" with one function: sendtohost(data, host)
 - Promise: the data will go to that (usually!!)

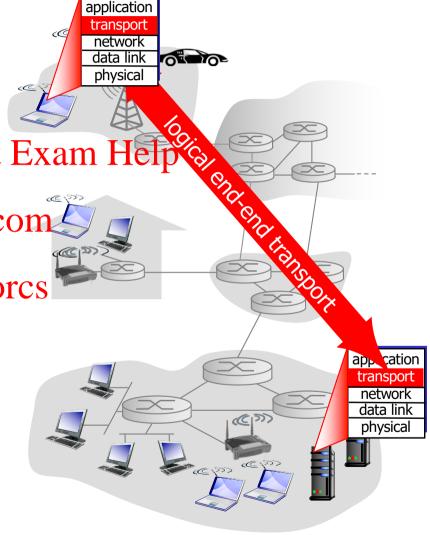

Transport services and protocols

 provide logical communication between app processes running on different hosts

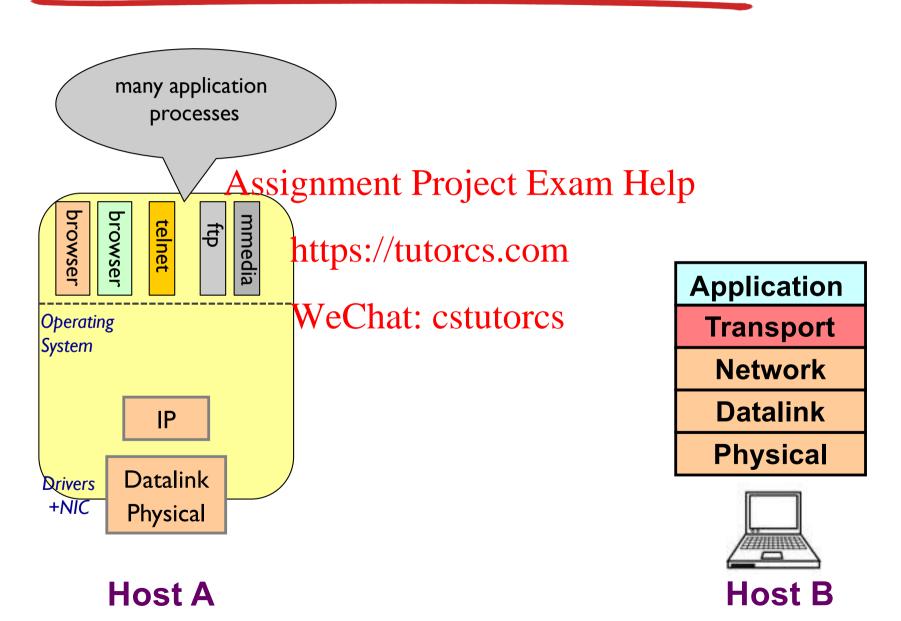

transport protociols mentin Project Exam Helps end systems

 sender side: breaks apputorcs.com messages into segments, passes to network layer cstutorcs

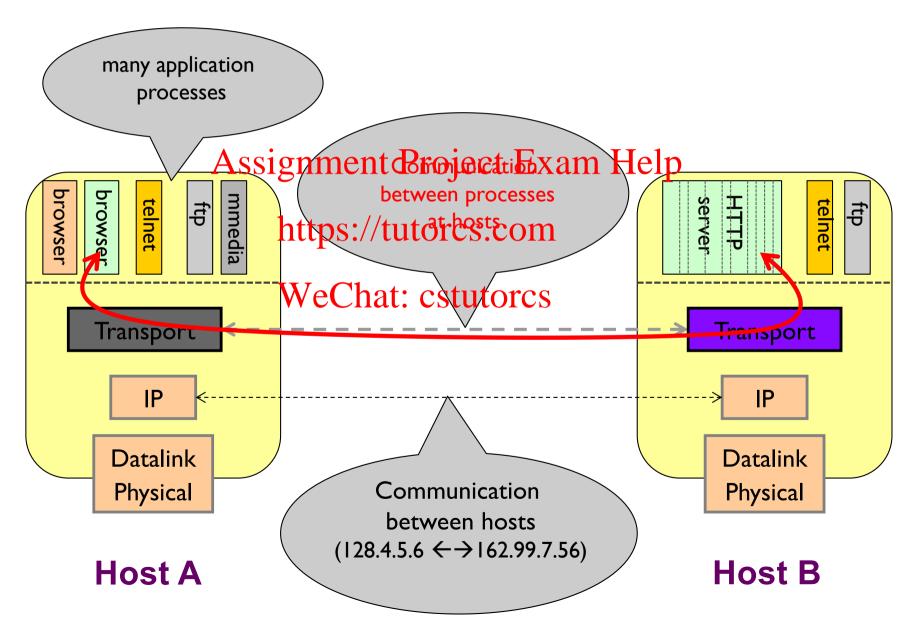

- receiver side: reassembles segments into messages, passes to app layer
- Exports services to application that network layer does not provide

Why a transport layer?

Why a transport layer?

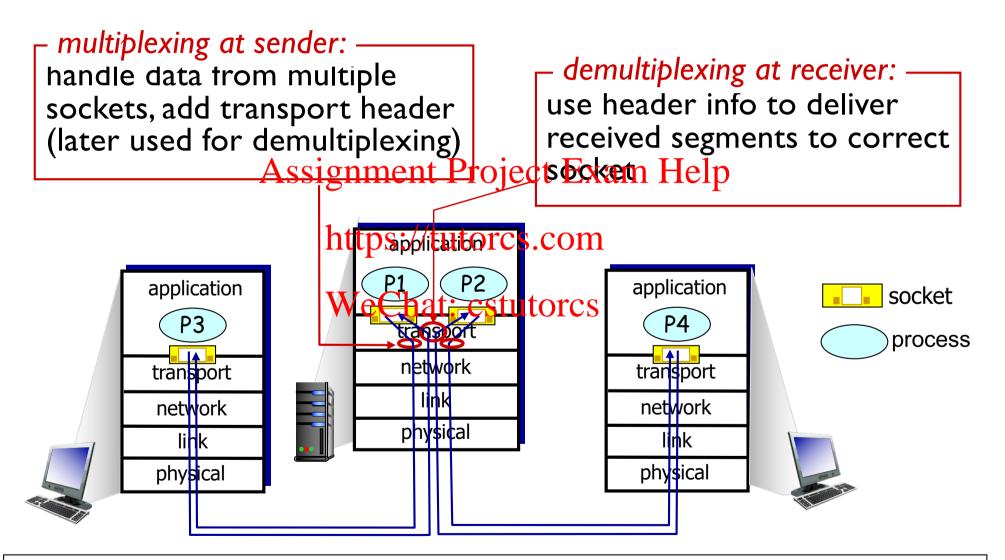

Transport Layer Outline

3.1 transport-layer services

- 3.5 connection-oriented transport: TCP
- 3.2 multiplexing and Project Exam Help demultiplexing reliable data transfer
- 3.3 connectionlesstps://tutorcs.comflow control transport: Uppechat: cstutores connection management principles of reliable 3.6 principles of congestion
- 3.4 principles of reliable data transfer
- control
- 3.7 TCP congestion control

Multiplexing/demultiplexing

Note: The network is a shared resource. It does not care about your applications, sockets, etc.

Connectionless demultiplexing

* recall: created socket has host-local port #:

DatagramSocket mySocket1

* recall: when creating datagram to send into UDP socket, must specify

= new Datagramsgickentent Project Exam Helpon IP address

https://tutorcs.com destination port #

* when host receives Cha segment:

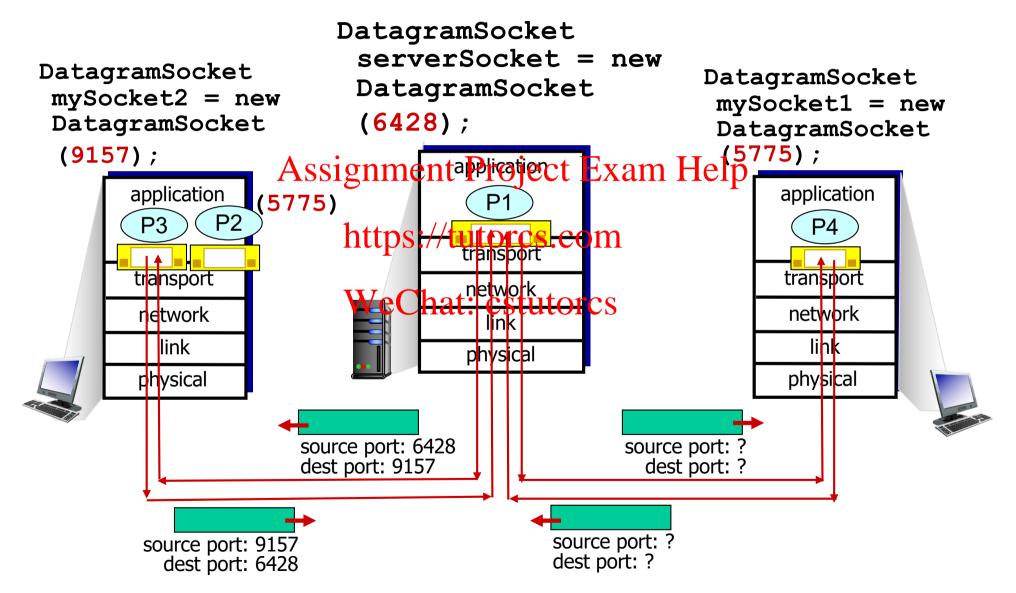

> checks destination port # in segment

directs UDP segment to socket with that port #

stutores datagrams with same dest. port #, but different source IP addresses and/or source port numbers will be directed to same socket at dest

Connectionless demux: example

Connection-oriented demux

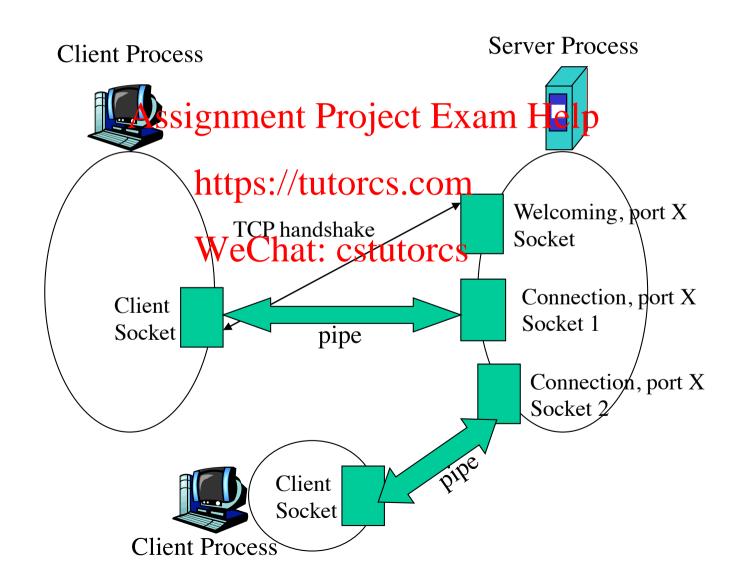

- TCP socket identified by 4-tuple:
 - source IP address Sockets:
 Assignment Project Exam Help
 each socket identified by

 - dest IP addresshttps://tutorcs.coiffs own 4-tuple
 - dest port number WeChat: cstutofferent sockets for
- demux: receiver uses all four values to direct segment to appropriate socket

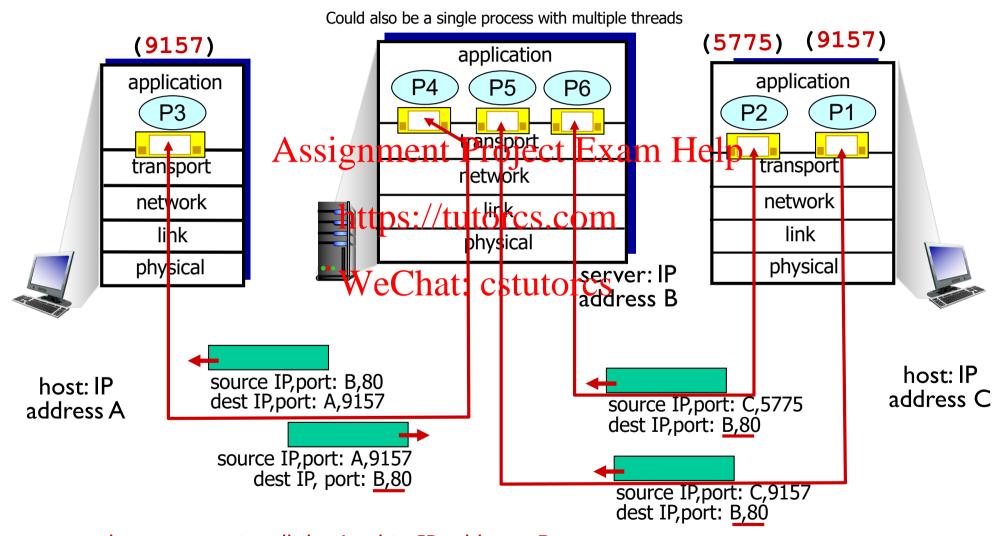

server host may support many simultaneous TCP

- each connecting client
 - non-persistent HTTP will have different socket for each request

Revisiting TCP Sockets

Connection-oriented demux: example

three segments, all destined to IP address: B, dest port: 80 are demultiplexed to *different* sockets

May I scan your ports?

http://netsecurity.about.com/cs/hackertools/a/aa121303.htm

- Servers wait at open ports for client requests
- Hackers often perform port scans to determine open, closed and unreachable ports on candidate victims

 Assignment Project Exam Help

 Several ports are well-known
- - <1024 are reserved for well-known apps</p>
 - Other apps also use known ports
 - MS SQL serve Wicks hat: 1 & Strutdpics
 - Sun Network File System (NFS) 2049 (tcp/udp)
- Hackers can exploit known flaws with these known apps
 - Example: Slammer worm exploited buffer overflow flaw in the SQL server
- How do you scan ports?
 - Nmap, Superscan, etc

http://www.auditmypc.com/

https://www.grc.com/shieldsup

Quiz: UDP Sockets

* Suppose we use UDP instead of TCP for communicating with a web server where all requests and responses fit in a single UDP segment. Suppose 100 clients are simultaneously communicating try ith this cyclmserver. How many sockets are respectively active at the server and each client? WeChat: cstutorcs

- a) 1, 1
- b) 2, 1
- c) 200, 2
- d) 100, 1
- e) 101, 1

ANSWER: a)

www.zeetings.com/salil

Quiz: TCP Sockets

* Suppose 100 clients are simultaneously communicating with a traditional HTTP/TCP web server. How many sockets are active respectively at the server and each client?

https://tutorcs.com

WeChat: cstutorcs

- a) 1, 1
- b) 2, 1
- c) 200, 2
- d) 100, 1
- e) 101, 1

ANSWER: d) or e) depending on whether a welcoming socket is counted as a socket

Quiz: TCP Sockets

* Suppose 100 clients are simultaneously communicating with a traditional HTTP/TCP web server. Do all the TCP sockets at the server have the same server-side port number?

https://tutorcs.com

- a) Yes
- b) No

WeChat: cstutorcs

ANSWER: a)

Transport Layer Outline

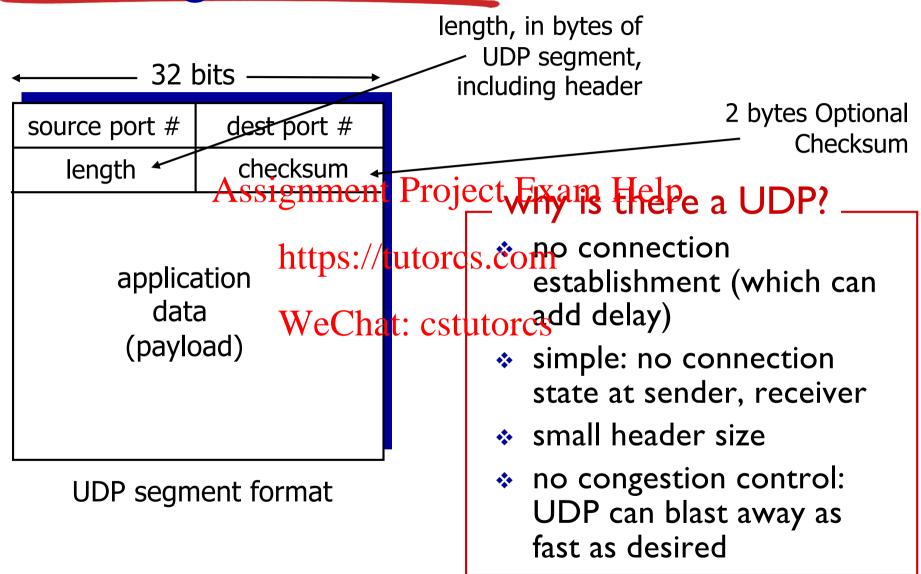

3.1 transport-layer services

- 3.5 connection-oriented transport: TCP
- 3.2 multiplexing and Project Exam Help reliable data transfer demultiplexing
- 3.3 connectionlesstps://tutorcs.comflow control transport: Upechat: cstutores connection management principles of reliable 3.6 principles of congestion
- 3.4 principles of reliable data transfer
- control
- 3.7 TCP congestion control

UDP: User Datagram Protocol [RFC 768]

- "no frills," "bare bones" Internet transport protocol
- "best effort" service, UDP segments may be:
 - lost
 - delivered autsigfrandant transpect Exam Help
- connectionless: https://tutorcs.com
 - no handshaking between UDP sender, receiver
 - each UDP segment handled independently of others

UDP: segment header

UDP checksum

- Goal: detect "errors" (e.g., flipped bits) in transmitted segment
 - Router memory errors
 - Driver bussignment Project Exam Help
 - Electromagnetic interference

sender:

https://tutorcs.com. receiver:

- segmen We Contenes, tutor And all the received including header fields, as together as 16-bit integers sequence of 16-bit integers
- checksum: addition (one's complement sum) of segment contents
- sender puts checksum value into UDP checksum field

- Add that to the checksum
- If the result is not | | | | | IIII IIII IIII, there are errors!

Internet checksum: example

example: add two 16-bit integers

wraparound 1 1 0 1 https://tutorco.dom1 0 1 1

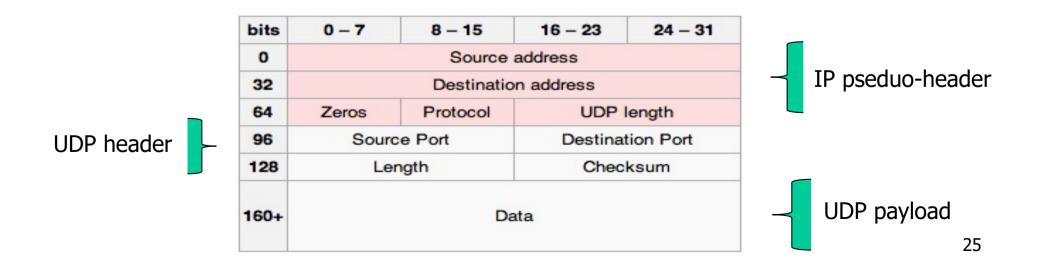

```
sum 1 0 1 We Chat: cstutores 1 1 0 0 checksum 0 1 0 0 0 1 0 0 0 1 0 0 0 1 1
```

Note: when adding numbers, a carryout from the most significant bit needs to be added to the result

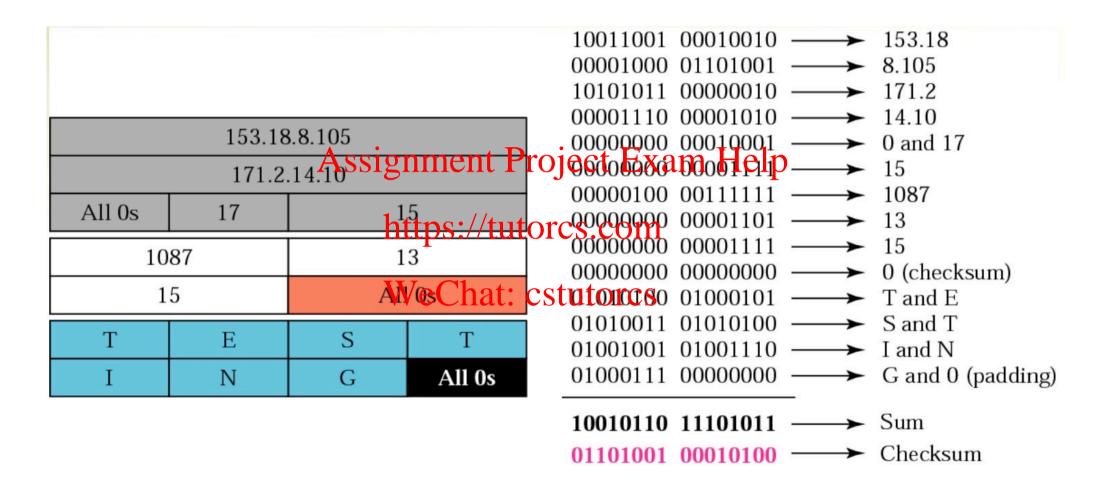

UDP: Checksum

- Checksum is the 16-bit one's complement of the one's complement sum of a pseudo header of information from the IP header, the UDP header, and the data, padded with zero octets at the end (if necessary) to make a multiple of two octets.

 Assignment Project Exam Help
- Checksum header, data and pre-pended IP pseudo-header (some fields from the IP header).com
- > But the header contains the checksum itself?

Checksum: example

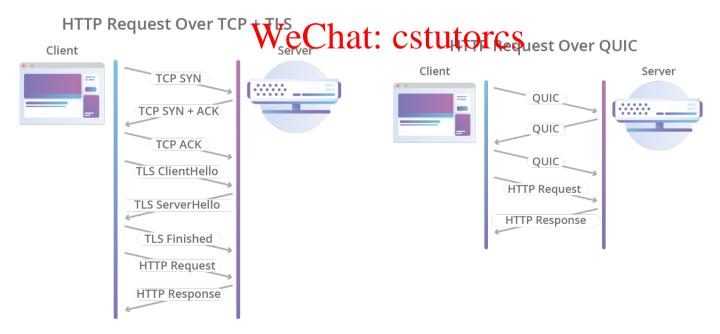

Note: TCP Checksum computation is exactly similar

UDP Applications

- Latency sensitive/time critical
 - Quick request/response (DNS, DHCP)
 - * Network management (SNMP) Exam Help
 - Routing updates (RIP)
 - Voice/video chateps://tutorcs.com
 - Gaming (especially FPS)
 weChat: cstutorcs
- Error correction managed by periodic messages

QUIC: Quick UDP Internet Connections

- Core idea: HTTP/2 over UDP
 - Faster connection establishment
 - Overcomes HoL blocking due to lost packets
 - Improved congestion control Assignment Project Exam Help
 - Forward error correction
 - Connection migtation tutores.com

Transport Layer Outline

3.1 transport-layer services

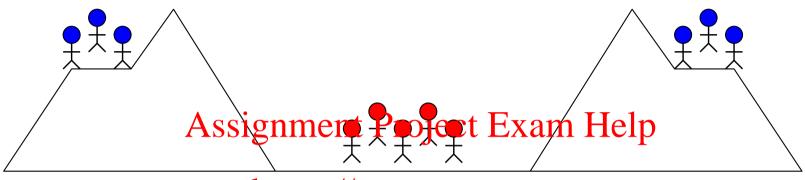

- 3.5 connection-oriented transport: TCP
- 3.2 multiplexing and Project Exam Help demultiplexing reliable data transfer demultiplexing
- 3.3 connectionlesstps://tutorcs.comflow control transport: UNP connection management connection management principles of reliable 3.6 principles of congestion
- 3.4 principles of reliable data transfer
- control
- 3.7 TCP congestion control

Reliable Transport

- In a perfect world, reliable transport is easy
- All the bad things best-effort can do Assignment Project Exam Help
 a packet is corrupted (bit errors)

 - a packet is lost www.tutorcs.com
 - a packet is delayed hwhy? stutores
 - packets are reordered (why?)
 - a packet is duplicated (why?)

The Two Generals Problem

- https://tutorcs.com
 Two army divisions (blue) surround enemy (red)
 - Each division led Charge net at orcs
 - Both must agree when to simultaneously attack
 - If either side attacks alone, defeat
- Generals can only communicate via messengers
 - Messengers may get captured (unreliable channel)

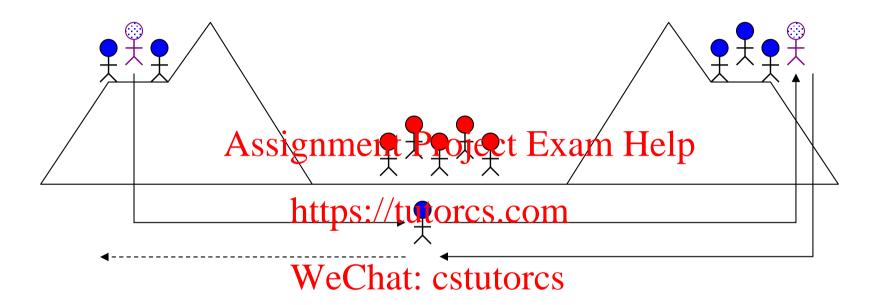

The Two Generals Problem

WeChat: cstutorcs

- How to coordinate?
 - Send messenger: "Attack at dawn"
 - What if messenger doesn't make it?

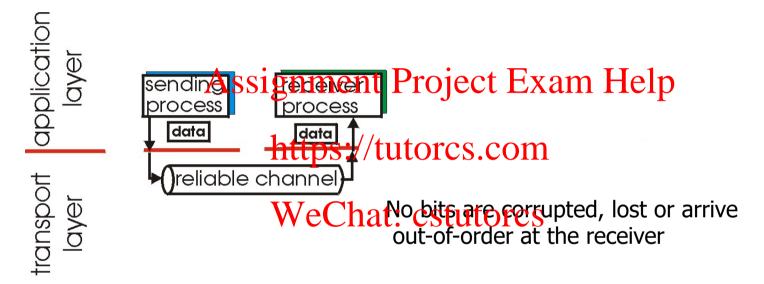

The Two Generals Problem

- How to be sure messenger made it?
 - Send acknowledgement: "We received message"

Principles of reliable data transfer

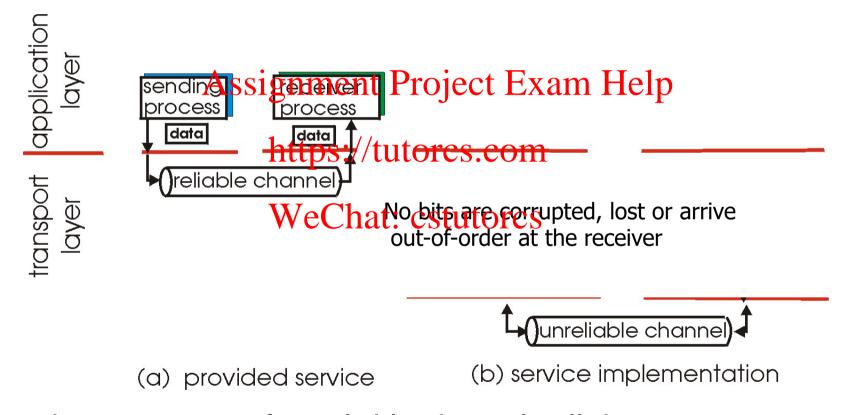

- important in application, transport, link layers
 - top-10 list of important networking topics!

- (a) provided service
- characteristics of unreliable channel will determine complexity of reliable data transfer protocol (rdt)

Principles of reliable data transfer

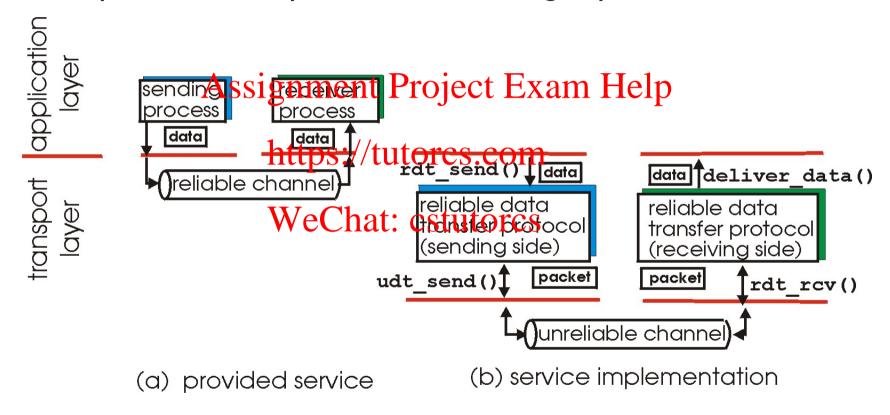

- important in application, transport, link layers
 - top-I0 list of important networking topics!

 characteristics of unreliable channel will determine complexity of reliable data transfer protocol (rdt)

Principles of reliable data transfer

- important in application, transport, link layers
 - top-10 list of important networking topics!

 characteristics of unreliable channel will determine complexity of reliable data transfer protocol (rdt)

Reliable data transfer: getting started We'll:

- > Incrementally develop sender, receiver sides of reliable data transfer protocol (rdt)
- Consider only unidirectional data transfer
 but control info will flow on both airections!
- > Channel will nature outgrasses

WeChat: cstutorcs

stop and wait sender sends one packet, then waits for receiver response

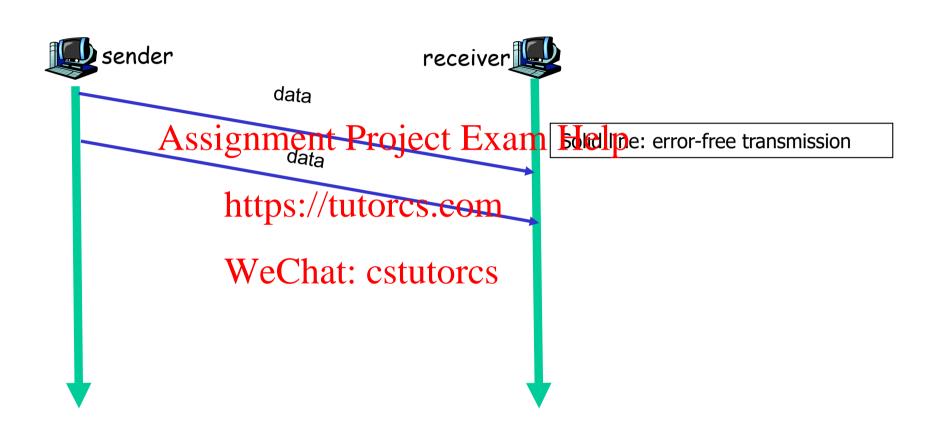

rdt 1.0: reliable transfer over a reliable channel

- Underlying channel perfectly reliable
 - no bit errors
 - no loss of packets
- > Transport laysiguloes in Orthing Exam Help

https://tutorcs.com

WeChat: cstutorcs

Global Picture of rdt1.0

rdt2.0: channel with bit errors

- underlying channel may flip bits in packet
 - checksum to detect bit errors
- the question: how to recover from errors:

Assignment Project Exam Help

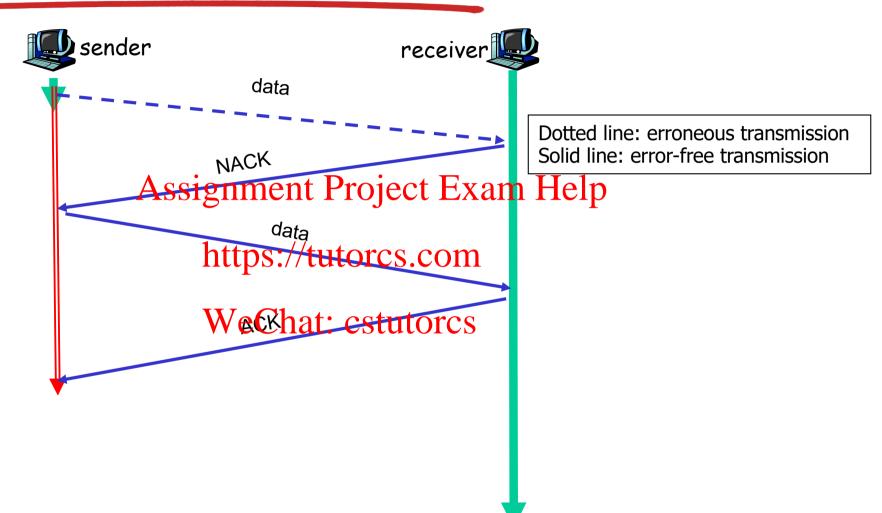

https://tutorcs.com

How do Warhariscrettover from "errors" during conversation?

rdt2.0: channel with bit errors

- underlying channel may flip bits in packet
 - checksum to detect bit errors
- the question: how to recover from errors:
 - acknowledgestents (Att Rs) jece was plicitly tells sender that pkt received OK
 - negative acknowledgements (NAKs): receiver explicitly tells sender that pkt had errors
 - sender retransmits pkt on receipt of NAK
- new mechanisms in rdt2.0 (beyond rdt1.0):
 - error detection
 - feedback: control msgs (ACK,NAK) from receiver to sender
 - retransmission

Global Picture of rdt2.0

rdt2.0 has a fatal flaw!

what happens if ACK/NAK corrupted?

handling duplicates:

- sender retransmits
 sender doesn't know current pkt if ACK/NAK what happened agnment Project Exam Help corrupted receiver!
- * can't just retransmit. * can't just retransmit. * number to each pkt possible duplicate WeChat: cstatoeceiver discards (doesn't deliver up) duplicate pkt

stop and wait sender sends one packet, then waits for receiver response

rdt2.1: discussion

sender:

- seq # added to pkt
- * two seq. #'s (0,1) will packet is duplicate suffice. Why? packet is duplicate suffice. Why? xam Help rare indicates whether
- * must check if required torcs.com or I is expected pkt
- twice as much state
 - state must "remember" whether 'expected" pkt should have seq # of 0 or 1

receiver:

ACK/NAK corrupted
. WeChat: cstatootse: receiver can not know if its last ACK/NAK received

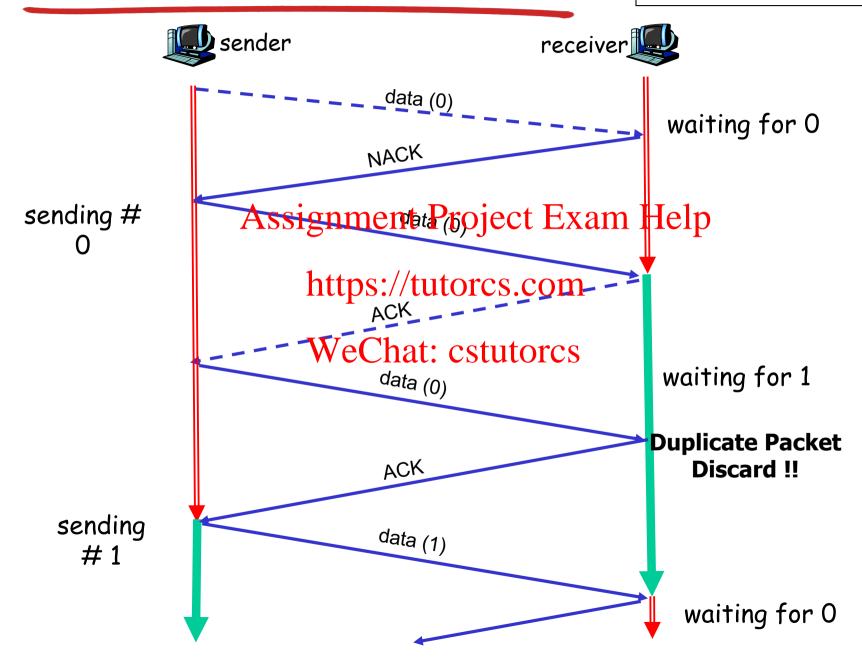

OK at sender

must check if received

New Measures: Sequence Numbers, Checksum for ACK/NACK, **Duplicate detection**

Another Look at rdt2.1

Dotted line: erroneous transmission Solid line: error-free transmission

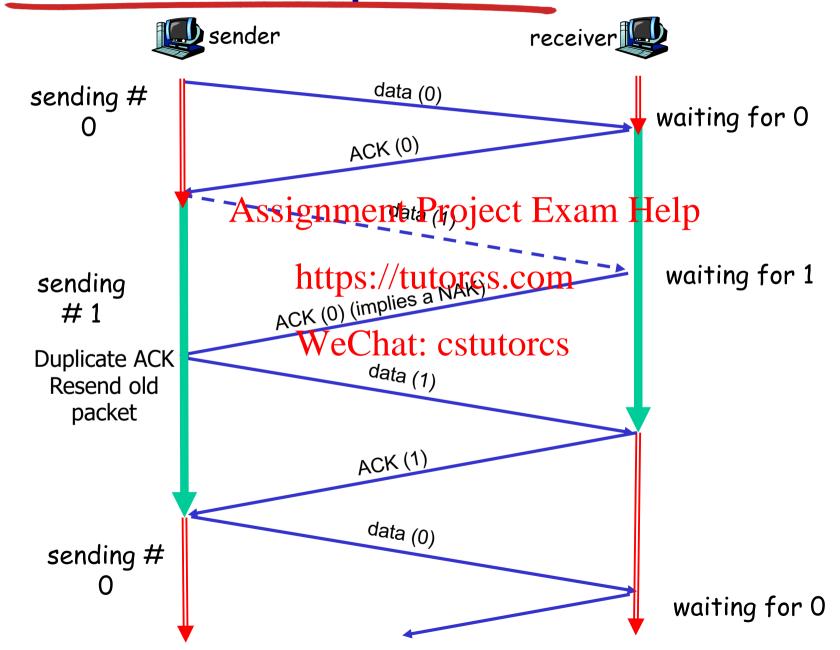

rdt2.2: a NAK-free protocol

- same functionality as rdt2.1, using ACKs only
- * instead of NAK, receiver sends ACK for last pkt received OKssignment Project Exam Help
 - receiver must explicitly include seq # of pkt being ACKed
- * duplicate ACK attrender results in same action as NAK: retransmit current pkt

rdt2.2: Example

Dotted line: erroneous transmission Solid line: error-free transmission

rdt3.0: channels with errors and loss

new assumption:

underlying channel can

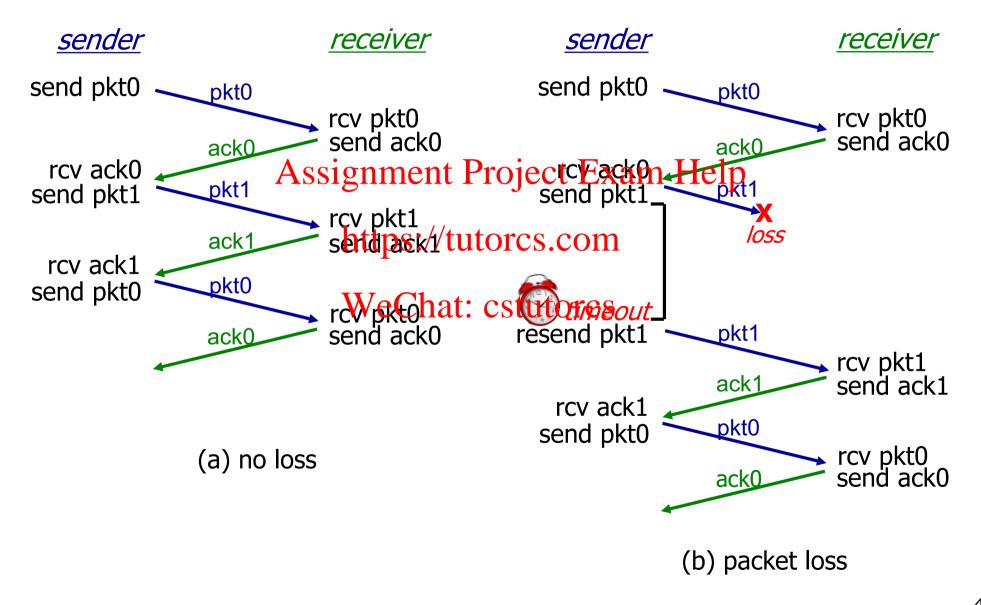

approach: sender waits reasonable" amount of also loose packets time for ACK (data, ACKs) time for ACK * retransmits if no ACK

• checksum, seqt#ps://tutorcs.com/ved in this time if pkt (or ACK) just delayed ACKs, retransmissions will be of help We Chat: cstutores lost):

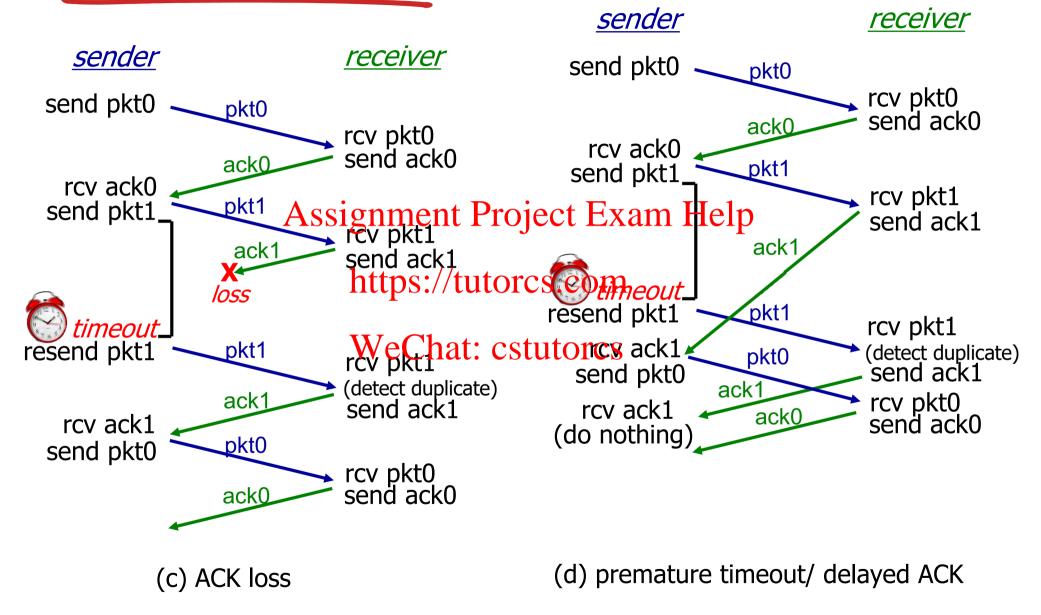

not enough

- retransmission will be duplicate, but seq. #'s already handles this
- receiver must specify seq # of pkt being ACKed
- requires countdown timer
- No retransmission on duplicate ACKs

rdt3.0 in action

rdt3.0 in action

Quiz: Reliable Data Transfer

* Which of the following are needed for reliable data transfer with only packet corruption (and no loss or reordering)? Use only as much as is strictly as a signment Project Exam Help needed.

ANSWER: d)

https://tutorcs.com

- Checksums WeChat: cstutorcs Checksums, ACKs, NACKs
- Checksums, ACKs
- Checksums, ACKs, sequence numbers
- Checksums, ACKs, NACKs, sequence numbers

Quiz: Reliable Data Transfer

- If packets (and ACKs and NACKs) could be lost which of the following is true of RDT 2.1 (or 2.2)?
 Assignment Project Exam Help
 - a) Reliable in-orthogodelittory is come achieved
 - b) The protocol will get stuck cstutores
 - c) The protocol will continue making progress but may skip delivering some messages

ANSWER: b)

www.zeetings.com/salil

Quiz: Reliable Data Transfer

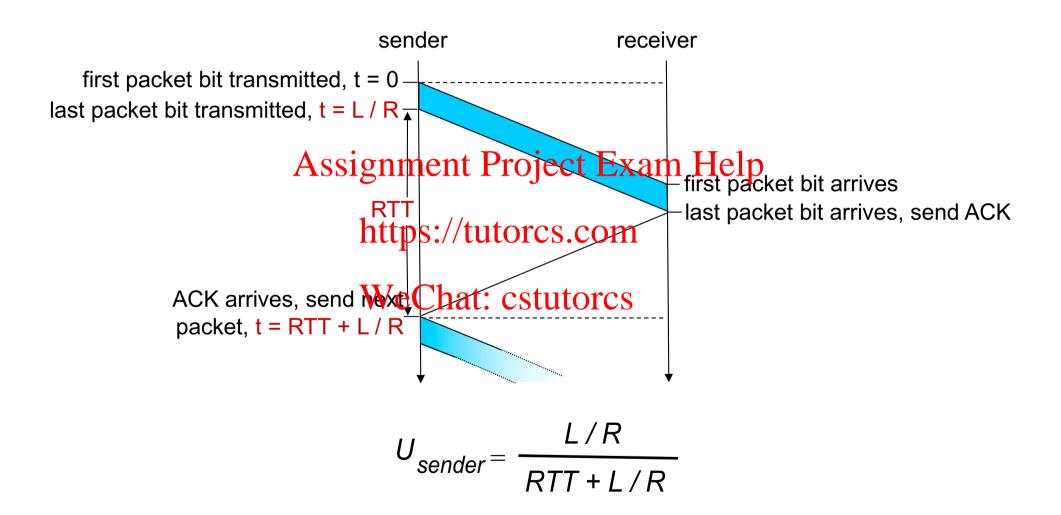

- * Which of the following are needed for reliable data transfer to handle packet corruption and loss? Use only as much as is strictly needed. Assignment Project Exam Help
 - a) Checksums, https://tutorcs.com
 - b) Checksums, ACKs, sequence numbers
 - c) Checksums, ACKs, timeouts
 - d) Checksums, ACKs, timeouts, sequence numbers
 - e) Checksums, ACKs, NACKs, timeouts, sequence numbers

www.zeetings.com/salil

ANSWER: d)

rdt3.0: stop-and-wait operation

Performance of rdt3.0

- > rdt3.0 is correct, but performance stinks
- > e.g.: I Gbps link, 8000 bit packet and 30msec RTT:

Assignment Project Exam Help
$$D_{trans} = \frac{2}{R} = \frac{8000 \, bits}{Ptubits second} = 8 \, microsecs$$

• U sender: utilization – fraction of time sender busy sending WeChat: cstutorcs

$$U_{\text{sender}} = \frac{L/R}{RTT + L/R} = \frac{.008}{30.008} = 0.00027$$

- RTT=30 msec, IKB pkt every 30.008 msec: 33kB/sec thruput over I Gbps link
- Network protocol limits use of physical resources!

Pipelined protocols

pipelining: sender allows multiple, "in-flight", yetto-be-acknowledged pkts

- range of sequence numbers must be increased
- buffering atsseptionend to be buffering atsseption and to be buffering at the buffering atsseption and to be buffering at the buffering atsseption and the buffering at the buffe

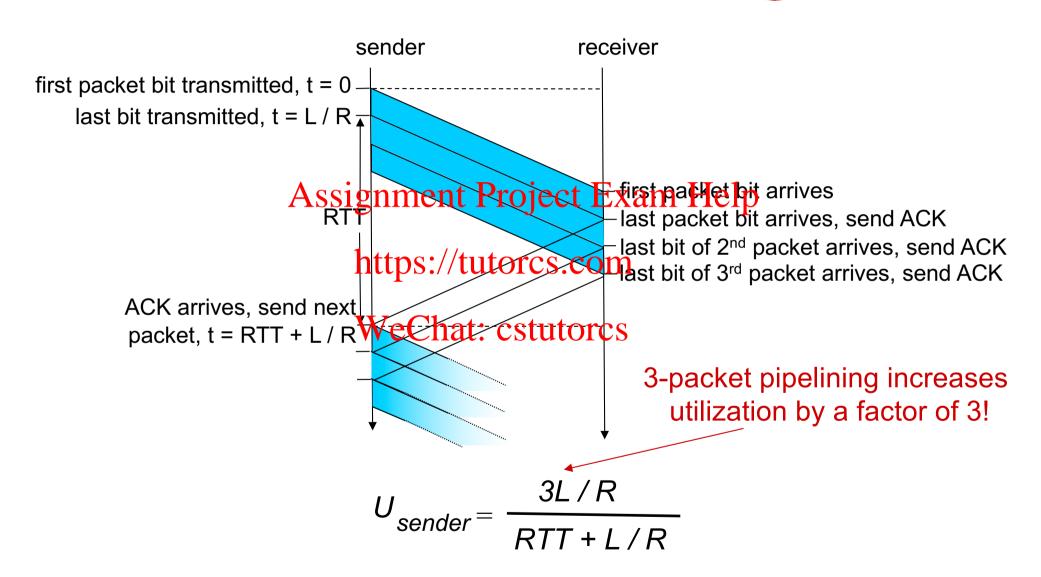

(a) a stop-and-wait protocol in operation

(b) a pipelined protocol in operation

two generic forms of pipelined (sliding window) protocols: go-Back-N, selective repeat

Pipelining: increased utilization

Pipelined protocols: overview

Go-Back-N:

Selective Repeat:

> Sender can have up to N unacked packets in pipeline

- Sender can have up to N unacked packets in pipeline
- Sender has single timer for Sender maintains timer for oldest unacked packet, when timer expires, retransmit unacked packets

 Assignment Project Exam Help Sender maintains timer for sender maintains timer for each unacked packet, when each unacked packet, when timer expires, retransmit only that unacked packet WeChat: cstutorcs
- There is no buffer available at Receiver, out of order packets are discarded
- > Receiver has buffer, can accept out of order packets

- Receiver only sends cumulative ack, doesn't ack new packet if there's a gap
- Receiver sends individual ack for each packet

Go-Back-N: sender

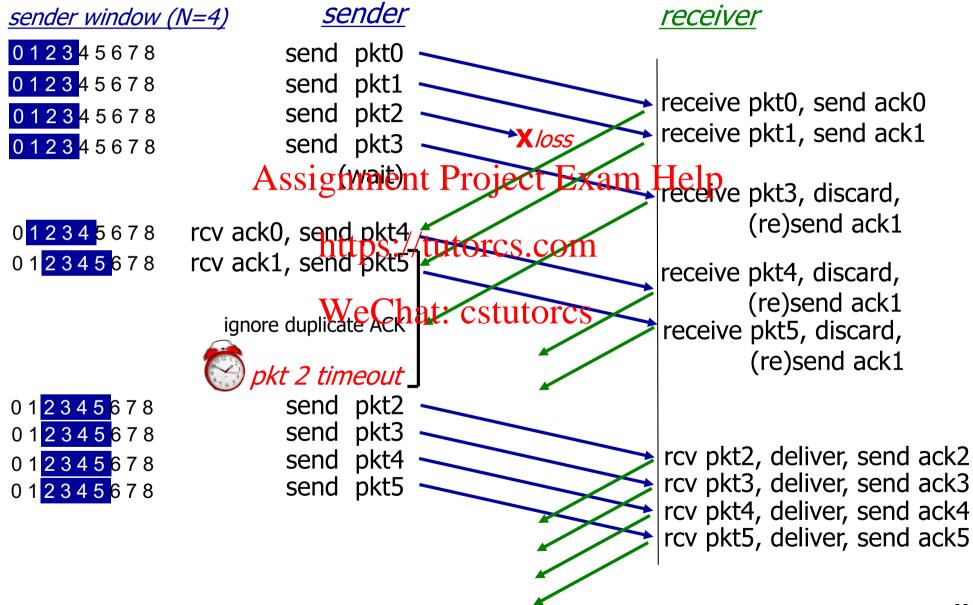

- k-bit seq # in pkt header
- * "window" of up to N, consecutive unack'ed pkts allowed

- ❖ ACK(n):ACKs all pkts up to, including seq # n "cumulative ACK"
 - may receive duplicate ACKs (see receiver)
- timer for oldest in-flight pkt
- timeout(n): retransmit packet n and all higher seq # pkts in window

Applets: http://media.pearsoncmg.com/aw/aw_kurose_network_2/applets/go-back-n/go-back-n.html http://www.ccs-labs.org/teaching/rn/animations/gbn_sr/

GBN in action

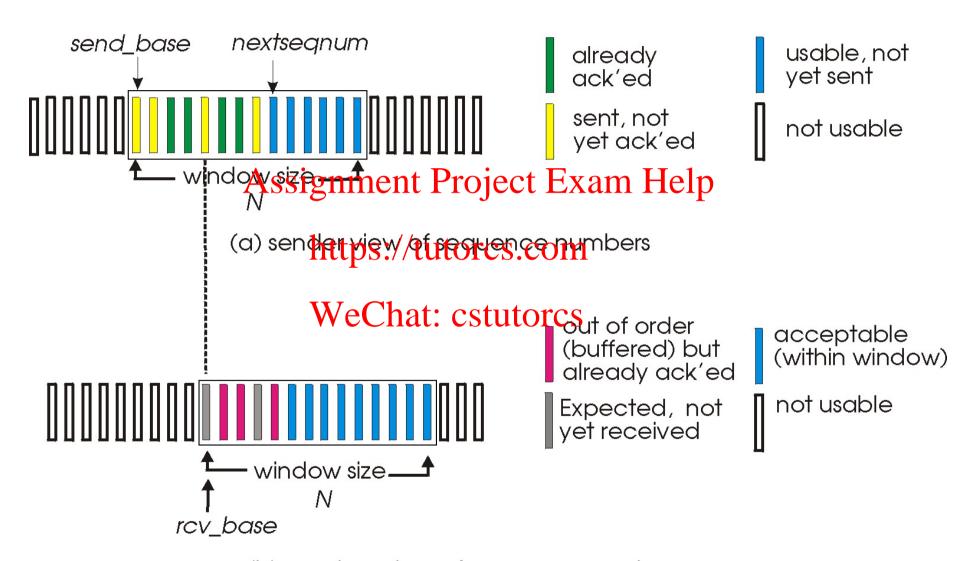

Selective repeat

- receiver individually acknowledges all correctly received pkts
 - buffers pkts, as needed, for eventual in-order delivery to upper Asycignment Project Exam Help
- sender only resends pkts for which ACK not received
 - sender timer Wreeabatur Att Kordspkt
- sender window
 - N consecutive seq #'s
 - limits seq #s of sent, unACKed pkts

Applet: http://media.pearsoncmg.com/aw/aw_kurose_network_3/applets/SelectRepeat/SR.html

Selective repeat: sender, receiver windows

(b) receiver view of sequence numbers

Selective repeat

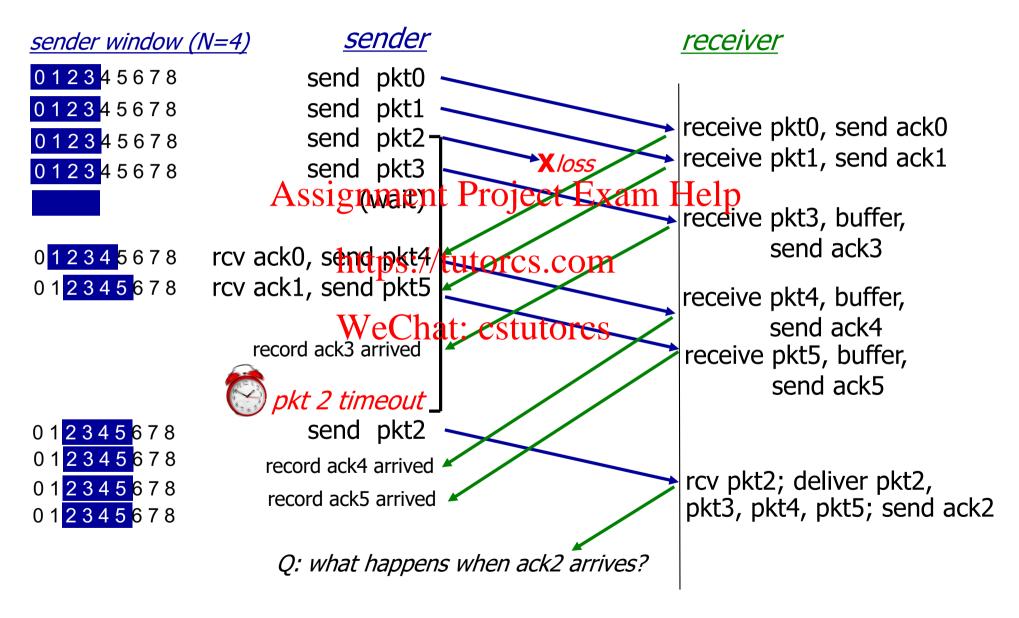

sender data from above:

if next available seq # in window, send pkt Assignment Project timeout(n):

- mark pkt n as received
- if n smallest unACKed pkt, advance window base to next unACKed seq #

receiver pkt n in [rcvbase, rcvbase+N-1] send ACK(n) out-of-order: buffer in-order: deliver (also * resend pkt n, restations intentors. comdeliver buffered, in-order pkts), advance window to ACK(n) in [sendbase,sendbase+N-I]: cstutorcsnext not-yet-received pkt pkt n in [rcvbase-N,rcvbase-I] ACK(n) otherwise: ignore

Selective repeat in action

Selective repeat: dilemma

example:

- seq #'s: 0, 1, 2, 3
- window size=3
- * receiver sees soignment Project Freder Help with seq number 0 difference in two scenarios! https://tutorcs.com/receiver can't see sender side.

 https://tutorcs.com/receiver behavior identical in both cases!

sender window

(after receipt)

0123012 _ pkt0

0123012 _ pkt1

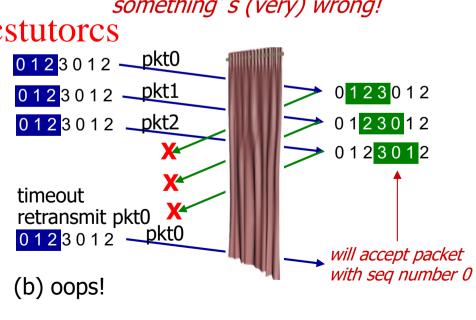

0123012 _pkt2

0 1 2 3 0 1 2 **pkt3**

0123012 🕊

- Q: what relationship between seq # size and window size to avoid problem in (b)?

A: Sender window size <= 1/2 of Sequence number space

receiver window

0123012

0123012

0123012

will accept packet

(after receipt)

Recap: components of a solution

- Checksums (for error detection)
- Timers (for loss detection)
- Acknowledgments
 - cumulative ssignment Project Exam Help
 - selective https://tutorcs.com
- Sequence numbers (duplicates, windows)
 Sliding Windows (for efficiency)
- Reliability protocols use the above to decide when and what to retransmit or acknowledge

Quiz: GBN, SR

- Which of the following is not true?
 - a) GBN usesignmulative jeckles and individual ACKs
 - b) Both GBN antiper/tisecime counto address packet loss
 - c) GBN maintains a separate timer for each outstanding packet we Chat: cstutorcs
 - d) SR maintains a separate timer for each outstanding packet
 - e) Neither GBN nor SR use NACKs

www.zeetings.com/salil

ANSWER: c)

Quiz: GBN, SR

 Suppose a receiver that has received all packets up to and including sequence number 24 and next receives packet 27 and 28. In response, what are the sequence numbers in the ACK(s) sent out by the GBN and Spreceiveresespectively?

a) [27, 28], [28, 28] WeChat: cstutorcs

ANSWER: b)

- b) [24, 24], [27, 28]
- c) [27, 28], [27, 28]
- d) [25, 25], [25, 25]
- e) [nothing], [27, 28]
